

# Choose headphones like in-ear, on-ear or over-ear?

Sound quality is the number one criterion when looking for a new headset, followed by comfort and convenience criteria. In addition, the purpose of using headphones also affects your decision.

Sound quality is the number one criterion when looking for a new headset, followed by comfort and convenience criteria. In addition, the purpose of using headphones also affects your decision.

There are three types of headset models you can consider:

1. In-ear is a type of earpiece that is inserted in the ear
2. On-ear is a headset worn outside the ear
3. Over-ear is a headset with headphones

These headphones have their advantages and disadvantages, so decide which one is right for you after reading this article.

1. Do you distinguish headset, headphone and earphone?

## In-ear headphones

**The in-ear headset** is also known as **the earphone headset**, which is probably the most common headset when listening to music while on the move. This headset is cheap and usually comes with a phone. Overall, it is the most durable of the three earphones.

1. Choose the right in-ear headset

There are two types of in-ear headphones: the type is designed to fit inside the ear better and the liquid hard plastic is located right inside the ear. The previous type is usually good in passive noise, which means they can block background noise while listening to music.

Finding the right headphones is important, especially for comfort. For this reason, most headphones today use a tight fit design. You can still see loose old-fashioned headphones like Apple's AirPods.

1. How to pair AirPods with PC, Mac, Android phone or other device

The in-ear headset is small, light, easy to carry and easy to carry. Many headsets of this type are used with microphones with smartphones so you can chat with others. You can choose to buy sports headsets for ear plugs, don't worry about falling off while running, waterproof headphones for swimming and noise-canceling.

1. Choose headphones when exercising sports
2. Distinguish tips and choose noise-canceling headphones

The sound quality of this headset is not very prominent. For example, Apple's wireless Beats X headset, with normal sound quality, but it has the ability to pair iOS with one touch, extremely good battery life and fast charging. The convenience of wireless audio, easy pairing and fast charging time are factors that can beat the average sound quality.

This doesn't mean you can't own a high-end in-ear headset with good sound quality. There are many types in the market you can search to own both features and sound quality.

## Headphones on-ear

**On-ear headphones** provide a balance between the size of large family earphones and mobile in-ear options. If you can't stand the in-ear headphones for hurting your ears, this might be a great option. The characteristics of identifying these types of headphones are the earphones that fit perfectly into the ears.

Larger drivers will bring better sound quality but also more expensive. The on-ear headset is not easy to carry because it does not have many small sizes. Some of these headphones can be folded, while others can be comfortably wrapped around the neck when not in use. The larger the size, the greater the risk of breakage when placed in a bag, so there are many types that come with a hard case.

Some types of **on-ear** headphones are quite small like Sennheiser PX100 or many short models like Beats Solo3. Typical on-ear design is tight fitting earcups and good noise isolation. In some people's experience, the more tight the headphones are, the better the noise resistance is, but not very comfortable. Especially for those who wear glasses, they should try on-ear headphones before buying.

## Over-ear headphones

**The over ear headset** will cover your entire ear. It is large, bulky but more comfortable than on-ear headphones.

Overall, the price of this over-ear headset depends on the size. It is usually very large, with powerful drivers providing improved sound quality on smaller models. Headphones of this type are often suitable for listening to music at home, while working at the table, playing games or producing videos.

1. Top best headphones for gamers 2018

The bulky size of these over-ear headphones makes them unsuitable for use on the street, rarely folds and virtually no carrying case.

## Other factors

Sound quality, comfort, convenience and purpose are all important when deciding on a new headset. However, there are a few other things to keep in mind like wireless features. Wireless audio has improved over the last decade but audio over the wire still transmits the best signal with the lowest latency.

If you are an iPhone user, you should invest in headphones that support W1 chips. Beats X and AirPods headphones mentioned above offer neat in-ear options but also offer other options worth considering. If convenience is weak at your decision, you should consider Bluetooth headsets.

1. Instructions for using the Bluetooth headset properly

### Summary

1. In-ear headphones are portable, cheap and convenient headsets with good sound quality
2. On-ear headphones are located between the portability and convenience, providing larger designs with better sound quality.
3. Regular over-ear headphones provide the best sound and the most comfortable design, but the large size makes it unsuitable for external use.

Hope this article has provided you with some knowledge about the types of headphones and you can choose for yourself the right headphones.
