

Convert video formats for Android, iPhone and PSP with Miro

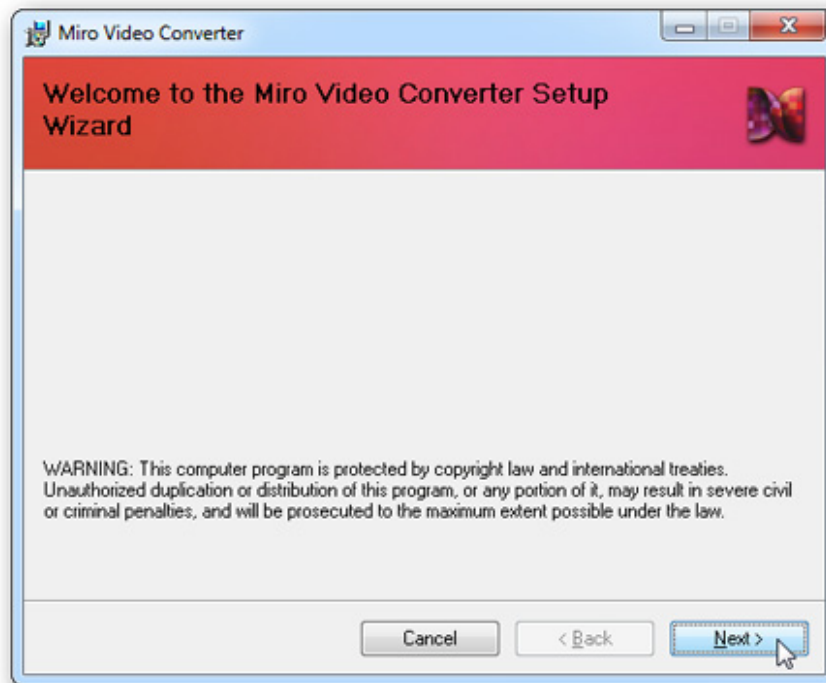

You are looking for a fast video format conversion program for iPhone, PSP, or Android devices ...

TipsMake.com - You are looking for a fast video format conversion program for iPhone, PSP, or Android devices. In the following article, TipsMake.com will introduce you to Miro Video Converter application .

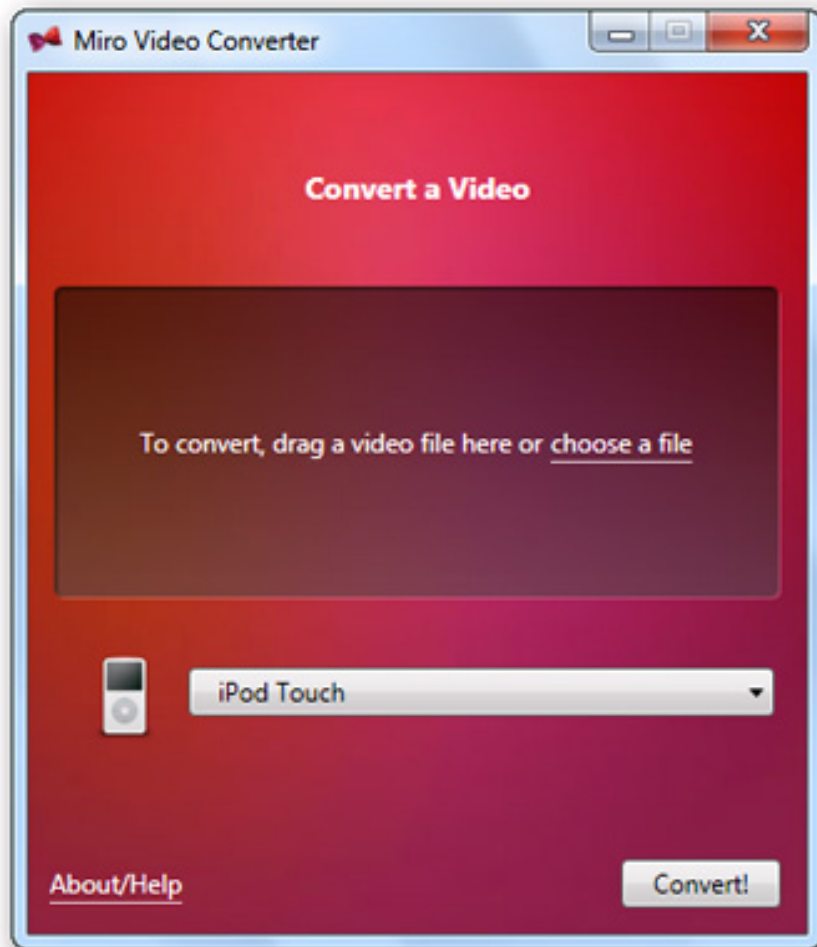

Miro download path for Windows here.

