

Check security errors on online browsers with Secunia

Secunia's research center has issued a serious warning about web browser errors such as: Internet Explorer, Netscape, Mozilla, ... Taking advantage of this security error, hackers will trick users into one page. Other websites are used to steal personal information, distribute viruses, trojans, etc. that users still think are safe websites.

Introduce

Secunia's research center has issued a serious warning about web browser errors such as: Internet Explorer, Netscape, Mozilla, . Taking advantage of this security error, hackers will trick users into one page. Other websites are used to steal personal information, distribute viruses, trojans, etc. that users still think are safe websites.

You can imagine the problem as follows: For example, when a pop-up window appears on a valid page, the hacker website may "kidnap" that pop-up. When this happens, the pop-up window opened above will display information from the hacker website, not from the original website. This error can be used to make Internet users believe that the information they are seeing is legitimate.

In order to help users to fix and detect their web browser being 'stuck' to these security errors, Secunia has launched an online testing tool. With this tool will help you get rid of scams that are rampant on the web today.

With 3 simple steps Secunia will check for you:

Step 01:

The test will be used with Citibank's website

When you open the CitiBank website, and click on a photo, the photo may look like the image below. This is normal when Citibank displays a POP-UP window with information about dishonest emails

Picture 1 of Check security errors on online browsers with Secunia

Step 2:

Start checking by clicking on one of the two links below. Use the first link if you have Pop-Up blocking software or use the 2nd link if your computer does not have software to block Pop-Ups

Use for software that blocks Pop-UP software

Left Now - With Pop-up Blocker - Left Click On This Link

Used for machines without Pop-Up software

Test Now - Without Pop-up Blocker - Left Click On This Link

Note: If you want to check multiple times, please refresh this page before each test.

Also if on TipsMake.com that the test still has no results please click here to do it again.

Step 3

Your computer will be in danger if after checking out a Pop-Up window and some warning information of Secunia instead it should be CitiBank's Pop-Ups.If so, you need to fix it now!

What do you have to do then?

Please see the appropriate advice on errors you can fix to mitigate the possibility of being attacked by these security errors.Secunia's advisory information will update the information as software companies issue patches

Please see details of the corrective instructions (Please note that you are using the browser you are using)

- Internet Explorer
- Mozilla / Firefox
- Opera
- Konqueror
- Safari
- Netscape
- iCab
- OmniWeb
- Internet Explorer for Mac
