

Check MD5 code, check MD5 code of any file on the computer quickly and accurately

Check MD5 code, check MD5 code of any file on the computer quickly and accurately. When downloading files from the Internet to a computer, we often check the MD5 code to check the integrity of the file, make sure that the file is safe, as original as the website.

When downloading files from the Internet to a computer, we often check the MD5 code to check the integrity of the file, make sure that the file is safe and original as the website provides. So how do we check the MD5 code?

Please follow the article below to know how to quickly check the MD5 code of any file on your computer.

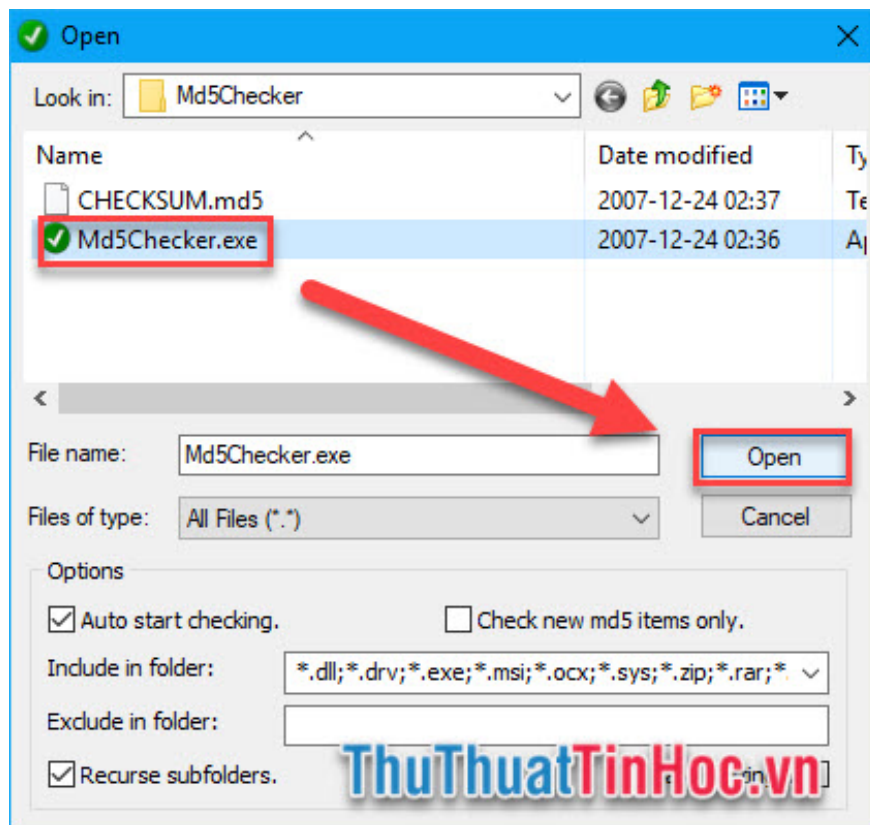

What is the MD5 code?

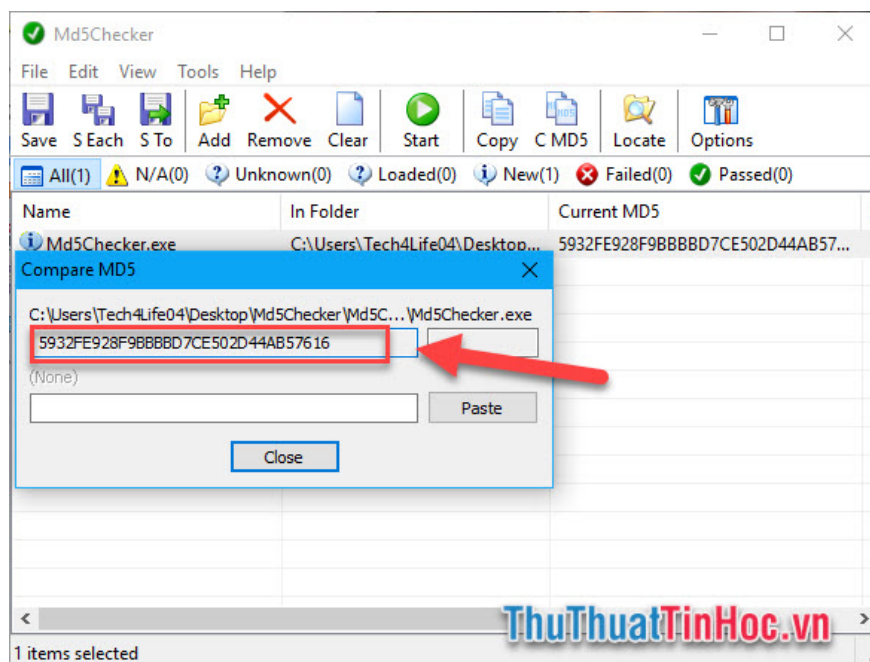

The MD5 (Message Digest algorithm 5) code is a commonly used cryptographic function with a 128-bit value.

