

## Cheetah encounters lion, who is the winner?

Video captures a rare encounter between a lion and a cheetah (also known as a cheetah). The cheetah was resting on the grass when two lions appeared. They crept closer to the cheetah.

Video captures a rare encounter between a lion and a cheetah (also known as a cheetah). The cheetah was resting on the grass when two lions appeared. They crept closer to the cheetah.

The cheetah was too subjective and confident in its speed, so when the male lion came very close, the cheetah slowly turned and ran away. This prevents it from getting good enough speed to escape the lion. As a result, it was quickly captured by the enemy and became a meal for them.

The same feline hunter, but the lion and cheetah have completely different biological structures.

The cheetah, also known as the cheetah, is the fastest animal on the planet on land. Thanks to its elongated body, small, compact head, short snout, long legs, slim belly, and long flexible back, the cheetah can reach a maximum speed of up to 120km/h. This animal can accelerate from 0 to 95 km in 3 seconds, suitable for its ability to move and chase at high speed.

However, this cheetah has only speed as its only weapon, so they often run away to save their lives when encountering large enemies such as leopards or lions.

Meanwhile, lions with their powerful muscles often prevail when confronting cheetahs. Thanks to the difference between bodybuilding, strength and fighting ability, lions are always easy to knock down, even bite the cheetah to death in lightning clashes.

With a solitary lifestyle, cheetahs are also often the losers when confronting herd predators such as the African wild dog.
