

Choose a phone that supports a memory card or a phone with a large internal memory?

Many people feel anxious between the two options of spending more money, possibly up to millions of VND to buy a phone with a larger memory, or use a support memory card to save costs. In fact, each of them has different advantages and disadvantages and you need to know the information below, then surely will find the most suitable choice for you.

Many people feel anxious between the two options of spending more money, possibly up to millions of VND to buy a phone with a larger memory, or use a support memory card to save costs. In fact, each of them has different advantages and disadvantages and you need to know the information below, then surely will find the most suitable choice for you.

1. Select memory card or cloud to save data?
2. The real difference between SD Card and SSD card
3. Check SD and USB memory card performance

1. The phone has a large internal memory

Advantages:

Large internal memory will help the phone to operate stably, minimizing errors related to data loss or sudden exit applications while in use. This advantage enhances the experience compared to machines using applications installed on the memory card.

Quick read and write speed helps you to open applications and transfer data in a flash, much faster than many memory card phones at the same price.

Another plus when you buy larger internal memory smartphones is to have more color choices as well as configuration upgrades. In addition, the large internal memory capacity will help you comfortably use 2 SIM without worrying about the case of a phone with a SIM tray in the hybrid, sharing the memory card with the secondary SIM.

Defect:

The biggest headache is that your data may be lost if the device fails to turn it back on. This can happen when you break the phone, fall into water or explode. Meanwhile, if the memory card is installed and it is still healed after the accident, it is likely that the data inside will still be safe.

When the phone is full of memory, you will have trouble upgrading, now you have to delete or use backup software like iCloud, Samsung account, Google Drive, Google Photos, . More, the ones Large internal memory phones often have a high price.

2. Phone supports memory card

Advantages:

The first noticeable benefit when using a memory card is cost savings. If you have to spend an additional 1-2 million to choose to buy a device with capacity from 32GB to 64GB or higher, the memory card, this number is only a few hundred thousand dong.

The next benefit of the memory card is not fear of data loss and if you regularly change or upgrade the phone, it will help to prevent the transfer of data (music, movies, photos, .) between old and new machines, just remove I can use it immediately.

The phone uses a memory card capable of customizing the memory card to internal memory and saving the application directly to the memory card in some devices using Android OS 6 and above. From there, the phone status of full memory will be less and more stable.

Defect:

Minus points of memory cards seem to be the opposite of internal memory. For example, you may have a phone error that does not receive a memory card, loss of data if using a poor quality card or a memory card that is incompatible with the device causing lagging when using.

Some phone lines only support memory cards to store images, music, not save games, applications that make the device faster than usual. Moreover, the read / write speed is not optimal by internal memory device.

1. How to check fake and real memory card on Android phone

3. So, how to choose a good one?

In fact, choosing a phone that supports a memory card or a large internal memory is entirely dependent on your own preferences and needs. For example, if you are a person who likes to install a lot of games and applications, it is best to invest more than 64GB of internal memory to ensure the best experience in the long term. Conversely, you only need to store normal data, you can choose to use an external memory card for cost savings.

In short, there are many other criteria to make a decision to choose which one is good. You should consider and refer to the advantages and disadvantages mentioned above and go to your own final choice. Hopefully, after this article you can choose for yourself a suitable phone to use.