MD5 code is generated from any input string, so it is often used to check the integrity of the file, showing that the file has not been changed.

If the file you downloaded has a good MD5 code with the MD5 listed on the page provided, it is likely that the file you downloaded was incomplete, or modified (insert trojans, viruses, .) compared to the original version. fake supply.

Step 3: At the output, you will see the MD5 code stream of the file, compare it with the code line provided by the author:

MD5 algorithm has been employed in a wide variety of security applications. Whenever a file is transferred, it should be sent with MD5 signature to verify data integrity by comparing the MD5 signature of transferred file to the authentic signature.

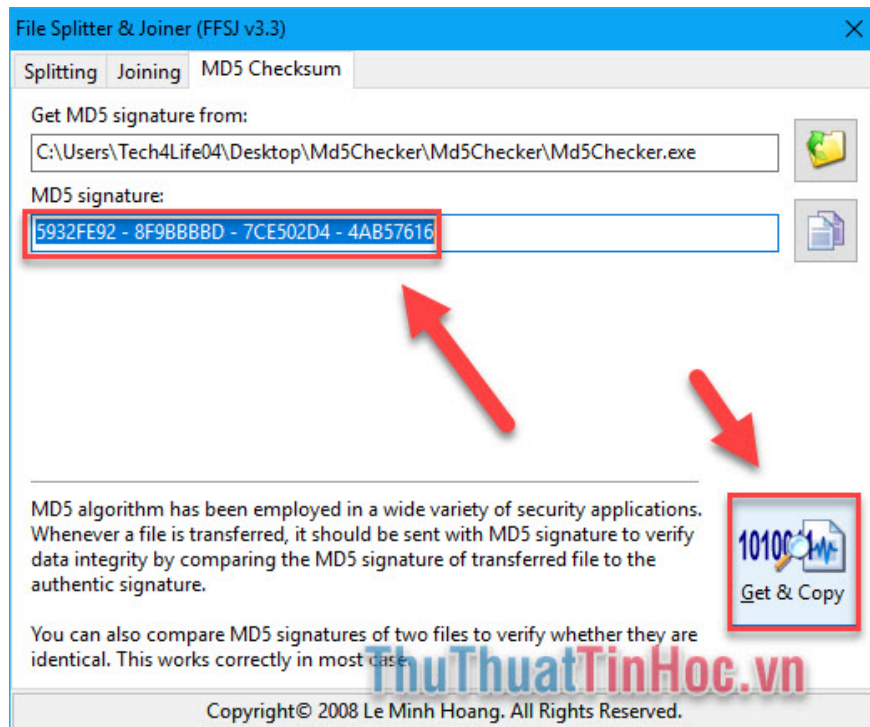

You can also compare MD5 signatures of two files to verify whether they are identical. This works correctly in most case.

Step 3 : Select the file you want to check MD5 and click **Open**.

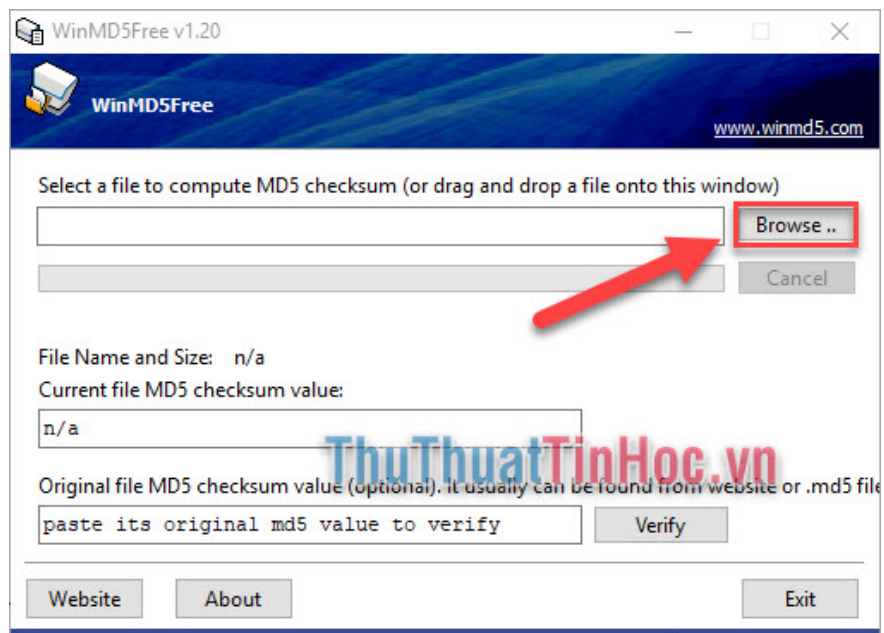

Step 4 : Click **Get & Copy** , you will receive the MD5 code line that the software detects.

