

# Chrome Extensions for Developers

When developing a website, you often have to make a checklist of many complex requirements. Whether that task is dealing with colors or font schemes, CSS layout issues, or website responsiveness across different devices.

It is important to keep up with any new issues. Here are some of the best web development extensions for Google Chrome.

## 1. Color Pick Eyedropper

Like a website's color scheme and want to use it in your own project? A Chrome extension called Color Pick 'Eyedropper' allows you to extract colors with great precision, and a zoom feature for more standard color selections.

## 2. One-click Full Page Screenshot

Full-page web screen capture is an essential need of interface design. Sometimes the best way of communicating your design changes is to capture the entire website. As the name implies, this extension will only use one click to take screenshots from top to bottom without scrolling.

## **4. ModHeader**

Picture 4 of Chrome Extensions for Developers

ModHeader is one of the most popular Chrome extensions for modifying a website's HTTP header. With just one or two clicks you can enable header modification based on URL or resource type. The best part is that you can create multiple configurations and add different values ??to the modified header. All modifications can be restricted to just one tab or the entire web page.

## **5. UX Check**

Picture 5 of Chrome Extensions for Developers

We all need to evaluate a website using the HE approach (the activity of surveying and evaluating an interface's compliance with a recognized set of guidelines and usability). This is easily done with UX Check, an extension that displays all UX related feedback. After you click on an element that doesn't match the experience you've rated, you can add a note and take a screenshot. Finally, all changes can be exported in .docx format.