Installation Instructions

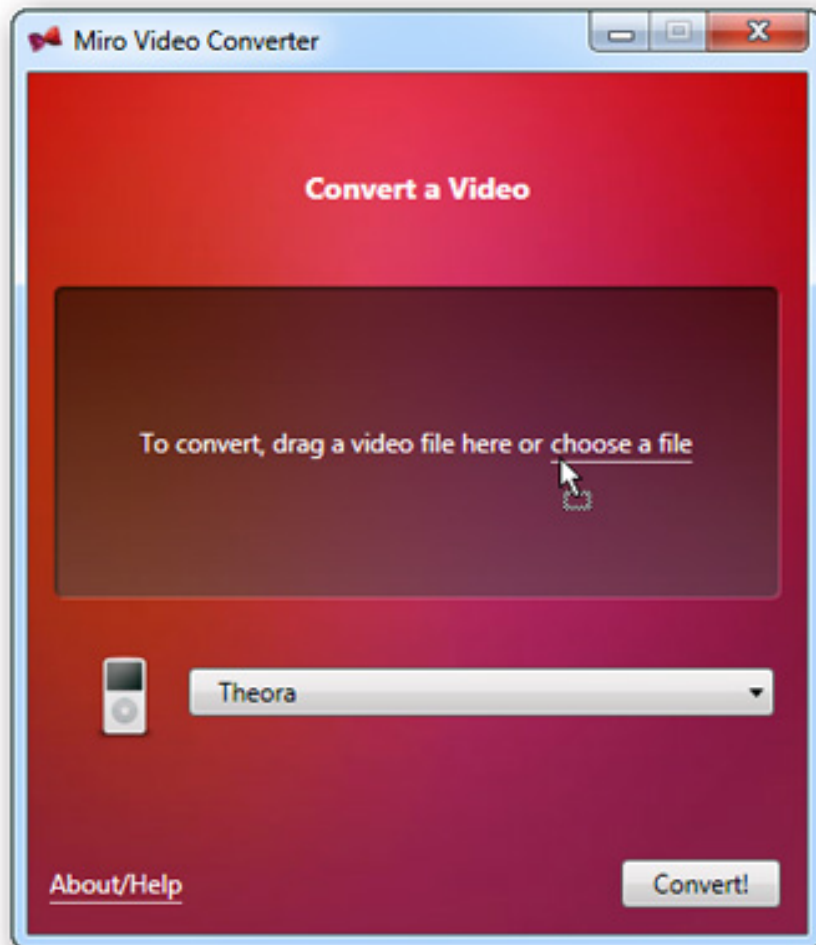

Extremely simple, just select the right version for the operating system you are using (currently available for Mac and Windows versions):

