

# Configure Mobile Alliance and how to choose the player

In this article, you will specify the minimum configuration to play Mobile Coalition and how to help you choose a mobile device to play mobile

Which phone can play the Coalition? This simple question was asked by many gamers when preparing to buy a smartphone for themselves. Not only for work but also for entertainment purposes.

The Mobile Alliance configuration is not heavy and most phones meet the minimum gameplay. But if you want to smooth out the Mobile Federation at the best graphics level, you should consider choosing the phone configuration.

And to help gamers have the best experience, below, Quantrimang will send you hardware configuration parameters so you can choose the smartphone that meets the configuration of Mobile Union.

1. Configure play Warhammer: Chaosbane on the computer
2. Smooth play configuration LOL, configure League of Legends play on the computer
3. Call of Duty: Mobile configuration

## Mobile Inter-Player configuration

### 1. Minimum configuration of Mobile Interoperability

For Android devices:

**Processor:** 4 cores clocked at 1.2 Ghz or higher  
**RAM memory:** 1 GB  
**Android operating system:** Android 4.0.3 or higher  
**Free space:** 2 GB available or higher

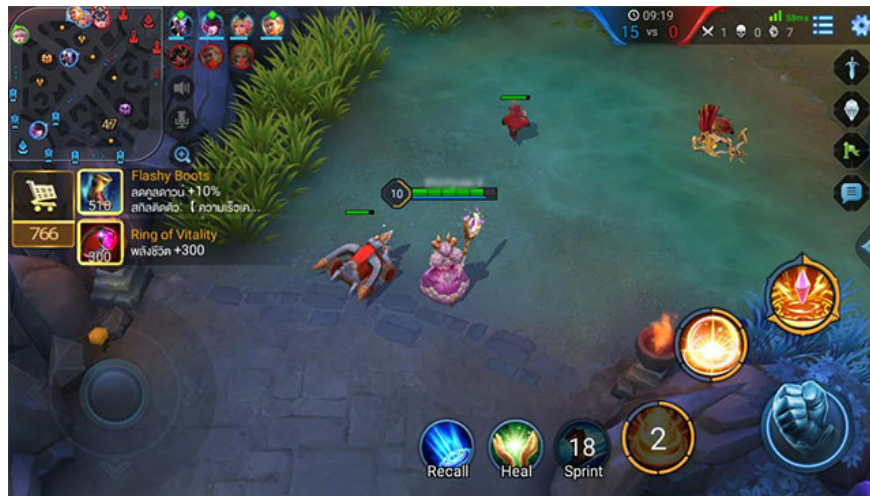

With the above minimum mobile intermittent configuration, you will have a pretty laggy experience when crowded and using skill effects. The image is of course low.

#### **For iOS devices:**

**Device:** iPhone 5 or higher  
**Operating system:** iOS 7 or higher  
**Capacity:** 2GB available or more

Also playing Military on the iPhone will certainly be better with the configuration as above of Android. You just need an iPhone 5s or iPhone 6 to play very smoothly Lien Quan Mobile on your phone.

## **2. Configure recommended to play Smooth Mobile Military Union**

#### **Android device**

**Processor:** 4 cores 2.5 Ghz or 8 cores  
**RAM memory:** 2 GB  
**Android operating system:** Android 4.4 or higher  
**Free space:** 2 GB available or higher

The key to choosing a CPU and RAM is the most important. The fact that the higher the processor, the better 3D graphics support, the more stable and smooth game operation.

#### **IOS device**

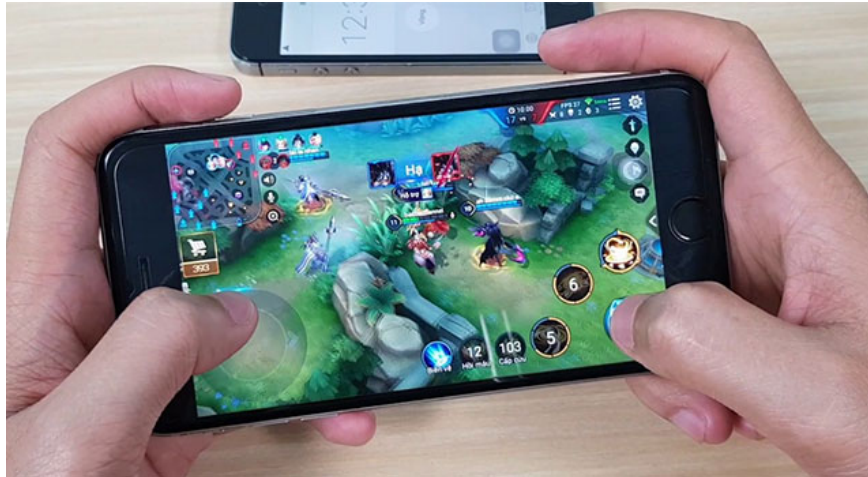

**Device:** iPhone 6 or higher  
**Operating system:** iOS 7 or higher  
**Capacity:** 2GB available or more

Because it is better optimized on iOS platform, so with iPhone, only iPhone 6 and above is smooth.

Based on the configuration of the above requirements of the Inter-Mobile Mobile, you can select hardware configurations that are sufficient to meet the Mobile Coalition graphics. Here is how to choose the machine to play interoperability at the price.

## **How to choose smartphone to play Mobile Union**

### **Price segment under 3 million**

Currently smartphone segment from 3 million down you have a lot of options. But please prioritize Snapdragon to have a GPU that can handle the Coalition.

Specifically, you should choose from the Snapdragon 425. Or else choose Mediatek MT6750 - MT6762R. RAM is mostly 2GB and 3GB at this price, no worries, the battery with 3,000 mAh battery is the best.

If you choose an old iPhone, you will have 5, 5S, and iPhone SE, but the screen will be small.

### **From 3 to 5 million**

This segment is not to say, you will have more advanced processor options such as Snapdragon 660, Kirin 710, Mediatek Helio P35 . RAM is now 3, 4 GB so this is not a problem. The full capacity of the battery from 3,000 mAh becomes with Android series.

If you like the iPhone, you will be choosing iPhone 6 Plus, if you choose a smaller screen then choose iPhone 6s, of course choose iPhone is to choose the old goods.

The above is the minimum configuration to smooth play Inter Military Mobile, as well as how to choose the machine according to the price segment to play smoothly Mobile Union. If you are about to buy a Smartphone to plow the game, please refer to the most suitable device.
