

# Check the Laptop Serial (Serial) with the Command Prompt

You want to know the serial number and the name of your laptop, you can use the software to check the serial number and the model name or by cmd command.

You want to know the serial number and the name of your laptop, you can use the software to check the serial number and the model name. But to not waste time installing the supporting software, you can directly use the cmd command to check the Serial number and the name of the laptop.

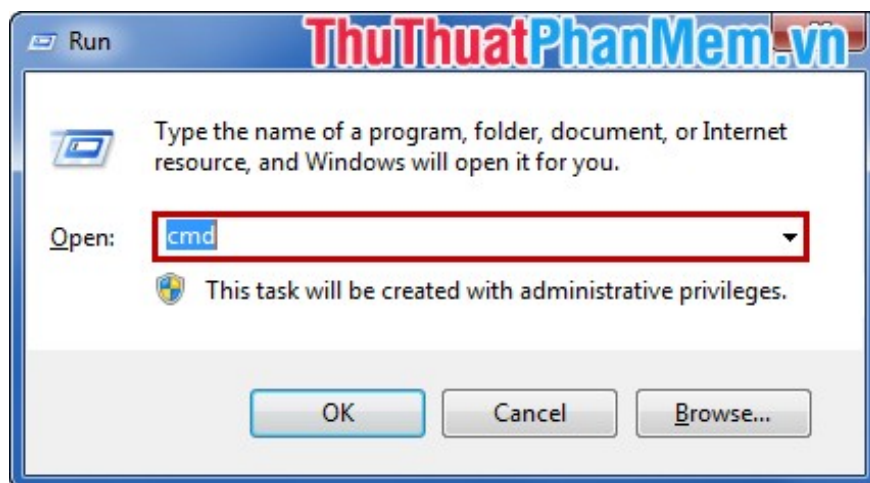

The following article shows how to check the Serial and the laptop model name with the cmd command.

**Step 1:** Open the **Run** dialog box .

Click **Start** and enter *Run* in the *Search programs and files box* and select **Run** . Or you can press **Windows + R** key combination .

