The iPhone screen showing a blurred keyboard makes many iFans feel worried and don't know how to solve this situation? Don't panic, immediately read the measures shared by TipsMake below!

No matter how good a smartphone is, sometimes it has some problems during use. It could be because the user has not set up the device correctly, or the phone has been dropped, broken, exposed to water. or many other reasons, causing the device to 'crash'. Among them, the problem of iPhone screen showing blurred keyboard is also very common. To help you overcome this situation, immediately read the phone tips shared below.

Instructions to fix the iPhone keyboard problem

There are many causes for the problem of iPhone displaying a fuzzy keyboard. It could be that the device has a screen burn-in error, or the phone is having some problem. To handle this case, below are the tips you should apply:

Explain the phenomenon of image retention on the iPhone screen

The iPhone displays a blurry keyboard, most likely this is an error of saving images on the iPhone screen (also known as burn-in error). Familiar phenomena of this error are screen image retention, color fading, ghosting appearing on the phone screen, screen 'ghosting'. This is the phenomenon of ghosting inserted on the screen when displaying still images in a relatively long time. And this case often occurs with smartphones using OLED screens.

Normally, the phenomenon of image retention only occurs when the user uses the phone continuously for a long time. According to a test on iPhone In some cases, image retention will disappear within a short time. However, if the still image is left for too long, this condition will last forever.

Some other remedies when the iPhone screen shows a fuzzy keyboard

1. Restarting the phone is a simple solution but is used by many people every time the device has a problem. This will help your phone become stable again, run smoother and fix small errors for unknown reasons.
2. In case your iPhone displays a blurred keyboard, you will be annoyed with this error. The best way is to replace the iPhone screen. Note that you should go to reputable repair centers to ensure replacement with a quality screen.

Although the way to fix this situation is to affect the hardware. But you can rest assured because this case is a bit unlikely because it requires continuous use for a long time. Besides, to limit this situation, users can take measures such as: avoid displaying still images for too long, and use a dark interface for the phone. In addition, iFan should use a screen with moderate brightness (not maximum) and reduce screen timeout. This not only minimizes the problem of screen image retention errors but can also increase the life of your phone.

Above is some information about cases where the iPhone screen shows a blurred keyboard. Hopefully you have a better understanding of this problem and have appropriate solutions.
