

Compare Microsoft Surface Pro X with iPad Pro

Have you heard of a new tablet with an improved mobile processor, with removable keyboard and magnetic stylus?

Have you heard of a new tablet with an improved mobile processor, with removable keyboard and magnetic stylus? The tablet promises better battery life than laptops and runs most similar apps, with LTE support to help you stay connected. In short, this product promises to bridge the gap between phones and laptops.

Products that the article is referring to nothing else are Microsoft Surface Pro X and Apple iPad Pro.

But even though these two devices sound similar in concept, they represent two very different ideas. The iPad Pro is an upgraded iOS device that does more than the iPhone, thanks to its larger screen, keyboard, stylus, own operating system, and even mouse support. To be honest, the iPad Pro is a response to Microsoft's Surface Pro, which is famous for the idea of adding a detachable keyboard and stylus to a powerful tablet.

Now Microsoft's new reaction to the iPad Pro - shown in Surface Pro X - in turn looks at the strengths of the iPad, by distilling the Windows 10 experience to a more mobile-friendly form, thanks to features like better battery life, slimmer appearance and ARM-based processor.

What is the difference between Microsoft Surface Pro X and iPad Pro?

There is a clear difference here: The Surface Pro X is a more traditional PC. It has an replaceable SSD, multiple USB-C ports and will run lots of familiar applications like Office and Chrome just as expected, if you're used to using a traditional laptop. You have more control over what can be installed and how to use them. Besides, the

Surface Pro X has a trackpad and a mouse.

Microsoft promises the Surface Pro X will have up to 13 hours of battery life, compared to just 10 hours on the iPad Pro. The Surface Pro X also has a larger 13-inch screen, which is similar in size and thickness to Apple's model.

The price of Microsoft Surface Pro X compared to iPad Pro

In terms of price, the Surface Pro X starts at \$ 999. The Type Cover and Surface Pen are sold separately, priced at \$ 139.99 (3,240,000 VND) and \$ 144.99 (3,350,000 VND) or you can buy a combo for \$ 269.99 (6,243,000 VND). A total of \$ 1268.99 (VND 29,342,000) for the full Surface Pro X experience.

Apple's iPad Pro is priced similarly, starting at \$ 799 (VND 18,475,000) for a small screen and \$ 999 (VND 23,000,000) for a model the same size as the Surface Pro X. Apple Pencil is priced at \$ 129 (2,983,000 VND), while Apple's smart keyboard, Smart Keyboard, costs \$ 179 (VND 4,140,000) or \$ 199 (4,600,000 VND), depending on tablet size, with a starting price of \$ 1,098 (VND 25,390,000) or \$ 1,327 (VND 30,685,000). Of course, for the same amount, you can easily own a real laptop from Apple or Microsoft.

It is still too early to say how the war will unfold: iPadOS is a completely new product and there is much to be proven when turning the iPad into a main computer. There are still some big questions about whether Microsoft's new SQ1 processor really keeps up, especially with past errors of Windows ARM devices (such as the original Surface RT). The same question is asked: Can you rely on iPad Pro or Surface Pro X to completely replace a laptop?

'What is a computer?' The question was initiated by Apple two years ago, creating an ongoing debate on the Internet about the future of laptops. A year later, the introduction of Surface Pro X was Microsoft's clear answer to this problem. Whether or not one of these two firms can actually give the right answer to that question remains to be seen.
