

Corel Draw 12 - Quick drawing

In this exercise, to practice some rectangle drawing tools (Rectangle Tool) we will guide you to draw a basic pinwheel shape.

In this exercise, we use the tool to draw the *Rectangle Tool* and some of the following commands:

- *Rotate* : rotate the object.
- *Trim* : create a third object from two intersecting objects.
- *Mirror* : option to flip objects.
- *Rotate* : rotate the object.
- *Fountain Fill* : color gradation.
- *Shape Tool* : a format tool, used to edit the shape changes of objects.
- *Align and Distribute* : used to compare objects.
- *Tranfrom - Position* : change the object to an exact position on the screen.
- *Convert to Curve* : convert the input object (square, circle, polygon .) into a drawing object to shape the shape with the Shape Tool.

Colouration

- Select the *rectangle tool* , draw a rectangle.
- On the properties bar select the *Object part (s) Size* and for the size of the horizontal rectangle 5 cm, 10 cm long.
- Select *Object - Convert to Curve* .
- Select the format tool (*Shape Tool*), select the upper right corner of the rectangle and press *Delete* , we get a right triangle (Figure 1).

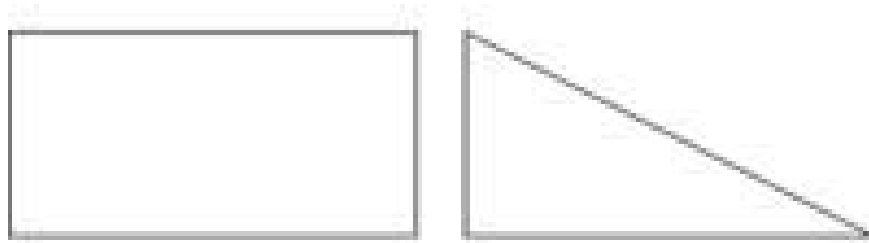

Figure 1

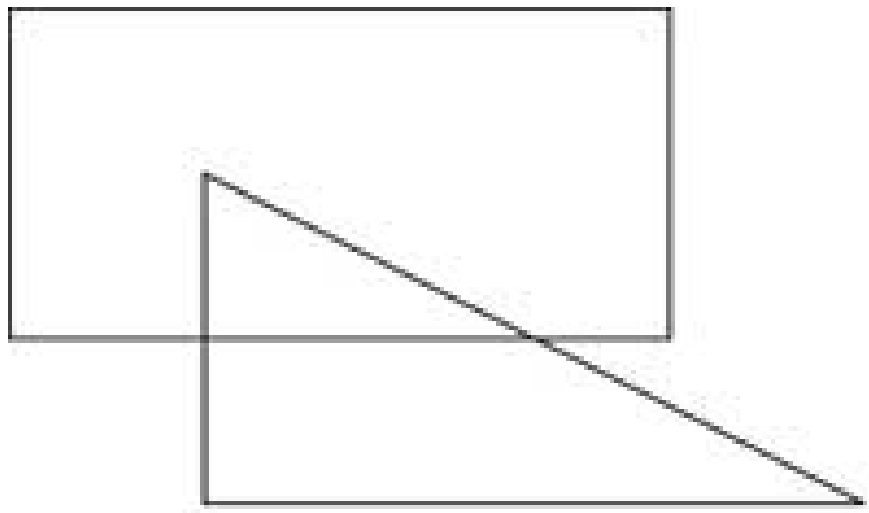

- Draw the second rectangle so that the size is slightly larger than the first one.

- Select *Object - Align and Distribute* :

Align Bottom : looks like two square and rectangular triangles for the bottom.

- Select the rectangle.

- Select *Object - Transformations - Position* : with parameters as shown (Figure 2, 3).

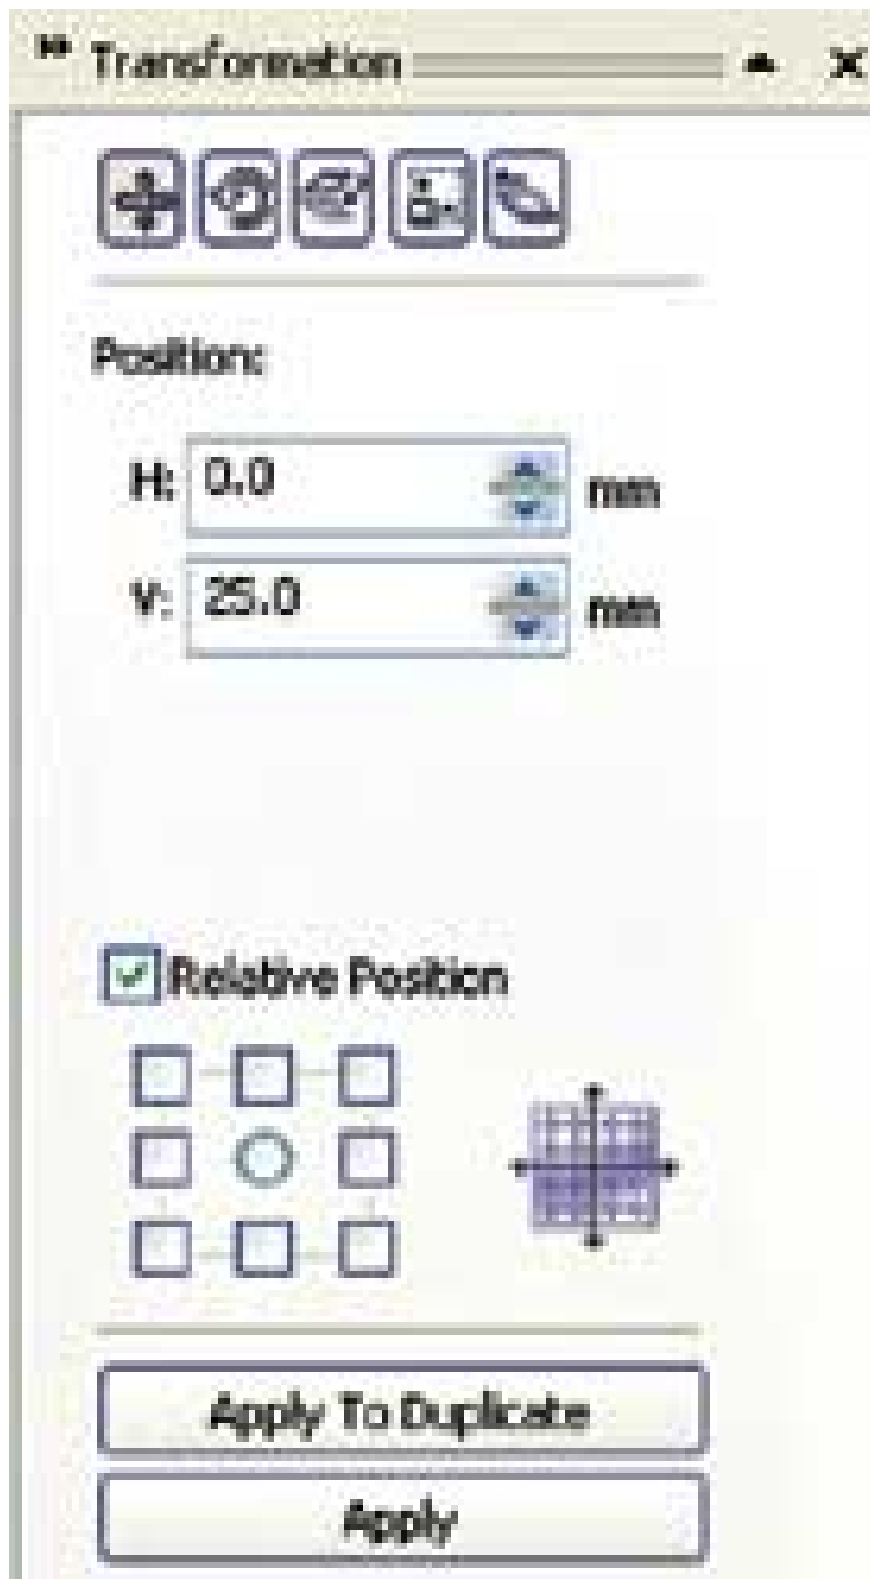

Figure 2 Figure 3

- Choose rectangles and square triangles.

- Select *Object - Shaping - Intersect* , we get the intersection of the rectangle and the right triangle is another smaller triangle (Figure 4).

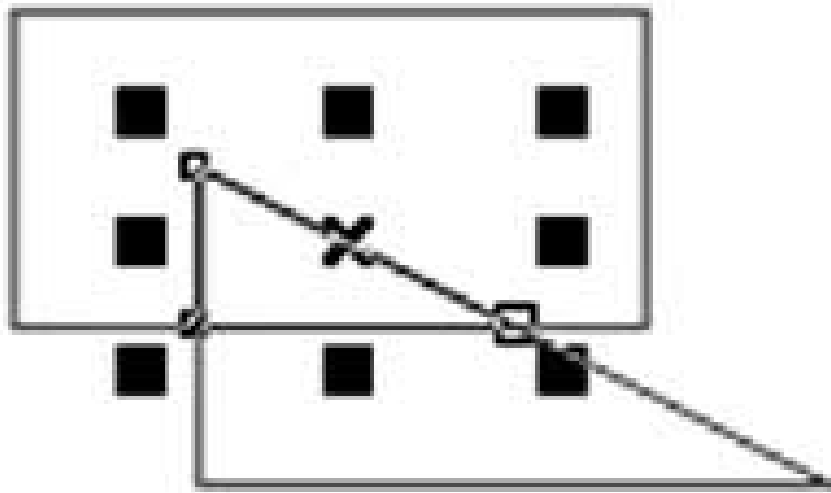

Figure 4

- Choose big rectangles and square triangles.

