Cleaning of horizontal door washers is an extremely necessary task to help this device ensure the longevity and durability as well as bring the best washing effect. With the simple way of cleaning below, we are confident you will be able to use the cleanest, cleanest family washing machine.

Why should a horizontal door washer be cleaned?

The washing process will remove dirt, mold, and bacteria from clothes that keep clothes clean. Many people think that these dirt substances will flow out of the water. However, it is only true for substances that dissolve and a large amount of fabric residues, lime deposits will still exist inside the machine. If hygiene is not practiced, the long-term washing machine will accumulate full of bacteria and deposits, and at this time, regular and periodic cleaning is especially necessary.

Instructions on how to clean the horizontal door washer

According to experts, every 1-2 months you should proceed to clean the front-loading washing machine to thoroughly eliminate harmful agents, odors, mold, dirt in the washing machine. Hygiene is conducted as follows:

Clean the outside of the door washer

With the outside of the washing machine you use a soft damp cloth that can use a little detergent and gently wipe it.

Note that during cleaning, do not rub hard, do not use strong detergents or hard towels to limit scratching.

Cleaning inside the washing machine cage horizontal door

With front-loading washing machine cage, you can proceed as follows:

Method 1: Use white vinegar

1. Step 1: Pour warm water about 40-50 degrees C so as to submerge the washing cage
2. Step 2: Add 1-1.5 liters of white vinegar
3. Step 3: Install the program to squeeze gently then run the machine. Vinegar and water will be mixed together, weaving into the corners of the washing machine cage

This will help eliminate unpleasant odors, mold and harmful bacteria inside the cage.

Method 2: Use salt - soda and lemon

1. Step 1: Mix the mixture of 100 grams of soda salt, 3 lemon juice squeezed. When the effervescent mixture is mixed, add half a cup of water to a safe detergent solution.
2. Step 2: Use a paint brush to sweep the mixture on the wall of the washing machine. Hold for 20-30 minutes.
3. Step 3: Use the long brush with the handle rub on the wall of the washing machine again for the stains to be completely removed.
4. Step 4: Drain the water at the highest level, then run the washing machine on a normal washing cycle.

This method is a bit laborious, but it can help to remove the residual deposits from the soil for a long time, bringing a clean and clean cage, shiny without unpleasant odors.

Method 3: Use detergent, washing machine cage toilet

Advantages of cleaning horizontal washing machine cage with detergent and washing cage toilet:

1. There is no need to maintain the washing machine when using the product
2. Use a variety of washing machines
3. Anyone can easily manipulate, perform at home

For washing machines without washing toilet mode we do the following:

1. Step 1: Add water with a temperature of about 40-50 degrees C into the washing machine cage
2. Step 2: Add detergent, cleaning solution or toilet cleaner to the washing machine. Soak for about 90 minutes to dissolve the solution and squeeze into each nook and cranny of the cage.
3. Step 3: Setting up the washing mode is often done when you have finished cleaning the washing machine cage.

For washing machines with washing cage cleaning mode:

1. Step 1: Add cleaning liquid to the washing cage
2. Step 2: Select the washing cage cleaning mode
3. Step 3: Press the start button and wait for the machine to finish the washing cycle. For washing machines with a short cleaning cycle, during the run you should press Pause to soak for about 90 minutes then let the machine continue.

Cleaning rubber washer of washing machine

To clean the rubber gasket, take a clean, soft cloth and thoroughly wipe the gasket. This gasket should be cleaned weekly and should not be missed.

Things to keep in mind for efficient washing of the washing machine

1. Avoid abusing too much washing water. You should only give the amount of washing water as recommended by the manufacturer. Excessive use will result in the washing water being unable to drain out, causing accumulation of the washing machine.
2. Regular cleaning of the washing machine should be done weekly and monthly to avoid excessive fouling of the residue which may cause difficulties for cleaning later.
3. Attention to comprehensive hygiene: Outside, cage, rubber gasket, washing powder tray, exhaust pipe and water filter .

The above are simple ways you can directly do it at home to help your family's washing machine be bright and clean. Let's start working right away! Good luck!
