

Compare the durability of Galaxy Z Flip and Motorola Razr when dropped from a height of nearly 2m

Today's smartphones are not only equipped with a strong configuration, but also have a beautiful design and a good shell quality.

We all know the main function of smartphones is to support communication, work and entertainment, but in some ways, they also act as a technological toy, or 'jewelry'. show the status and style of the owner.

To fully meet the above requirements, today's smartphones are not only equipped with a strong configuration, but also have a beautiful design and a good body shell quality. In the second aspect, durability is one of the top concerns. Smartphones are inseparable from many people today, we use it almost often, so situations such as scratches, bumps or even falls are inevitable.

Just like a car, the impact resistance test is a familiar test for smartphones. Mobile device maker AllApplePro recently spent thousands of dollars conducting a relatively expensive test: Dropping two of the most popular folding screen smartphones today: Samsung Galaxy Z Flip and Motorola Razr from above high to see which phone is the endurance champion.

After many situations dropped from a height of about 1.8m, outside injuries to both smartphone models are inevitable. Because it is made of glass, the back of the Galaxy Z Flip has been cracked, severely broken, while the back and edges of the Motorola Razr are almost just dented. When checking the screen area, the screen of the

Galaxy Z Flip was sunk and surrounded by the surrounding floating edges so it was almost undamaged.

On the contrary, there has been heavy damage on the screen of Motorola Razr, which is the appearance of a large dead pixel strip running along the leftmost screen, significantly affecting the visibility. However, the big plus of both devices is that the screen can still be touch and use normally. Nearly all significant damages occur only in the outer shell - an unavoidable element.

The entire testing process is encapsulated in the video below:

What do you think of these 2 folding phones?
