

# Coc Coc launches spell checking tool right on the browser

Coc Coc's development team has successfully researched the Vietnamese language checking and correcting application integrated in Chrome + browser.

**Coc Coc's development team has successfully researched the Vietnamese language checking and correcting application integrated in Chrome + browser.**

When combined with the auto-add feature, this feature can reduce 20-50% of the time to perform operations such as writing emails, blogs, reports, comment articles . on the Chrome Flag browser +.

Vietnamese language processing technology allows Chrome Flag + to recognize the words of the young people's communication style such as "hiu hiu, hix ." and not mislabeled. Accuracy in error detection and suggested how to fix approximately 94%.

**When an error is detected, the browser will show a red underline under the misspelled word . To see the proposed writing method correctly, users only need to right-click. With this feature, users can freely communicate on the network without making mistakes.**

This is considered to be part of the effort to make Chrome Flag + the best Vietnamese browser. The actual test of the development team showed that the Chrome Flag + for every 100 test cases is equivalent to or better than Google Chrome in 97 cases.

**The Chrome + flag is also testing to include local keyword search features in the browser**, using the Coc Coc search engine. For example, when Chrome users + type local keywords into the address bar like a noodle shop, a rice shop ., the browser will give the user the best search results. With other less localized keywords like foreign keywords, Chrome + will still return results from Google.

The Chrome + browser was launched in Vietnam last May with many features for domestic users such as Facebook access to all networks, automatically adding Vietnamese accents, fast download speeds, download capabilities. videos from YouTube sharing sites, Dailymotion . Chrome Flag + is built on Chromium open source platform. This is also the foundation of Google Chrome and Opera browsers.
