

Check the durability of the smallest phone in the world and unexpected results

Zanco Tiny T1 is the smallest phone in the world with the size of 46.7 x 21 x 12mm just as big as a thumb and weighs only 13g, lighter than a coin. Kickstarter creates Tiny T1 with the purpose of 'profile' when your phone is broken or lost.

Zanco Tiny T1 is the smallest phone in the world with the size of 46.7 x 21 x 12mm just as big as a thumb and weighs only 13g, lighter than a coin. Kickstarter creates Tiny T1 with the purpose of 'profile' when your phone is broken or lost.

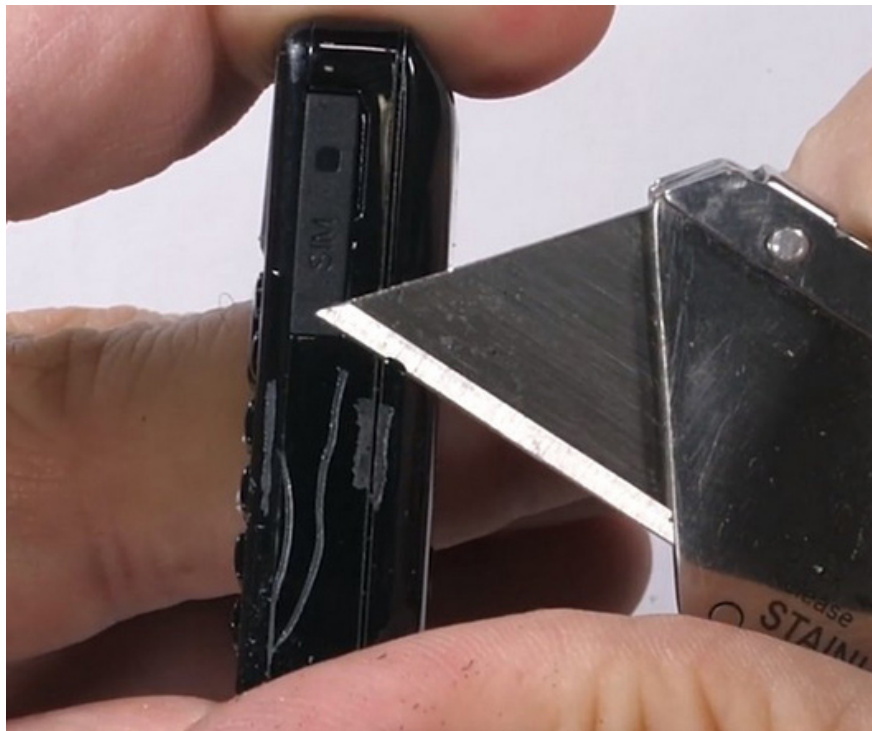

According to the manufacturer, Tiny T1 is equipped with 32GB internal memory, 200mAh battery can operate 180 consecutive calls or 3 days in standby mode, support 2G, Bluetooth and support charging via microUSB port. Tiny T1's 0.49-inch OLED display can display text with 64 x 32 pixel resolution.

Zanco Tiny T1 has a selling price of 52 USD (about 1.2 million VND).

JerryRigEverything made a test on Tiny T1 to know the durability of the smallest phone in the world.

With a scratch test, from the side of the device to the Tiny T1 key, it is easily scratched just after a few operations by the machine design material is mainly made of plastic.

And the screen couldn't avoid the disastrous outcome.

In the fire test, when there is a heat effect, the screen of the machine even shows signs of contracting. Although it can still be displayed, the image on the screen is no longer clear.

Finally, the bending test, the frame structure is quite good, so the bending is quite difficult.

Please follow the test details in the video below:
