

# Copy photos, music, and movies to your iPhone using Send Anywhere without iTunes or iTools.

With conventional data transfer methods, we usually connect the iPhone via a USB cable and use tools like iTunes, iTools, etc., to copy music and movies between the iPhone and the computer. But with Send Anywhere, you can copy photos, music, and movies to your iPhone without using iTunes, iTools, or complicated cables.

As its name suggests, Send Anywhere can send data from anywhere with an internet connection. You can copy photos to your iPhone or videos, contacts, or document files to a place hundreds of kilometers away with just a few simple steps.

Copy photos to iPhone using Send Anywhere, copy music and videos to iPhone using Send Anywhere.

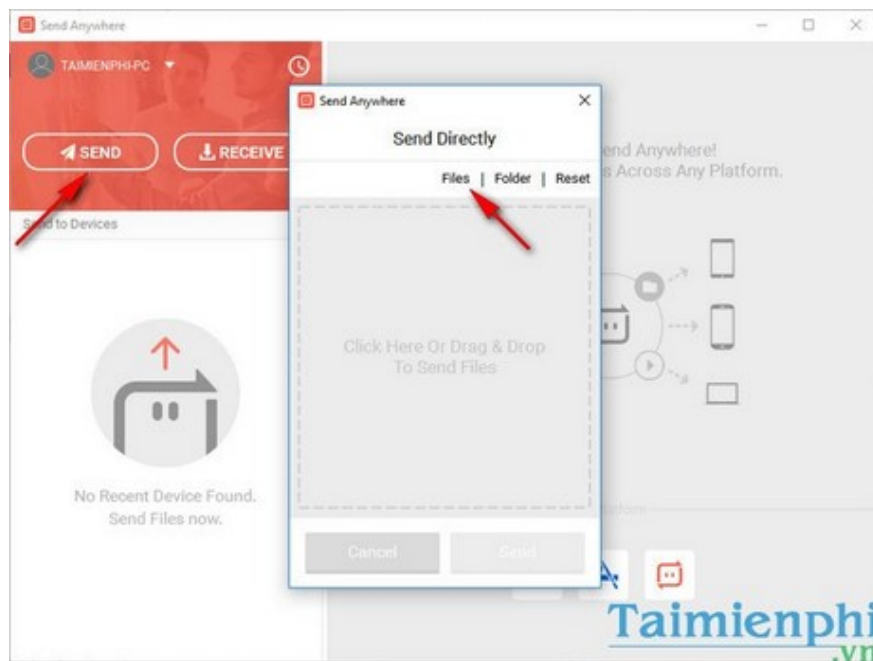

## GUIDE TO COPYING MUSIC, MOVIES, AND PHOTOS TO IPHONE USING SEND ANYWHERE

To be able to exchange data between your computer and iPhone, both devices need to have **Send Anywhere installed**.

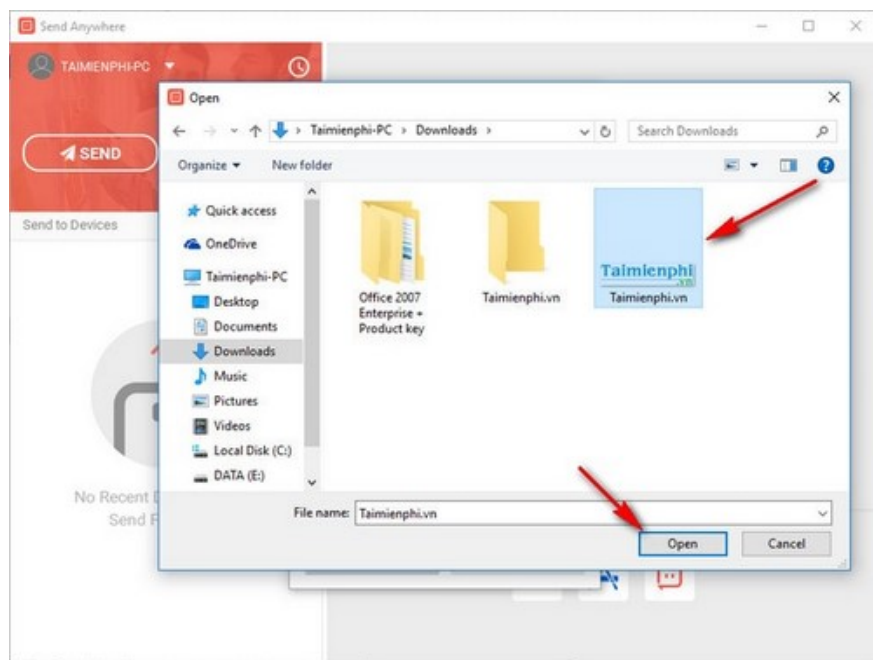

Download Send Anywhere here: [Download Send Anywhere](#) .

Download Send Anywhere for iPhone here: [Download Send Anywhere for iPhone](#) .

*Step 1:* Open the Send Anywhere tool on your computer. To copy photos to your iPhone using Send Anywhere, select **Send**, then you can choose to send files or folders.

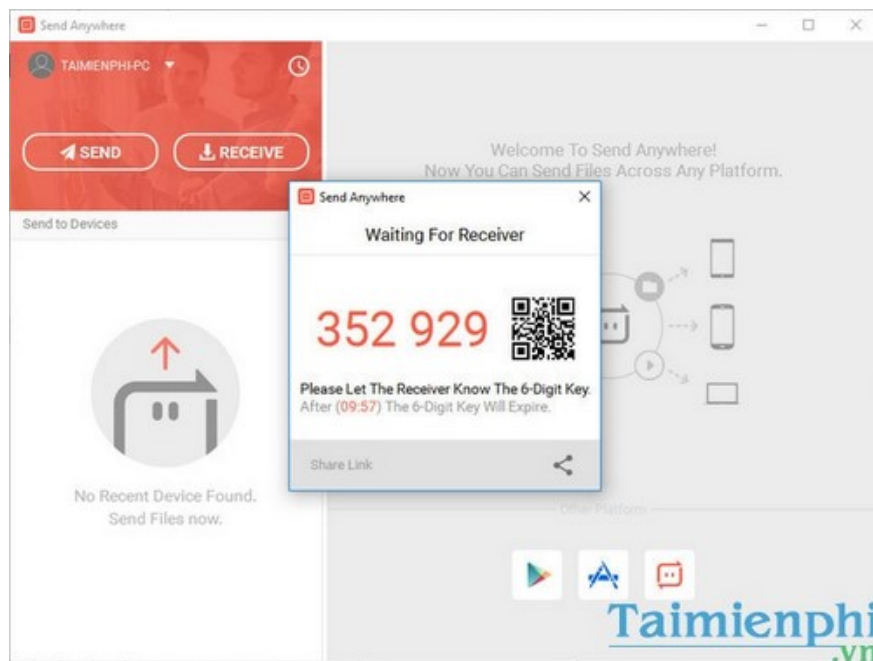

*Step 2:* Select one or more files to send, then click **Open** to upload the files to the tool.