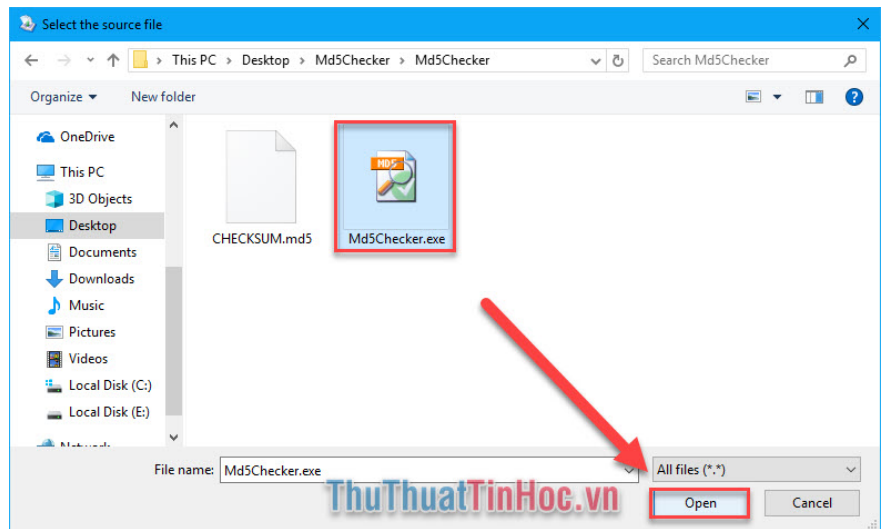

3. Checking MD5 with the extremely light WinMD5Free software

Step 1 : Download and install the WinMD5Free software.

