

Configure Dragon Ball: Kakarot PC

This is the level of Dragon Ball Kakarot configuration on your PC for reference, along with that you will have more options on graphics cards for this game.

Immediately after the success of Dragon Ball FighterZ launched in 2019, Bandai Namco continued to launch the Dragon Ball Kakarot project. Unlike many game titles "Dragon Ball", Dragon Ball Kakarot is not a pure fighting game but an action adventure game - open world.

You will play the role of our main character, Son Goku or Kakarot depending on how you call. The main missions of the game will allow you to be part of the Monkey Story. The game also has a secondary task system to help gamers promote their creativity and have compelling experiences.

The next thing that gamers are interested in Dragon Ball Kakarot is the graphics, if compared to the game's graphics compared to previous predecessors, the graphics of Dragon Ball Kakarot is not much better. Here is the configuration game Dragon Ball Kakarot on PC.

Minimum configuration Dragon Ball: Kakarot PC

1. **Operating system:** Windows 7 64bit and above
2. **CPU:** Intel Core-i5-2400 or AMD Phenom II X6 1100T
3. **RAM memory:** 4GB
4. **Graphics Card:** Nvidia Geforce GTX 750 Ti or AMD Radeon HD 7950
5. **Free memory:** 36GB
6. **DirectX:** Version 11

Recommended Dragon Ball configuration: Kakarot PC

1. **Operating system:** 64-bit Windows 10
2. **CPU:** Intel Core i5-3470 or AMD Ryzen 3 1200
3. **RAM memory:** 8GB
4. **Graphics Card:** Nvidia GeForce GTX 960 or AMD Radeon R9 280X
5. **Free memory:** 40GB
6. **DirectX:** Version 11

According to the configuration of Dragon Ball Kakarot above, it is not too heavy when just owning Geforce GTX 750 Ti graphics card is able to play Dragon Ball Kakarot smoothly with 30 FPS in Medium Setting.

If you want to adjust the settings to higher or Ultra, you should use GTX 960 graphics card or otherwise use GTX 1060 3GB. With AMD Radeon cards, you only need RX 570 or RX 590.