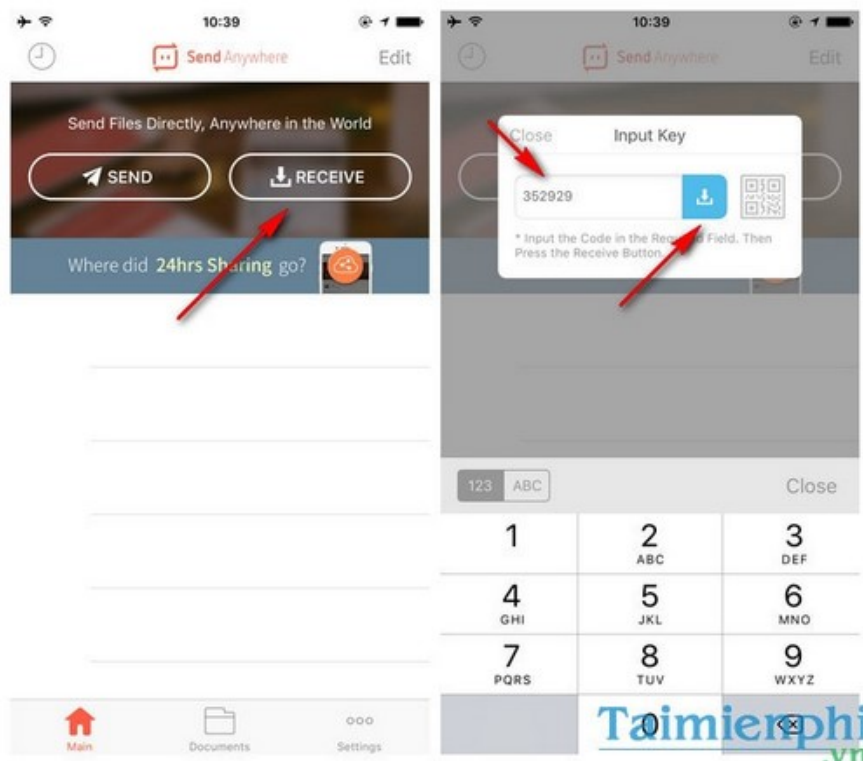

*Step 3:* The tool will provide you with a **6-digit code** (as shown in the image). Use this code to enter into the Send Anywhere app installed on your iPhone.

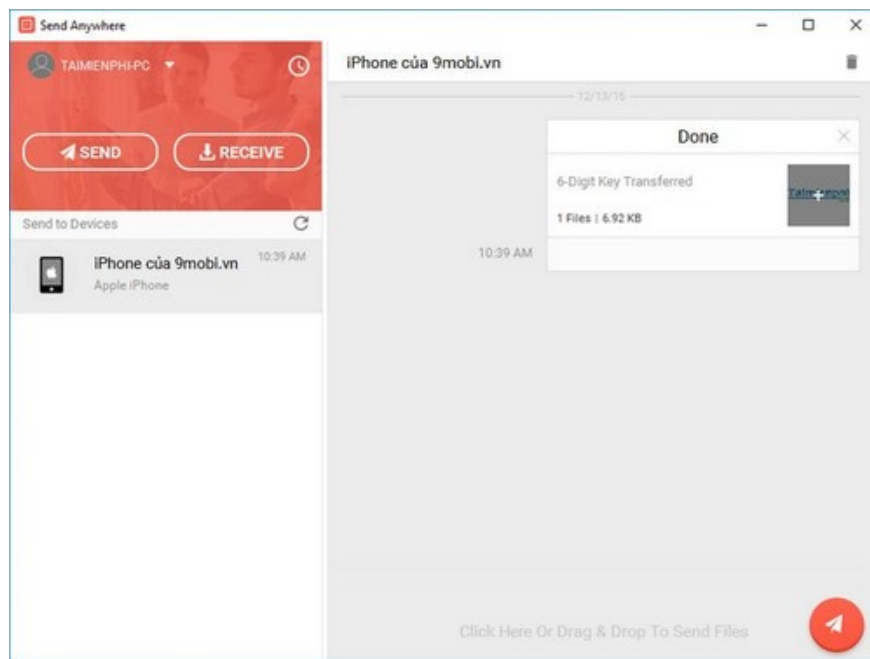

**Note:** Each sequence of numbers will only be available for 10 minutes.

Step 4: Access the app on your iPhone, select **Receive** to receive the data, **enter the 6-digit code** that Send Anywhere just provided, then select the download icon and wait a moment. You will be able to copy the photos to your iPhone very quickly using Send Anywhere.

