

Clean up Mac screens with Stacks feature

Apple has introduced a feature called Stacks in macOS Mojave that helps you organize document files on the desktop.

Many people have a habit of putting document files on the desktop. Over time your computer screen will become cluttered and it is difficult to find the documents to use. Thankfully, Apple has introduced a feature called Stacks in macOS Mojave, which helps you solve this problem.

1. The trick is to use Finder on Mac more effectively
2. Sort and sort files in Lion Finder
3. 3 steps to arrange desktop screen with Rainmeter

Basically, Stacks will clean up your desktop automatically by organizing files in groups and can be easily expanded by clicking. This feature is very useful especially for those who like to save everything on the desktop.

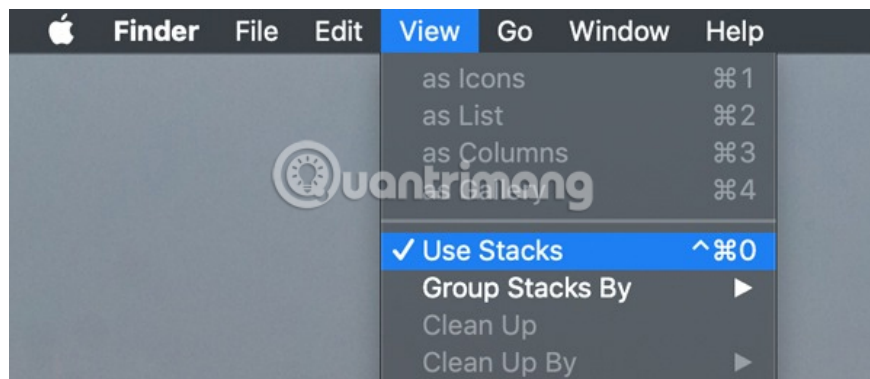

To activate Stacks follow the steps below.

How to enable Stacks on macOS

Note : You must use the version from macOS Mojave or above to use this Stacks feature on Mac.

Step 1 . Open the **Finder** .

Step 2 . In the **Finder** menu on the upper left, click **View** and select **Use Stacks** .

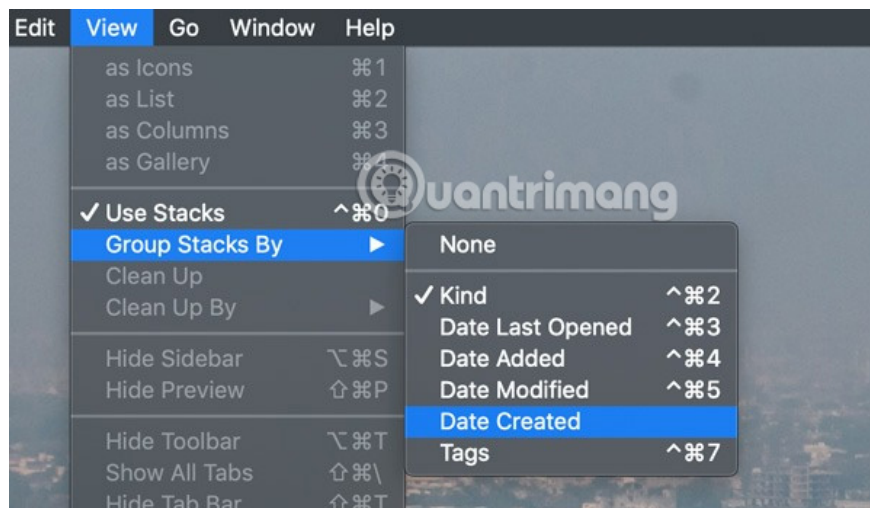

Step 3 . All files on the desktop will automatically be organized in groups defined by macOS.

This Stacks feature does not create random groups, it creates by file type (eg documents, images, movies, sheets, etc.) so you can quickly find the files to use. However, it should be noted that Stacks only arranges files, does not arrange folders on the computer screen.

Change how groups are in Stacks

You can change how to group files in different Stacks by date or by added file tags. To do this, reopen **View** and select the desired sort option from **Group Stacks By** .

When you click on a Stack, it will expand, displaying all your files in it. You can then interact with them (rename, drag, drop, etc.) as usual.

For old macOS users, this feature sounds familiar because it previously had the ability to create stacks for **Documents** folders and **Downloads** in Dock. However, Apple decided to extend this feature to the desktop in the latest macOS Mojave version.

If you want to return to the standard layout, simply uncheck the **Use Stacks** option in the **Finder View** menu.

I wish you all success!
