

Guide to building research content on Consensus

Consensus is an intelligent academic search platform that allows users to ask questions directly and receive answers compiled from numerous reliable scientific studies.

Consensus is an intelligent academic search platform that allows users to ask questions directly and receive answers compiled from numerous reputable scientific studies. Instead of reading dozens of individual articles, users can quickly grasp trends, key conclusions, and academic consensus on a specific issue. This significantly shortens research time while improving the quality of analysis. Below is a guide to building research content on Consensus.

How to build research content on Consensus

Step 1:

We access the Consensus website using the link below.

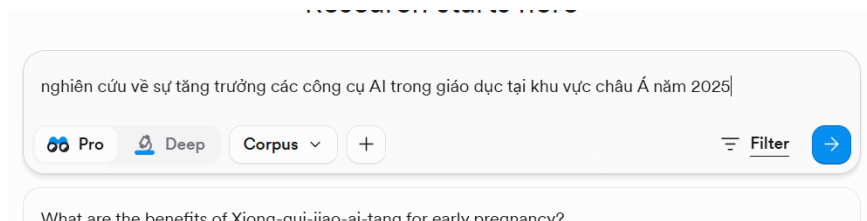

<https://consensus.app/>

Then you proceed to register using your Google account to use it.

Step 2:

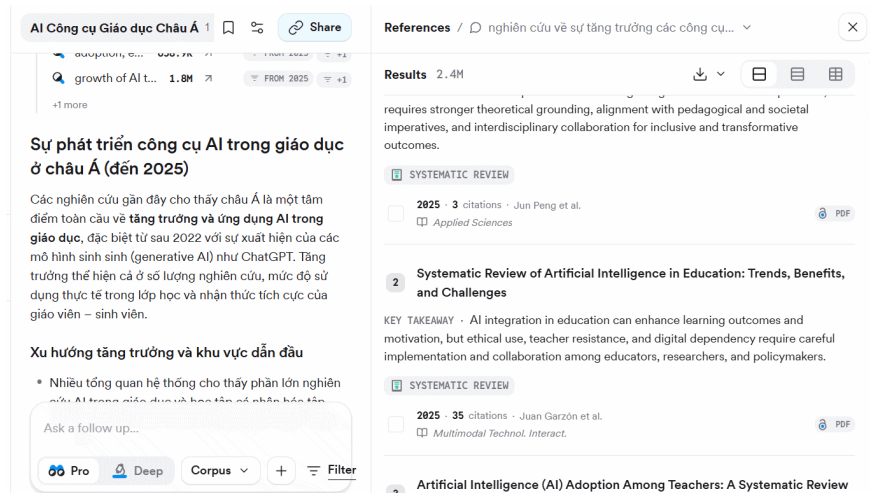

Go to the main Consensus interface and **enter the content you want to research**, or even the experience-sharing project you need to develop. You need to clearly write the name of the research topic; refer to the prompt below.

Step 3:

Then you will see Consensus respond with full references, making it easier for us to read additional documents needed for the research we are developing.

In the References section, you'll find direct links to those documents and can save them as references. You can also change the arrangement of the references using the three options above.
