

# Compact mechanical keyboard with beautiful design like the real thing

60% mechanical keyboards are the current trend. If you don't have the means to own one, compact imitation mechanical keyboards can also help you experience the same feeling!

60% mechanical keyboards are the current trend. If you don't have the means to own one, compact imitation mechanical keyboards can also help you experience the same feeling!

With a price much cheaper than the 60% layout mechanical keyboard models, from only 300 thousand VND, you can own extremely cool mini mechanical keyboard models. If you have such a need, please refer to some suggestions below from Hacom

## 1. Mini mechanical keyboard V700

If you really like mini mechanical keyboards, the V700 is your top choice today. Always ranked number 1 in the list of best-selling mechanical keyboards today on e-commerce platforms Tiki, Shopee, Lazada. The V700 will surely satisfy you with the money you spend to own it.

The standard 61-key layout and beautiful RGB LED system are the first impressions if you see it. The compact design and super light weight are suitable for you to carry if you often have to move. The keystroke durability is up to 10 million presses, the standard of the majority of quality mechanical keyboards today. With a reference price of 400,000 VND, this is a pretty good price if you are looking for a compact mechanical keyboard but still meets good quality standards.

## **2. Zero Metoo TKL**

In terms of structure, Zero Metoo TKL is a genuine mechanical keyboard. But because the super cheap price is only comparable to regular imitation mechanical keyboards, Hacom will recommend this as the keyboard model for you. A super cheap mechanical keyboard model equipped with blue gaming switches for sound effects when typing is no different from expensive mechanical keyboards. Using an 87-key layout with standard key caps, you can completely change the keycaps to your liking. Not only that, Zero Metoo TKL also uses a rainbow LED system with 13 beautiful effects. If you have decided to invest about 3-400 thousand for an imitation mechanical keyboard, a cheap mechanical keyboard is still better, right?

### 3. K80 Keyboard

A mini mechanical keyboard but the price is only the same as another fake mechanical keyboard, that is K80. Only 300 thousand for a mechanical keyboard is a pretty attractive price. Of course, the K80's switch cannot be compared with other 2-3 million keyboard models, but it is still quite good for those who are new to mechanical keyboards. K80 gives a much better typing feeling on the switch than the rubber keys on fake mechanical keyboard models.

The K80 has a compact 87-key layout with ABS plastic keys that are meticulously and clearly laser-engraved. The beautiful LED system through each key brings a beautiful effect when used.