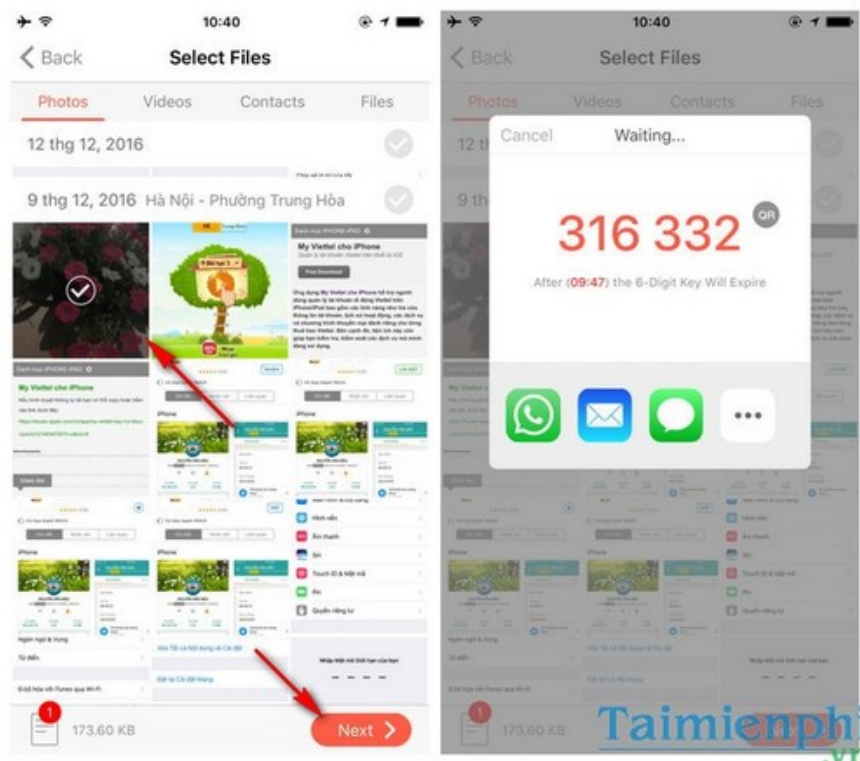

The app will notify you that copying photos to your iPhone using Send Anywhere was successful.

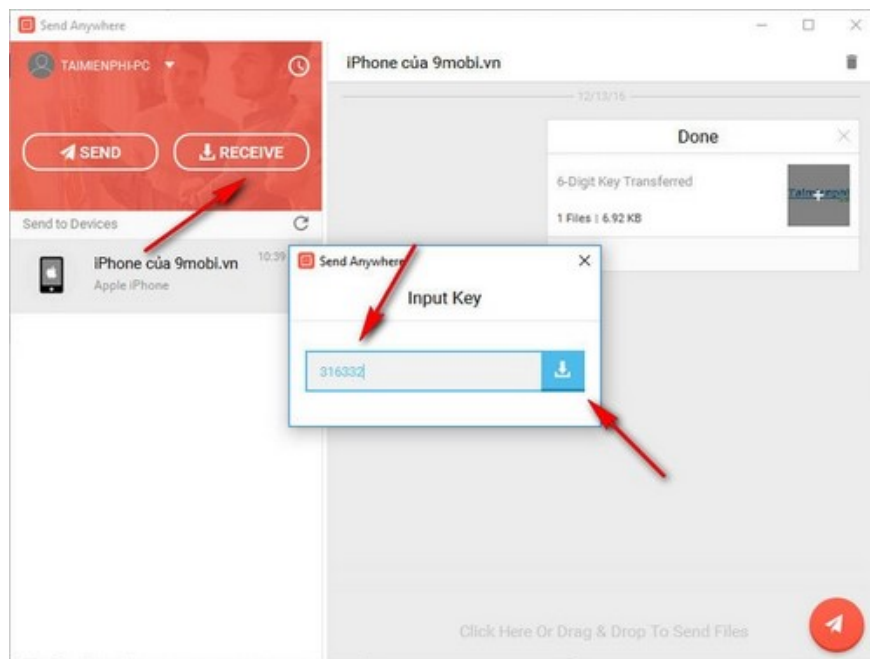

Besides copying photos to your iPhone using Send Anywhere, you can also send data from your iPhone to your computer using the same method.

*Step 5:* On the main interface of the application on your iPhone, select **Send**, choose the photos, videos, and files you want to send to your computer, and select **Next**. The application will then provide you with a 6-digit code.

*Step 6:* Using Send Anywhere on your computer, enter the 6-digit code to receive the data.

You can easily send music, photos, or copy videos to your iPhone using Send Anywhere wirelessly from anywhere to any internet-connected device. However, this tool is quite dependent on the internet connection and the speed of the data server. Therefore, if you use an Android device, you can use AirDroid to transfer data within the same network at a faster and more convenient speed.
