

# Convert black and white photos to color in the blink of an eye

To restore black and white photos, some photo editing techniques are also needed. If you are not familiar with photo editing, you can immediately use online photo editing tools.

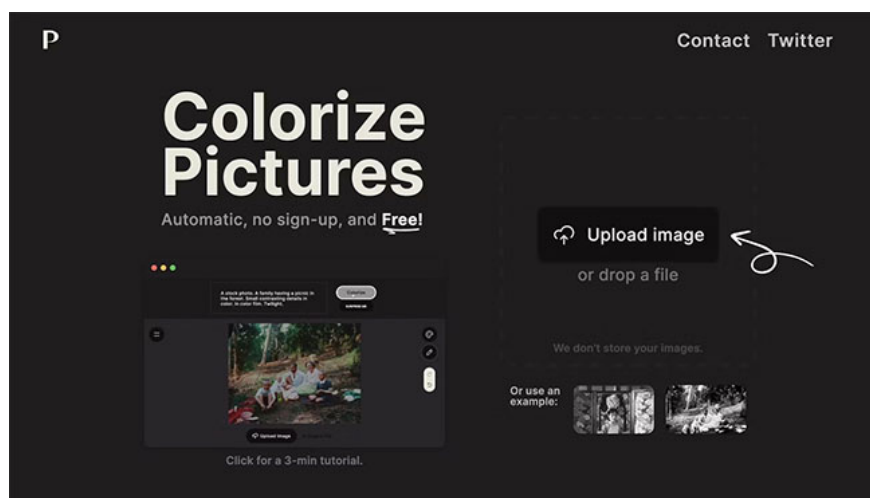

Some of these websites will use artificial intelligence to process your black and white image and provide us with the color scheme you want to apply to the image. Then users will have more eyebrow photo options. The article below will guide you on how to restore black and white photos.

## Restore black and white photos to color with Palette.fm

Palette.fm is a free artificial intelligence (AI) tool that turns black and white photos into color. Thanks to Machine Learning capabilities, it can determine what is in an image and make predictions to apply the right color. If you have never restored color to black and white photos before, the results will amaze you!

Unlike other AI color tools, images can be tweaked using text prompts or by choosing a different color palette. If you have some old black and white family photos, here's how you can bring them to life in just a few minutes.

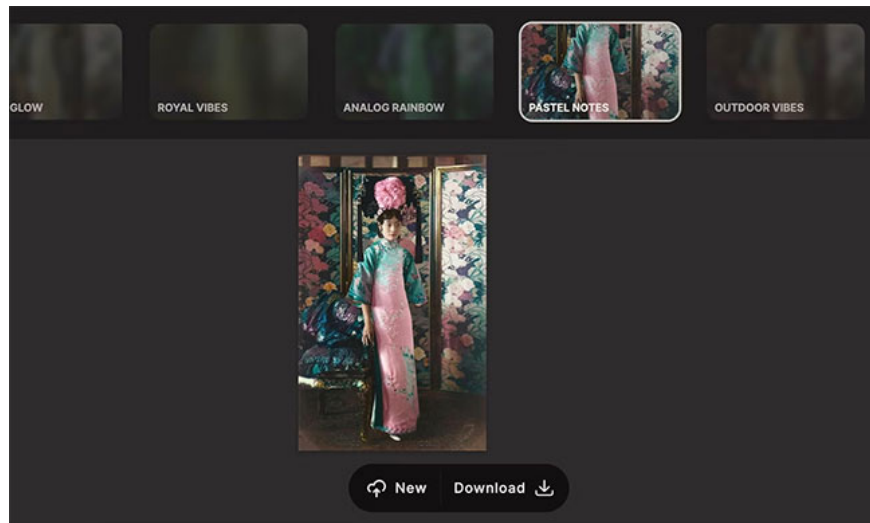

There are plenty of other AI tools that can add color to black-and-white photos, but none have a website as easy to use as Palette.fm. You don't need to register before getting started, just drag and drop files or click **Upload image**.

Get ready to scan and digitize some black and white photos to prepare, or use one of the examples provided if you just want to try it out for fun.

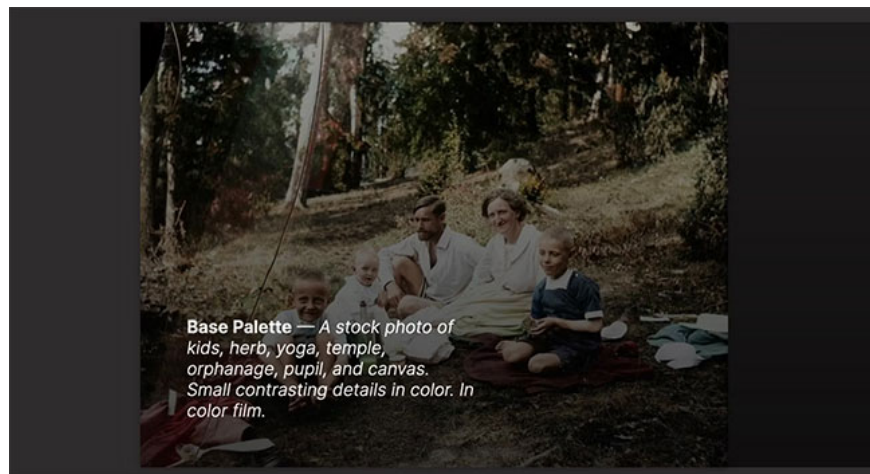

Once the image has been uploaded, it will appear in the editing window. The default color profile is called **Base Palette**, but try seeing another style by clicking one of the profiles at the top. There are plenty to try, with names like **Faded Elegance**, **Lively Floral** and **Colorful Memories**.

**The Base Palette** usually works best, but there are times when the colors are too saturated.

As mentioned, you can also instruct the AI color generator by editing text prompts (more on that in the next section). When you are satisfied with your work, click the download button below the image to save it to your computer.

## How to fine-tune results

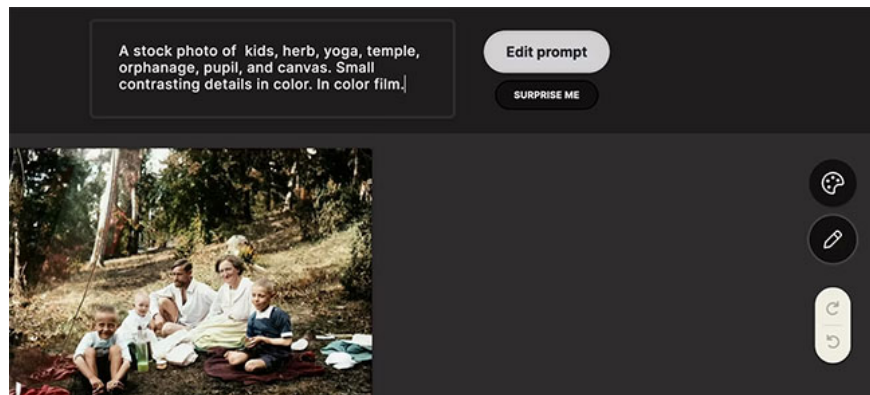

AI doesn't always do everything perfectly, which is why Palette.fm lets you fine-tune images by editing text descriptions.

Start by hovering over the image to see how the AI system described the image in the first place. This reveals what the AI identified in the photo, and in this case, it correctly showed that the photo contained people and a forest.

However, when trying to color the same image a second time, the result is completely different. There are many innovative areas where AI is accelerating. But in reality, AI can help you get 90% of the way, and the final 10% still depends on you.

## Edit text prompts

We want to help the AI determine exactly what's in the photo so it can apply the most appropriate color. To display the text editor, click the pencil icon to the right of the image.

If you look at the two photos side by side, you can see that more green has been added to the forest - and the objects in the picnic scene are colored in more detail.

