

Compare Samsung Galaxy S20 Ultra camera and iPhone 11 Pro Max

In the world of smartphones, another 'arms race' continues to be equally tough, it is about camera quality (including the ability to take photos and videos).

As the design and processing power are becoming increasingly saturated, in another world of smartphones, another "arms race" is just as tough, it's about camera quality (including the ability to photography and video capabilities).

It's not hard to see how this battle is having a major impact on the smartphone industry. For example, the number of camera sensors on a phone. If about two years ago, a phone with a dual camera cluster was considered a trend, then today, many Android smartphones, even not in the high-end segment, have been equipped with 4, 5. camera sensor. One manufacturer that is always "calm like that" Apple also had to equip up to 3 rear cameras for iPhone 11 Pro and iPhone 11 Pro Max.

However, the number of cameras is one thing, the quality of photos and videos is a different story. Samsung Galaxy S20 Ultra has just been launched by Samsung a few years ago and is considered one of the best smartphones for mobile photography and video recording in the world. Referring to Samsung, the majority of users will immediately think of the rival to the 'lifetime' of Apple. iPhone 11 Pro Max is currently the best Apple phone at the moment, while the Galaxy S20 Ultra is also the flagship smartphone of the Korean manufacturer in the first half of 2020. So besides the comparison dry in terms of hardware configuration and processing capabilities - which are affected by two operating systems (iOS and Android) which are so different - the ability to take photos and videos of the two most advanced smartphones. How is this world inferior to each other?

Recently, the famous YouTuber ThingsApplePro posted a 10-minute video comparing the actual camera performance of the Galaxy S20 Ultra and the iPhone 11 Pro Max. However, before coming to the video, let's take a look at the main camera specs of both products.

Galaxy S20 Ultra rear camera cluster includes 4 lenses: 108MP main camera supports phase-detection focusing, optical stabilization, f / 1.8 aperture, super wide-angle camera 12MP aperture f / 2.2, telephoto camera 48MP aperture f / 3.5 and finally DepthVision depth sensor.

iPhone 11 Pro Max has 3 lenses in the rear camera with the specifications of 26mm f / 1.8 wide-angle lens, 2X telephoto lens with 52mm f / 2.0 focal length and finally super-angle lens. 13mm f / 2.4 wide, all with 12MP resolution.

Here are actual reviews from ThingsApplePro:

From a personal perspective, do you like the quality of taking photos and videos on your Galaxy S20 Ultra or iPhone 11 Pro Max? Please leave your comments!
