

China built the world's highest 5G station on Mount Everest

A 5G broadcast station has been installed by China at Mount Everest, at an altitude of 5,000 meters above sea level. This station has the ability to stream live mountain views at 4K 360 degrees continuously 24/7.

A 5G broadcast station has been installed by China at Mount Everest, at an altitude of 5,000 meters above sea level. This station has the ability to stream live mountain views at 4K 360 degrees continuously 24/7.

Creating a 5G signal at the world's highest point is not easy. In order to transport appropriate equipment to the area and then install the base station, the workers had to go through the training process of climbing and overcome the fear of heights.

Chinese workers install a 5G broadcast station at a height of 5,000 meters at Mount Everest.

China Telecom has installed two 360-degree cameras, one for mountain views and the other for panoramic views of the tower to continuously stream images of Mount Everest.

Liao Hongfeng, a spokesman for China Telecom, said that the 5G installation at the world's highest location will give Chinese people the opportunity to see the beauty of Everest at home during the period of isolation through the network. 5G.

The world's highest 5G broadcasting station came into operation in the context of fake news spreading that 5G spread corona virus. Many Westerners believe that making the 5G burning station movement in many European countries threaten emergency communications services during the epidemic season.