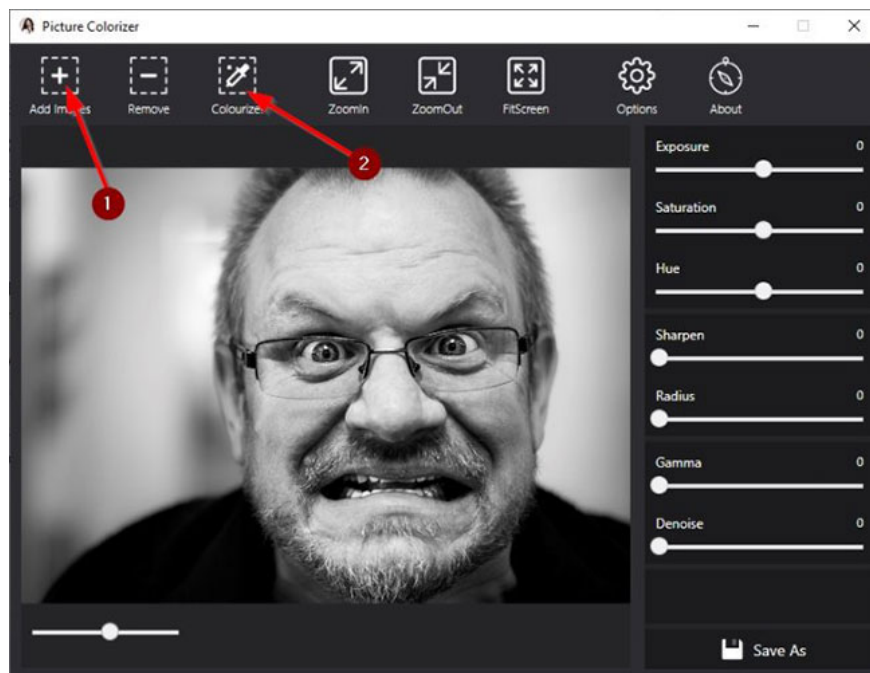

It took a few tries to see which text would help improve the color. Use the arrows on the right to help with this by moving back and forth between different attempts.

Additionally, there is a button called Surprise Me that will automatically create a new description. Sometimes the results are so random that they will make you laugh, but even if they are incorrect, you may still like the color choice used as a result.

## Turn black and white photos into color photos with Picture Colorizer

### Add photos and color

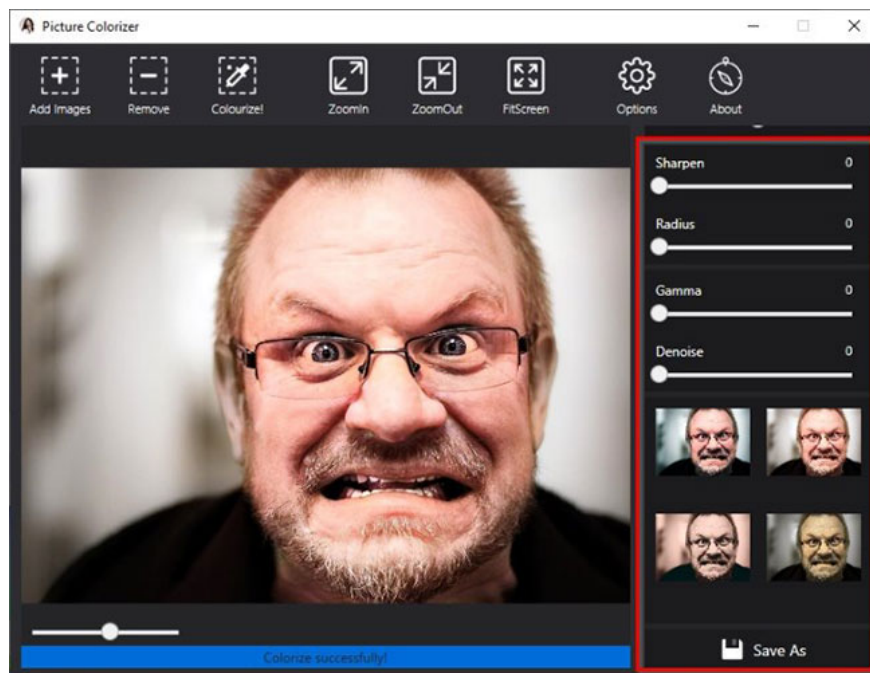

The first thing you will need to do here is add the required image to the editing area. Do this by opening **Picture Colorizer** , then clicking the **Add Images button**.

From the screenshot above, you can see that the article has added a black and white photo of a white man, so what do we do next? Very simple. Just click the **Colourize** button , then wait for the image to be uploaded and converted.

The entire process depends on the size and complexity of the image as well as the speed of your Internet connection. Remember that a constant Internet connection is required, otherwise the program will not work as intended.