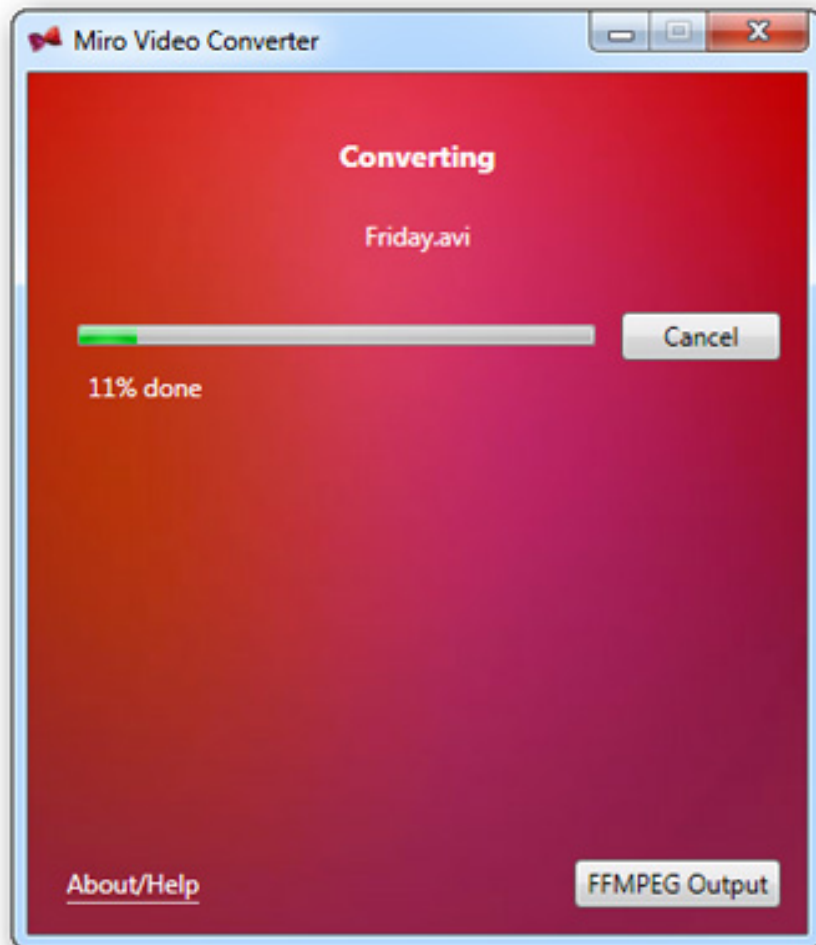

This is Miro's interface after installation is complete:

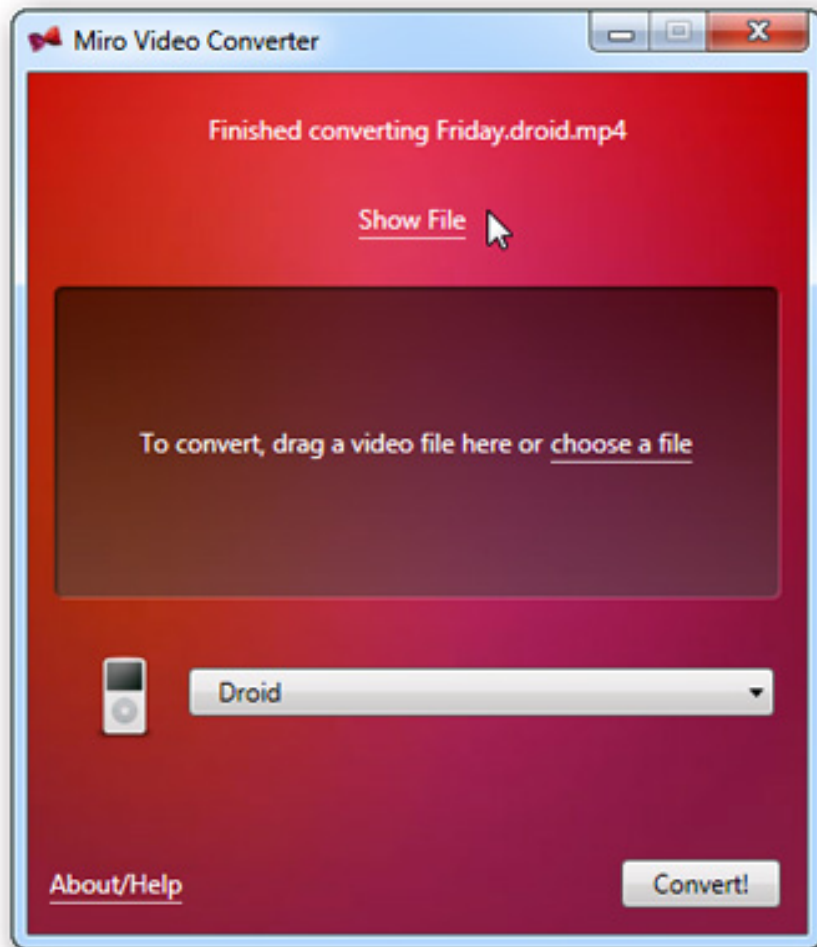

You can see, it can't be simpler. Just drag and drop the source video file to convert, select the output that matches the user's product:

After selecting the appropriate elements, click the **Convert** button to start the format conversion process. Depending on the speed of the system and the size of the source video file, the process will be quick or long, usually to convert the source file from 700 MB to 1 GB takes about 15-20 minutes:

The product file will be placed in the same folder as the original file, Miro will automatically add the format to the product file name. For example, when converting a Friday.avi file for Android, the result will be *Friday.droid.mp4* :

The next thing is to just copy the file to your mobile device:

Since Miro version 2.4 and above, product file quality after format conversion has become much better than previous versions. On the other hand, you can only convert 1 file format if done directly on a CD or DVD drive.

Good luck!
