

Chinese smartphones have no worthy fast charging competitors

Smartphones with fast charging capabilities have become a necessity and are no longer a luxury item when looking at what Chinese companies can do.

Smartphones with fast charging capabilities have become a necessity and are no longer a luxury item when looking at what Chinese companies can do.

With Chinese smartphones, fast charging speeds are truly unmatched, especially when you look at the slow charging speeds of Galaxy smartphones and iPhones. Users no longer have to wait hours to fully charge their batteries. Whether they are on the go, gaming, streaming, or handling work, a device that can charge in minutes is a huge convenience. Here are the 6 fastest charging smartphones available today, all from Chinese companies.

OnePlus 13

The OnePlus 13 is one of the fastest charging smartphones on the market, supporting 100W wired charging globally and 80W in the US. According to OnePlus, the global version of the OnePlus 13 can charge from 0 to 100% in just 36 minutes. If you prefer wireless charging, the device also offers 50W speeds - an impressive number compared to many competitors.

The reason the US version of the OnePlus 13 charges a little slower is due to the difference in voltage; while most US outlets operate at 110-120V, many other regions use 220-240V. Still, OnePlus' SuperVOOC technology ensures fast charging, and the 6,000mAh silicon-carbon battery helps keep things going.

Motorola Edge 50 Ultra

Motorola has made a big push in 2025 with the Edge 50 Ultra leading the charge in speed. It has 125W wired charging, allowing it to charge from 0 to 100% in just 28 minutes, the fastest on this list.

The Motorola Edge 50 Ultra's 4,500 mAh battery is a bit smaller than the 5,000 mAh standard of many flagship devices, however, which may mean you'll need to charge it more often. But at this charging speed, that may not be a big deal. The Motorola Edge 50 Ultra also supports 50W wireless charging and 10W reverse wireless charging.

Honor 200 Pro

The Honor 200 Pro is one of the standout products with its 100W wired charging capability, allowing the battery to be fully charged from 0 to 100% in just 45 minutes. Although it is not the fastest device, it is still among the top performing products.

The Honor 200 Pro's standout feature is its 66W wireless charging capability, one of the fastest wireless charging solutions available. However, to take full advantage of this speed, users will need to use Honor's proprietary SuperCharging wireless charger.

Realme GT 7 Pro

If you are looking for a combination of fast charging and long battery life, the Realme GT 7 Pro could be the ideal choice. The device comes with 120W fast charging technology that can charge the battery to 50% in just 13 minutes and 100% in 30 minutes.

One of the highlights of the Realme GT 7 Pro is its 6,500 mAh battery (for the global version). The Indian version has a smaller 5,800 mAh battery, but both versions are equipped with Realme's power-saving charging technology to bring optimal performance to users.

Vivo X Fold 3 Pro

The Vivo X Fold 3 Pro foldable smartphone has changed the game with its impressive charging speeds. With 100W wired charging technology, the device can reach 38% battery in just 15 minutes and 100% in just 33 minutes - an incredible feat for a 5,700 mAh battery.

Additionally, the Vivo X Fold 3 Pro also supports 50W wireless charging, making it one of the most versatile foldable devices in terms of power management.

iQOO 13

While not as flashy as the Vivo X Fold 3 Pro, the iQOO 13 still impresses with its 120W wired charging capability, which can charge from 0 to 100% in just 22 minutes. With a 6,150 mAh (global version) or 6,000 mAh (Indian version) battery, the iQOO 13 is an ideal choice for users who need high battery performance.

While it's not the fastest charging smartphone, the iQOO 13 strikes a great balance between speed and battery life.
