

CleanMyPC - the tool that takes care of all PC maintenance tasks

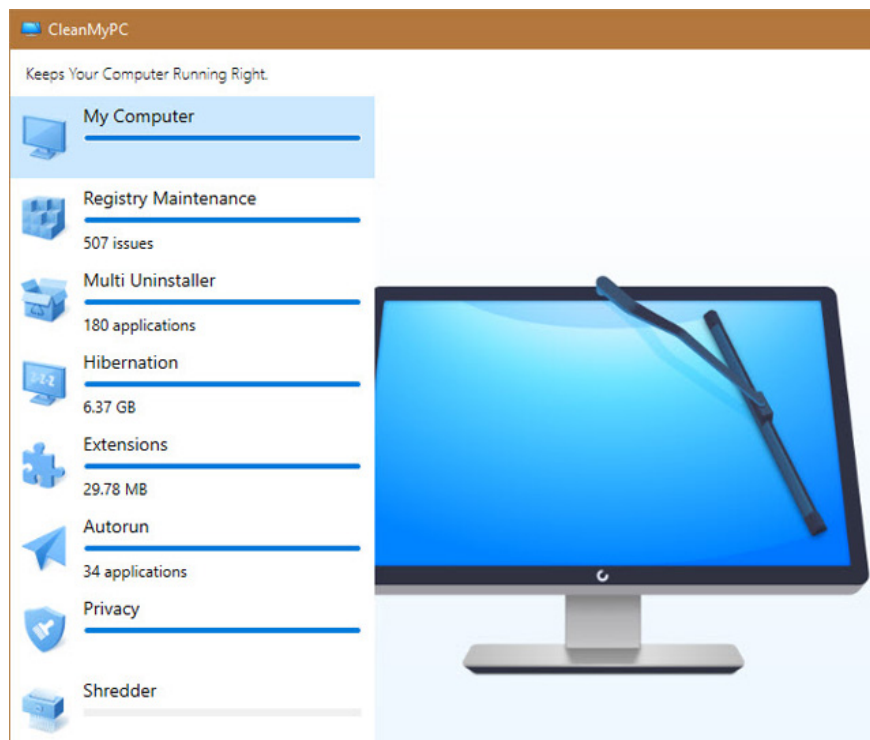

Every Windows user knows that this operating system will accumulate garbage over time. Windows has a number of tools for maintaining computers, but they don't offer as many features as professional tools. CleanMyPC is an application that provides features for computer maintenance, helping to operate better.

Every Windows user knows that this operating system will accumulate garbage over time. Windows has a number of tools for maintaining computers, but they don't offer as many features as professional tools. CleanMyPC is an application that provides features for computer maintenance, helping to operate better. This article will list the features of this versatile cleanup tool.

Get familiar with CleanMyPC

1. Download CleanMyPC

First download the application, then run and install it as usual. You don't need to choose any special options or worry about bloatware. After installing the computer maintenance software, you will see the main interface of CleanMyPC. Here are the parts in the interface.

