

Computer 2 monitors all in one

The highlight of the product is equipped at one time with 2 high-resolution 1920x1080 IPS screens of very good quality, including 1 external touch screen and 1 anti-glare (non-touch) screen inside.

Asus launched the 2-screen Taichi21 computer.

The highlight of the product is **equipped at one time with 2** high-resolution 1920x1080 IPS **screens** of very good quality, including 1 external touch screen and 1 anti-glare (non-touch) screen inside.

Asus was very attentive to Taichi's screen border, glossy plastic material and touch-screen glass that made it easy to confuse this from the outside.

The edge of the device includes the Windows touch key, camera, light sensor and the glowing Asus logo on the right. The internal screen of the machine has good anti-glare capability. Next to the right is a sliding power key.

Despite being equipped with two 11-inch screens, the overall thickness of the Taichi screen is no different from the basic ultrabooks.

Because of being equipped with an external touch screen, when turning off the screen, Taichi was like a sleek luxury mirror laptop.