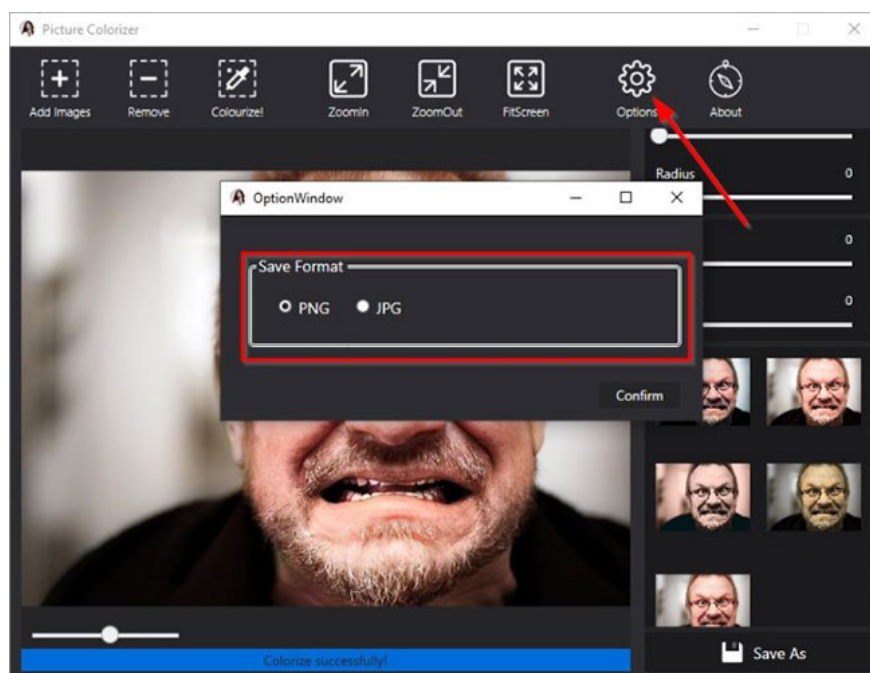

## **Finished product**

When image processing is complete, you'll see your image in color, but that's not the end. You see, on the right side of the tool, there are a series of options that allow users to edit photos. Scroll down to see different filters for recently converted images.

Choose a filter that suits what you want, then click the **Save** button to save the photo to your hard drive.

## Change the save format

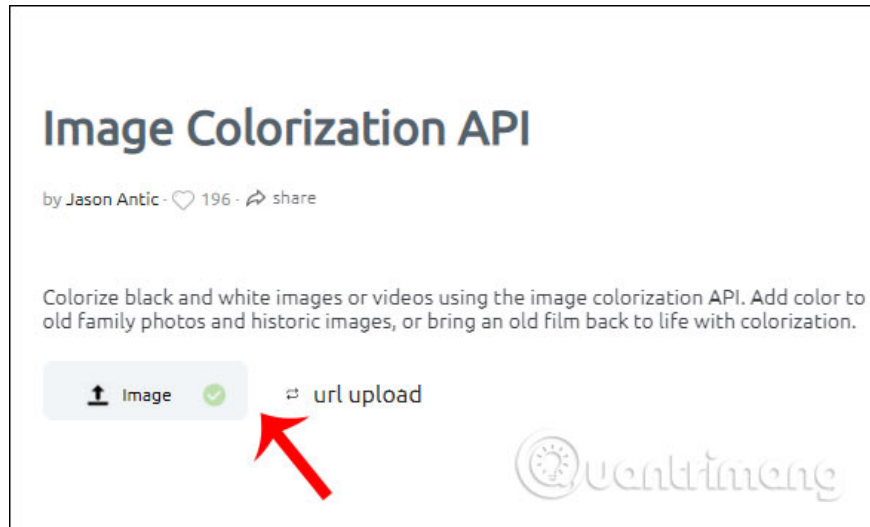

By default, all images will be saved in PNG format, but you can change it to JPG format.

To do this, click the **Options** button , then select **JPG** and press **Confirm** to begin making changes.