My Computer

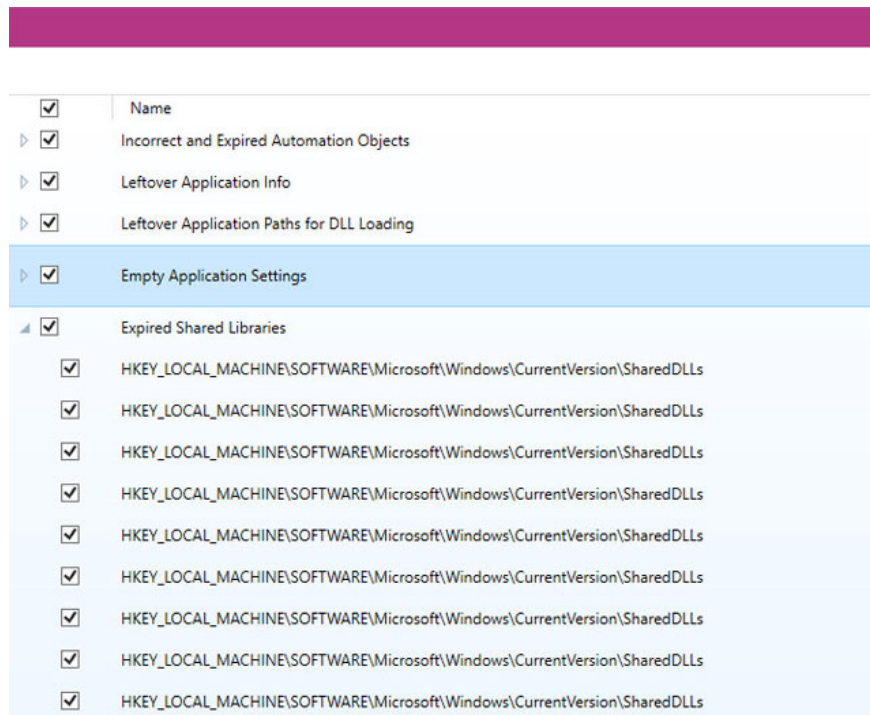

Name	Description
Caches & Logs	Clean cache files and delete old logs.
Caches	Cache files are created to store temporary data and can be...
Log Files	Logs are files which contain information about applications...
Help Files	Remove unneeded help files from applications.
Extra Languages	If application contains language translations you can remove...
Trash & Junk	Removes unneeded System files, old restore points and other...
Application Junk Files	Application Junk Files
Cached Windows Update Downloads	Update cache is a special folder that stores the update...
Font Cache	OS and other applications create font caches to keep...
Missing Start Menu Items	Start menu items that link to missing files or empty folders
Memory Dumps	Memory dump are created when your computer stops...
Other System Junk	C:\Users\stegn\AppData\Local\Microsoft
Prefetch Files	Windows uses these files to open commonly used...
Recycle Bin	Recycle Bin

On **My Computer** , you can scan your computer to find junk files that are taking up space on your computer by clicking here to run and waiting while it reviews the system.

Once done, just click **Clean** to delete the junk file or select **Show details** to see more information about these files. Here, you can uncheck anything that you don't want to delete before clicking **Clean** .

1. Delete junk files in windows

Registry Maintenance

Over time, the Windows Registry will be filled with items from old programs and leftover data. Although you don't need to delete it, the CleanMyPc application has a Registry cleaner that can completely maintain your computer.

1. Is cleaning the Registry really necessary?

Click on the **Scan Registry** button and wait for the process to finish. Then click on the **Registry Fix**, but you should be careful when performing Registry cleaning because it can cause problems.

Multi Uninstaller

<input type="checkbox"/>	 Slack	Slack Technologies	80.05 MB
<input type="checkbox"/>	 Snagit 2018	TechSmith Corporation	424.72 MB
<input type="checkbox"/>	 Sonic Radar II	ASUSTeKcomputer.Inc	40.78 MB
<input checked="" type="checkbox"/>	 Speccy	Piriform	14.49 MB
<input type="checkbox"/>	 SpeedCrunch	SpeedCrunch	26.98 MB
<input checked="" type="checkbox"/>	 Speedtest by Ookla 	Ookla	177.54 MB
<input type="checkbox"/>	 Spotify	Spotify AB	198.94 MB
<input type="checkbox"/>	 StartIsBack++	startisback.com	4.18 MB
<input type="checkbox"/>	 Steam	Valve Corporation	12.16 GB
<input type="checkbox"/>	 SteamWorld Heist	Image & Form	309.86 MB
<input type="checkbox"/>	 Stencyl	Stencyl, LLC	430.05 MB

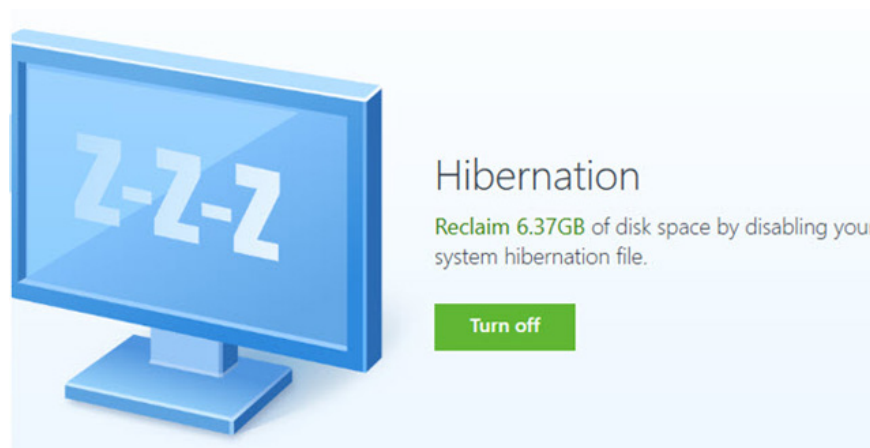

Uninstall Refresh 2 applications selected Search

This is an interesting feature of CleanMyPC, Multi Uninstaller allows users to remove some applications from the computer at the same time. Not only does it delete the application, it also deletes the files associated with it so you don't have to worry about anything left.

To delete the application, simply tick the box next to each program and select **Uninstall** at the end after selecting it. When viewing the list, you will see the **Broken** red icon if the application still has data that has not been deleted. Applications downloaded from Microsoft Store will have a blue Windows icon and if you can't find the app you want to delete you can use the search bar at the bottom right.