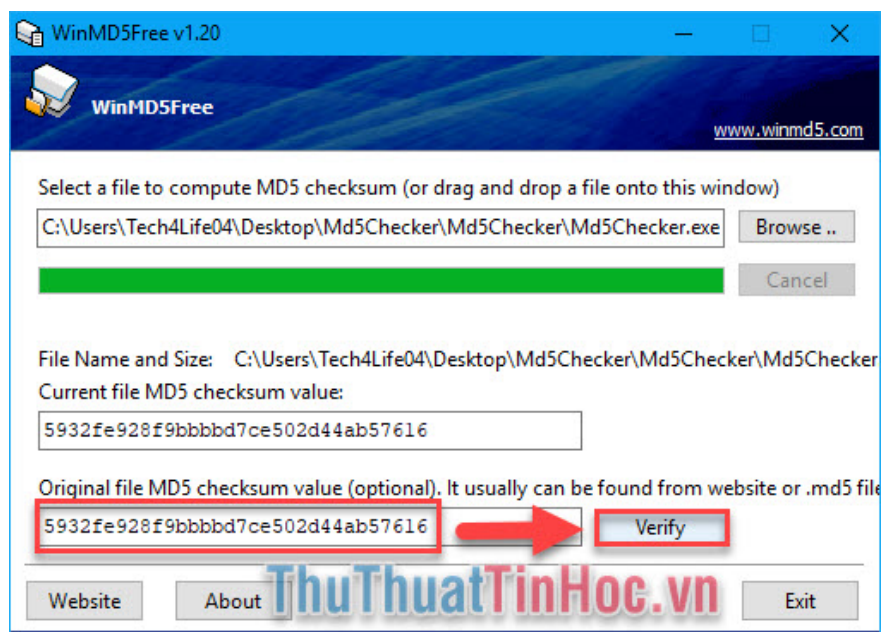

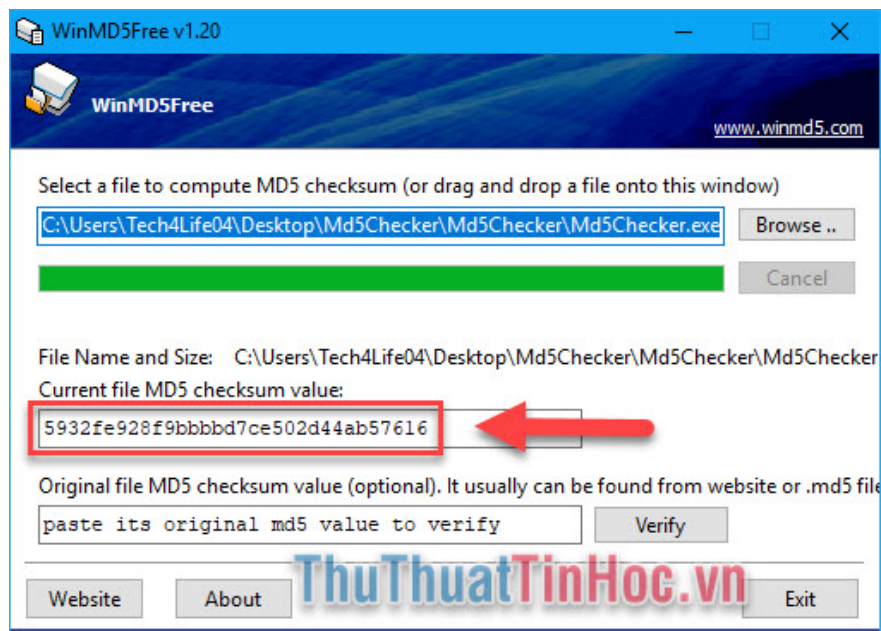

Step 2: Open the software, in the main interface, click **Browse** .

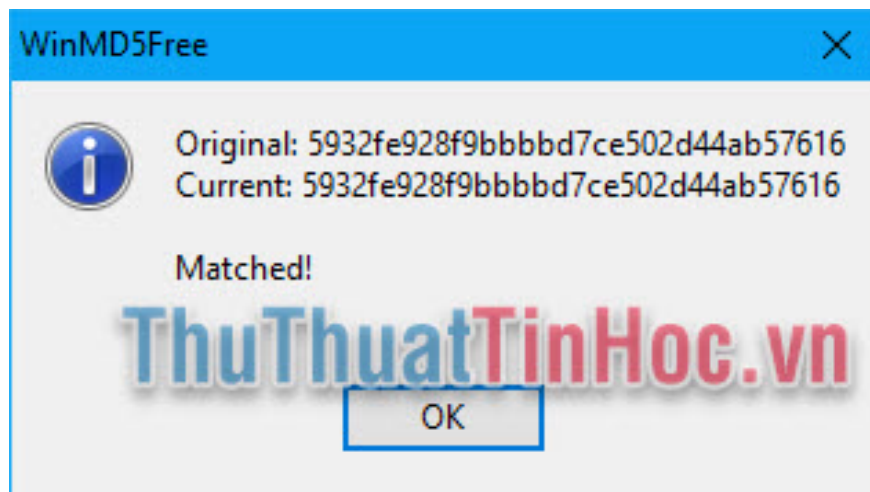

Step 3: Select the file you want to test MD5, click **Open**.

Step 4: MD5 code will be displayed immediately, you proceed to check by copying MD5 published by the manufacturer into the MD5 Checksum line and then click **Verify**.

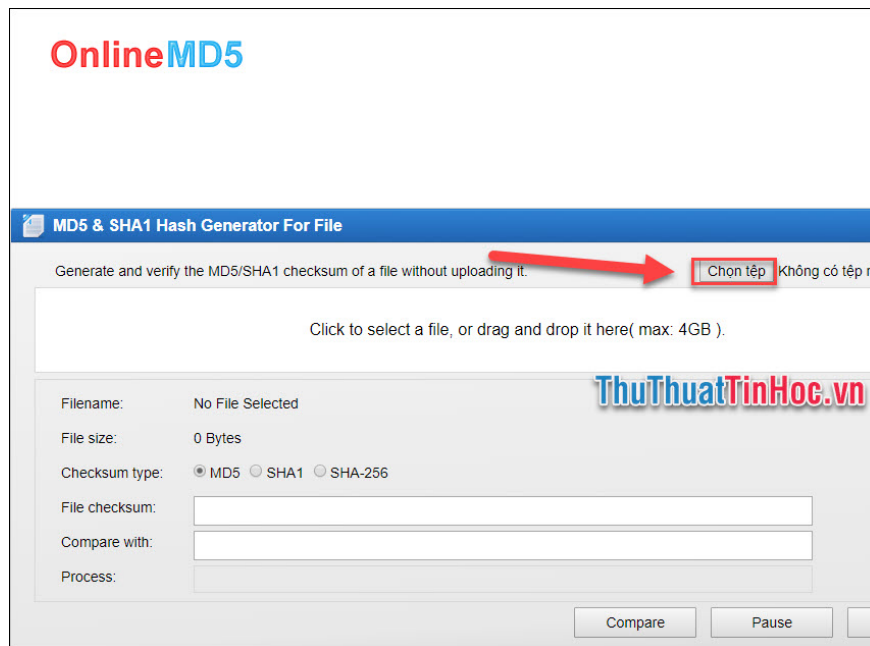

The screen shows the matching MD5 code:

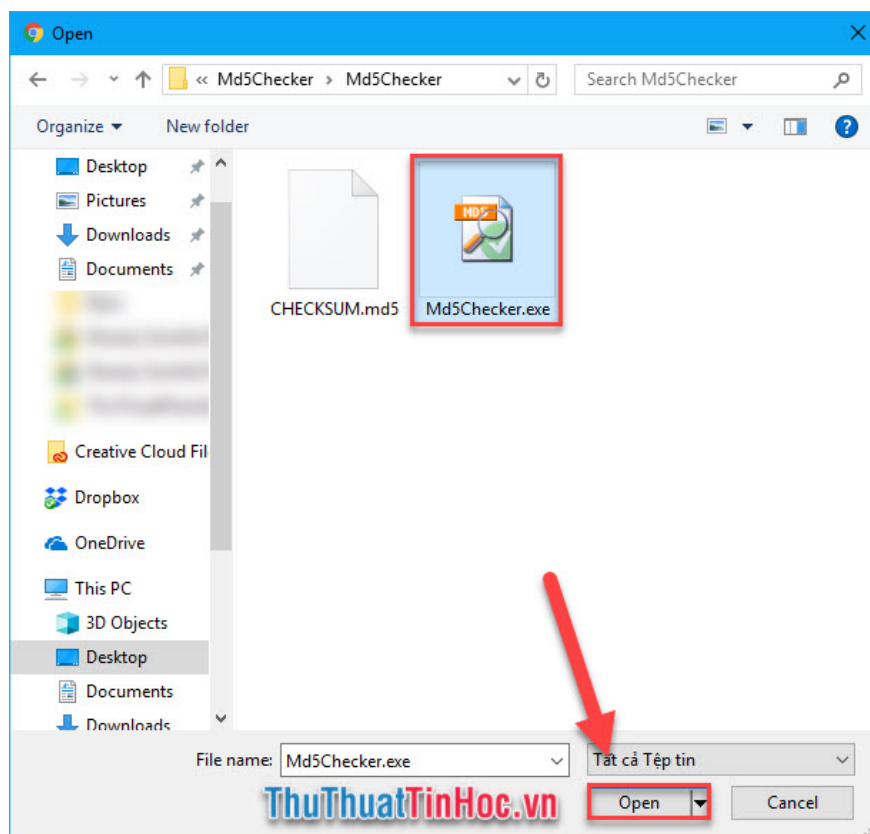

Check MD5 by website

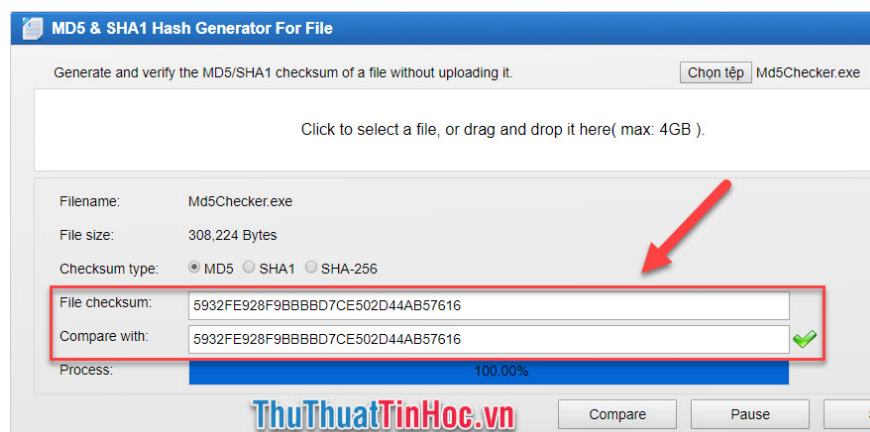

Step 1: You access the website <http://onlinemd5.com/>. In the main interface, click " **Select file** ".

Step 2: Select the file you need to check MD5 and **Open**.

Step 3 : Copy the code MD5 provider announced and the **Compare with** box to compare:

When you see a green tick, it means that the MD5 code of the file is correct, you can safely use it.

These are the two fastest and most accurate ways to check MD5 with software and websites, helping you to protect your computer from malicious files. Wish you a successful practice!