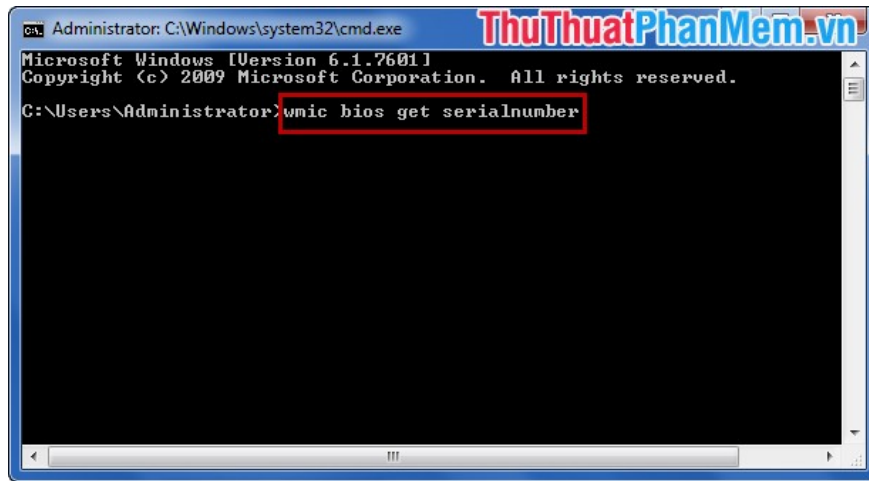

**Step 2:** In the **Run** window, enter the *cmd* command then click **OK** to open the **cmd.exe** window .

**Step 3:** In the cmd window.

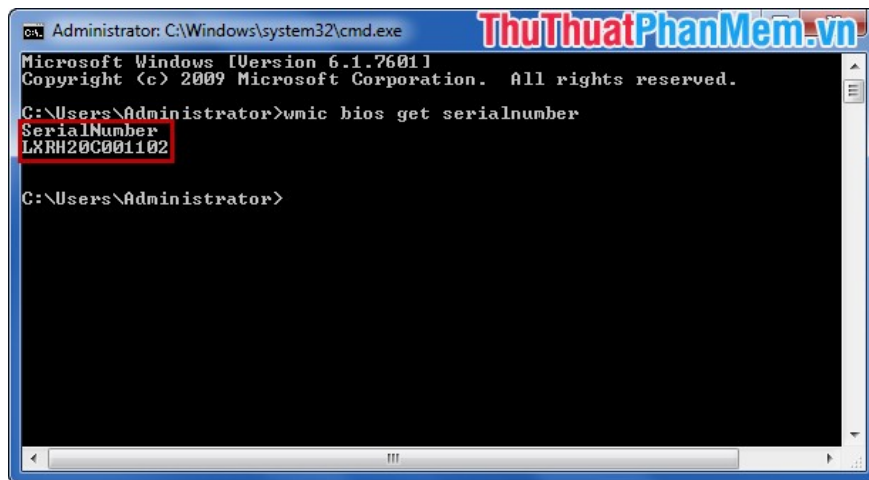

- To see the **Serial Laptop** number you enter the command *wmic bios get serialnumber* and press **Enter** .

```
Administrator: C:\Windows\system32\cmd.exe ThuThuatPhanMem.vn
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.

C:\Users\Administrator> wmic bios get serialnumber
```

The Serial number will show at the bottom of the command line, the Serial number only found on Laptops with desktop computers will not display the Serial number.

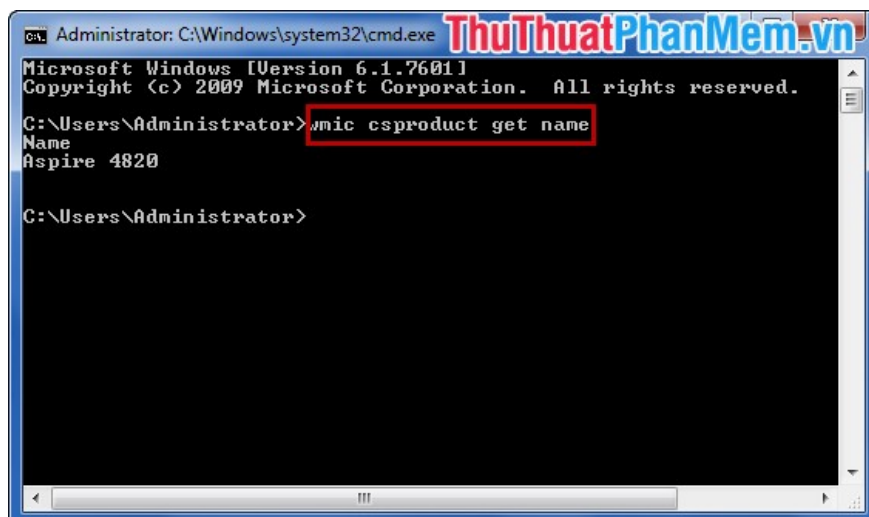

```
Administrator: C:\Windows\system32\cmd.exe ThuThuatPhanMem.vn
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.

C:\Users\Administrator> wmic bios get serialnumber
SerialNumber
LXRH20C001102

C:\Users\Administrator>
```

- Also you can see the name of the computer by entering the command line `wmic csproduct get name` and press **Enter** . The device name will be displayed below:

```
Administrator: C:\Windows\system32\cmd.exe ThuThuatPhanMem.vn
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.

C:\Users\Administrator> wmic csproduct get name
Name
Aspire 4820

C:\Users\Administrator>
```

The article shows how to check the Serial and the laptop model name with the cmd command. From now on you only need to remember the cmd command to quickly check the Serial and lap top machine name. Good luck!