1. 10 tips to remove programs that cannot be uninstalled

Hibernation

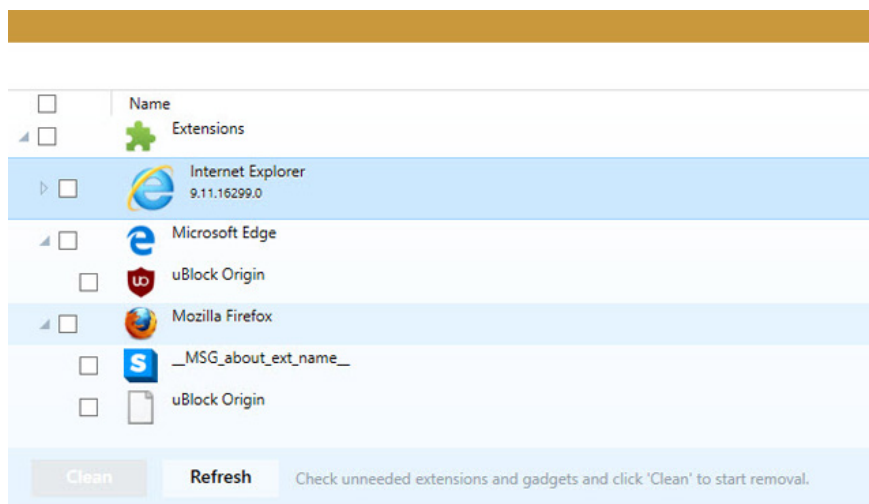

Hibernation is one of the power options in Windows. It saves your current session to the hard drive, then shuts down the computer. This feature is not considered a computer maintenance, but it helps users easily choose a session after a long time.

Although this mode is very useful for some people, it takes up quite a bit of space. If you don't use hibernation, you can use this space for other purposes. Just click the **Turn off** option to disable hibernation and get a few GB back. If you want, you can still activate it again.

2. Turn off, turn on Hibernate mode in Windows 7

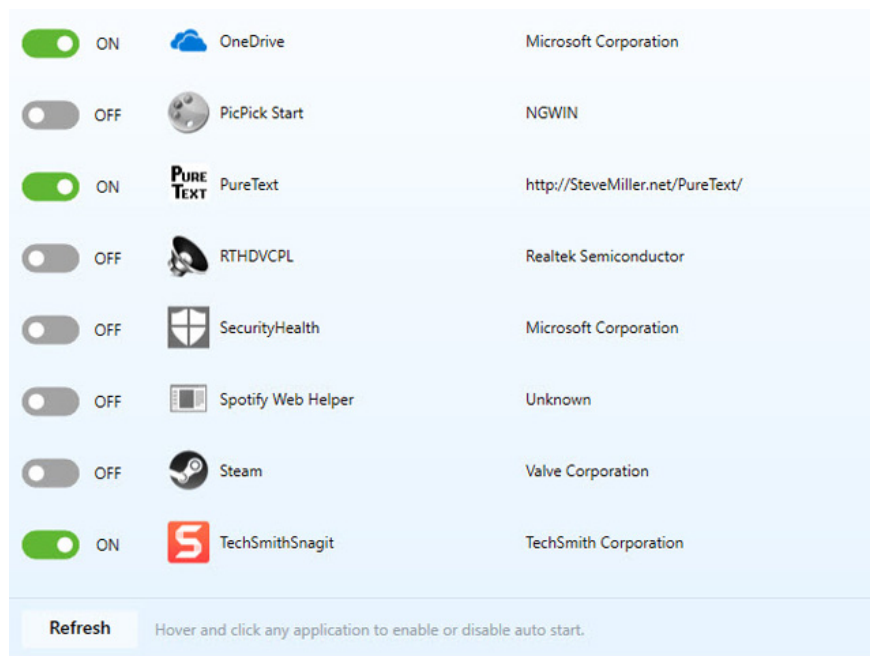

Extensions

This tab will check the extensions in each browser you use. It helps manage the extensions installed and deletes the extension automatically installed in the browser. One thing to note is that it does not list Chrome extensions, so you will have to manage these extensions manually.