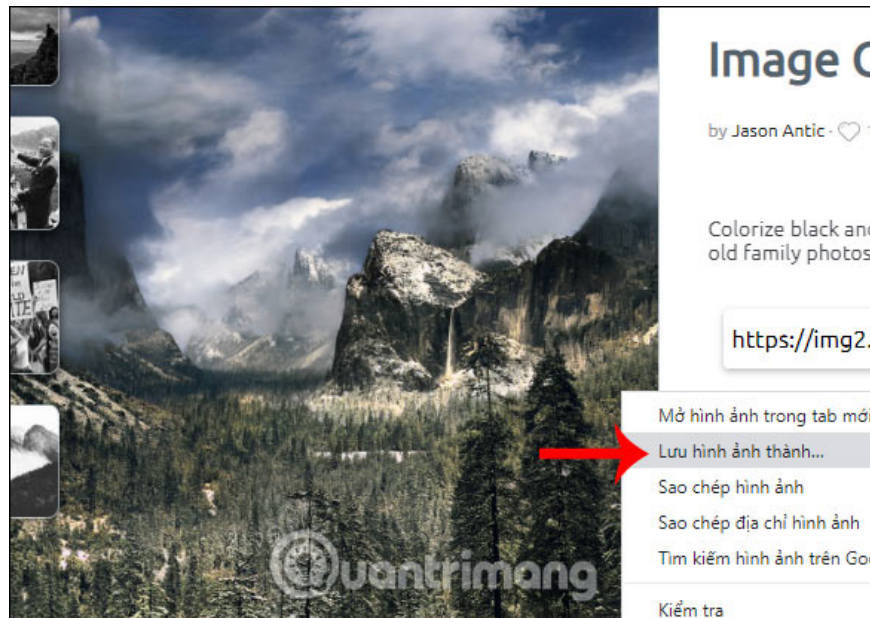

You can download Picture Colorizer from Imagecolorizer.com.

## Turn black and white photos into color photos with DeepAI

Access **the Image Colorization tool** to change the color of black and white images. Here, you see there are 2 options for uploading images, including using the URL to download images directly or uploading to download images available on your computer. When uploading a photo, the website automatically analyzes the photo and converts the color to black and white photos.

As a result, we get a colored image as below. The website has done a good job of analyzing image areas to choose the right color for each detail. We right-click on the image to click save as usual.

## Convert black and white photos to color with AI Colorize Photos

The AI ??Colorize Photos application is equipped with the Colorful Image Colorization algorithm that can analyze image content and color, thereby selecting suitable color patches for the image.

### Step 1:

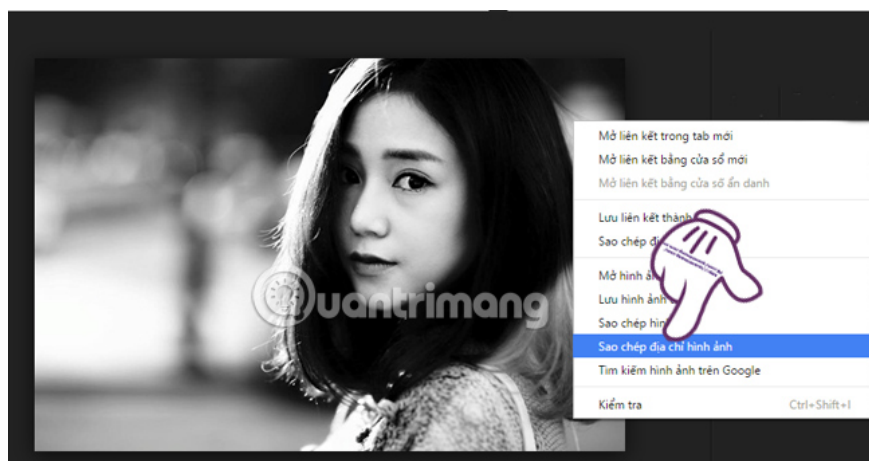

First, click on the link below to access the Colorize Photos website to edit photos online, turning photos from black and white photos into color photos.