1. How to remove Add-ons (Extensions) on Chrome, Firefox and some other browsers

Autorun

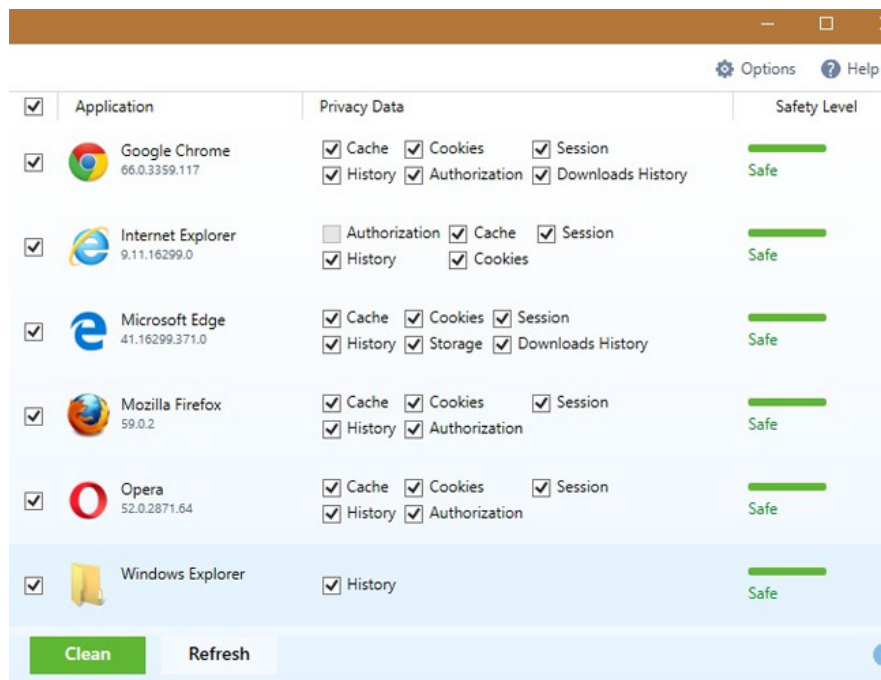

Programs that start with the system are very convenient, but many programs slow down the computer. Because most programs will automatically set up to run on the same system, you should check this list and just let the applications really needed.

On the Autorun tab, you can see all programs running in the system. Each program has manufacturer information and location to help you locate it easily. Just slide the button to **Off** to turn off the startup program. Keep an eye on your slow startup programs.

1. Turn off programs that start with the system on Windows 10
2. Disable programs that start with the system on Windows

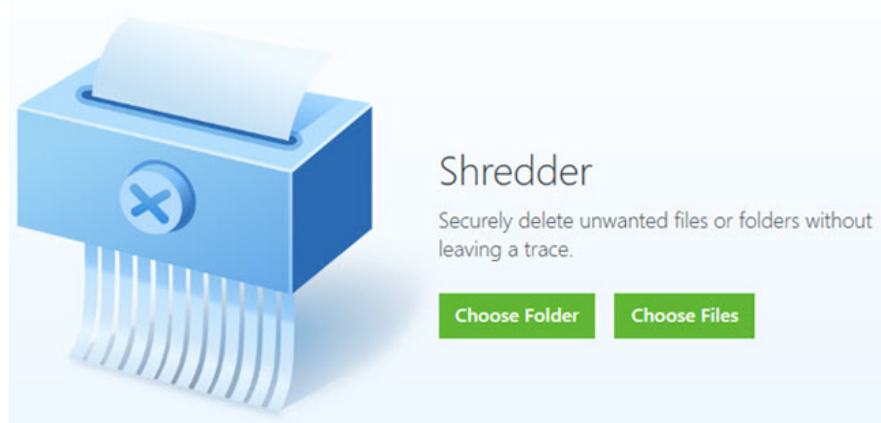

Privacy

The Privacy tab displays history information, cache and similar items of browsers as well as File Explorer. If you have this information, someone will know where you visit on the web. So if you want to keep your privacy, check this information and delete it by checking the items then clicking the **Clean** button.

1. How to automatically clear your browsing history when you exit Firefox

Shredder

CleanMyPC's final feature is Shredder, which helps you safely delete sensitive files so no one can restore them.

As you know, if you just click **Delete**, the deleted files will be moved to Recycle Bin and not deleted completely. If you use data recovery tools, you can easily retrieve these deleted files.

But with CleanMyPC, when you click **Choose Folder** or **Choose Files** and browse to the data you want to delete and confirm, the application will cancel this file and cannot recover it. Click on the **Adjust security level** at the bottom right and choose to have Shredder overwrite the file with junk data one, two or three times.

Options and Pro version

Click the **Options** tab at the top of CleanMyPC to configure the settings. On the **General** tab, use the **Manage Ignore List option** to specify the item you want the software to ignore. In the **Automatic Agents** section, you can configure some automatic options such as drag and drop support for Shredder. If you want to receive fewer alerts, you can check the **Notifications** tab and disable any notifications you don't want to see.

To have access to all the features in CleanMyPC, you must purchase the activation license by clicking the **Activate** button at the top right to access the purchase page or enter the software key if purchased. A CleanMyPc license costs \$ 39.95.

With this advanced version, you can clean files over 500MB, access the Registry cleaner and completely delete applications when using the uninstaller.

CleanMyPC provides a handy set of tools to keep your computer running at its best. It provides useful features such as disabling the same startup program, cleaning up junk files and uninstalling unused programs to improve computer performance.