<http://demos.algorithmia.com/colorize-photos/>

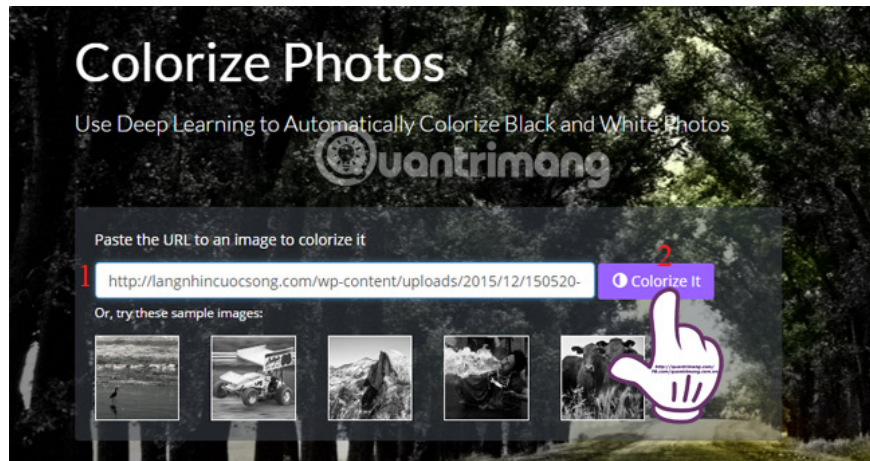

### Step 2:

Then, we will **copy the image's URL link**.

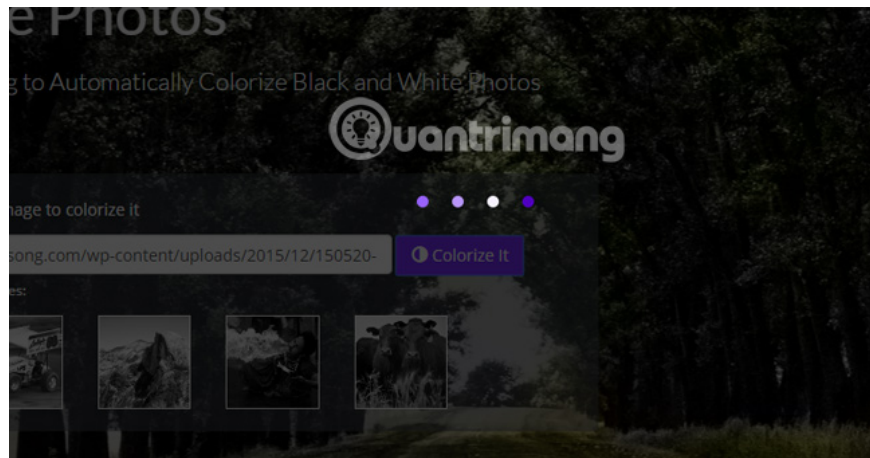

Next, paste into the **Paste the URL to an image to colorize it** section . Then press the **Colorize it** button next to it.

### Step 3:

We wait for the application to process the image for a few seconds.

Immediately after that, scroll down to see the results. The image will be divided into 2 parts: **the original black and white image** and **the resulting color image** displayed in parallel. We can **move the purple vertical bar** to see photo editing in real time.

The photo will automatically change to color or black and white in the direction we move the purple bar. On the left will be your original black and white photo and on the right will be the color image of the result.

## Photo Colorization Before and After

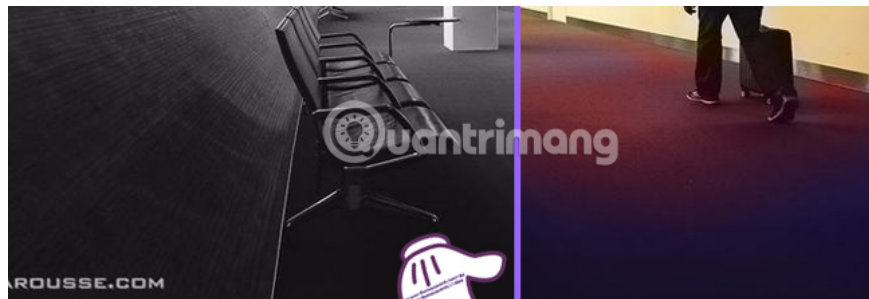

Drag the purple line to reveal the before and after

### Step 4:

Right below the image there will be two parts: **Download Comparison** downloads comparison images and **Download Colorized Image** downloads color images.

If you like to choose a type of image download, click on that download item.

Drag the purple line to reveal the before and after

[Download Comparison](#) [Download Colorized Image](#)

[Tweet](#) [Share](#)

Quite useful, right? Now you can add color to any of your black and white images with the AI ??Colorize Photos app. The process is quick and photos can be downloaded in two ways, helping you get the photo you want.

## Convert black and white photos to color photos with PicWish

PicWish is another online tool that helps turn black and white photos into color photos easily. This tool turns your old photos into a new creation with natural colors, giving them a new look completely free of charge.