- Select *Object - Shaping - Trim* , we get the third object is a square trapezoid due to the large triangular cut rectangle (Figure 5).

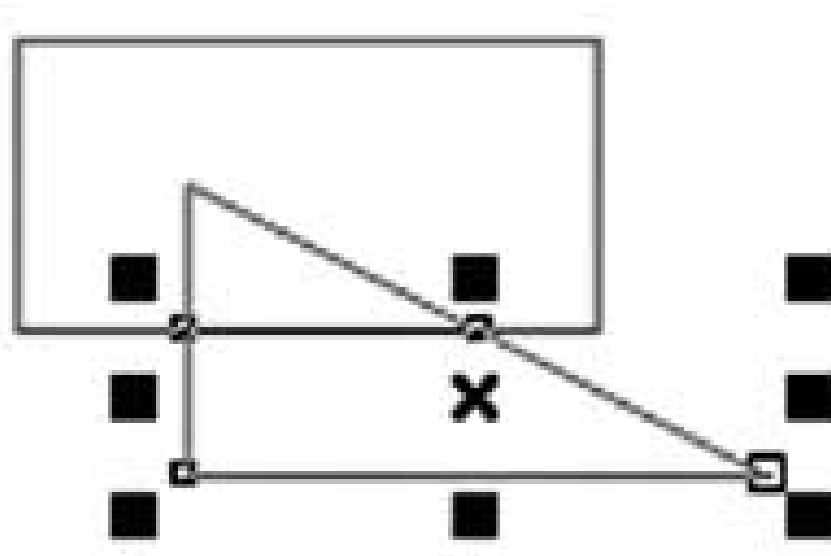

Figure 5

- Select the rectangle click *Delete* .

- Select a small triangle, select *Mirror Buttons* to turn the triangle upside down (Figure 6).

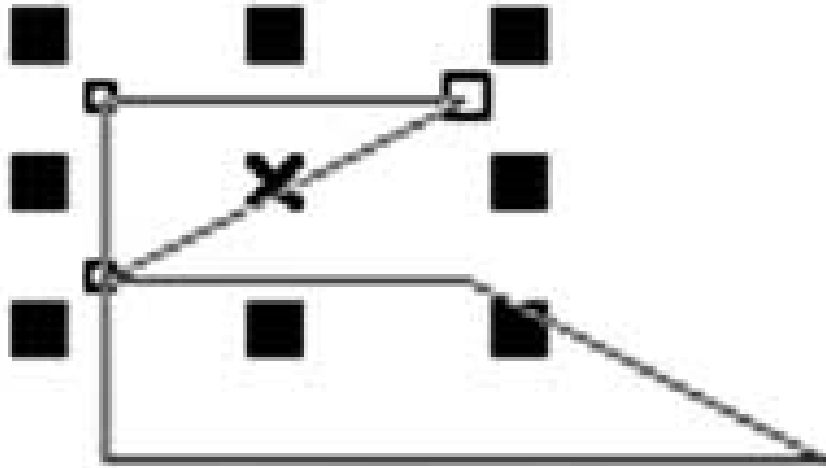

Figure 6

- Choose two large and small triangles.

- Select *Object - Align and Distribute* :

Align Bottom (Figure 7)

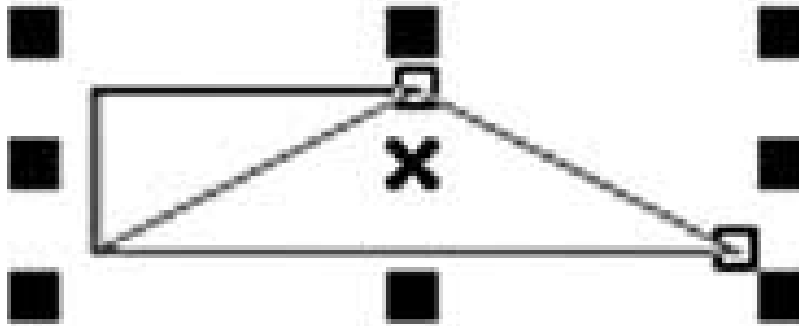

Figure 7

- Select *Fill Tool - Fountain Fill Dialog* , fill two triangles as you like (Figure 8, 9).

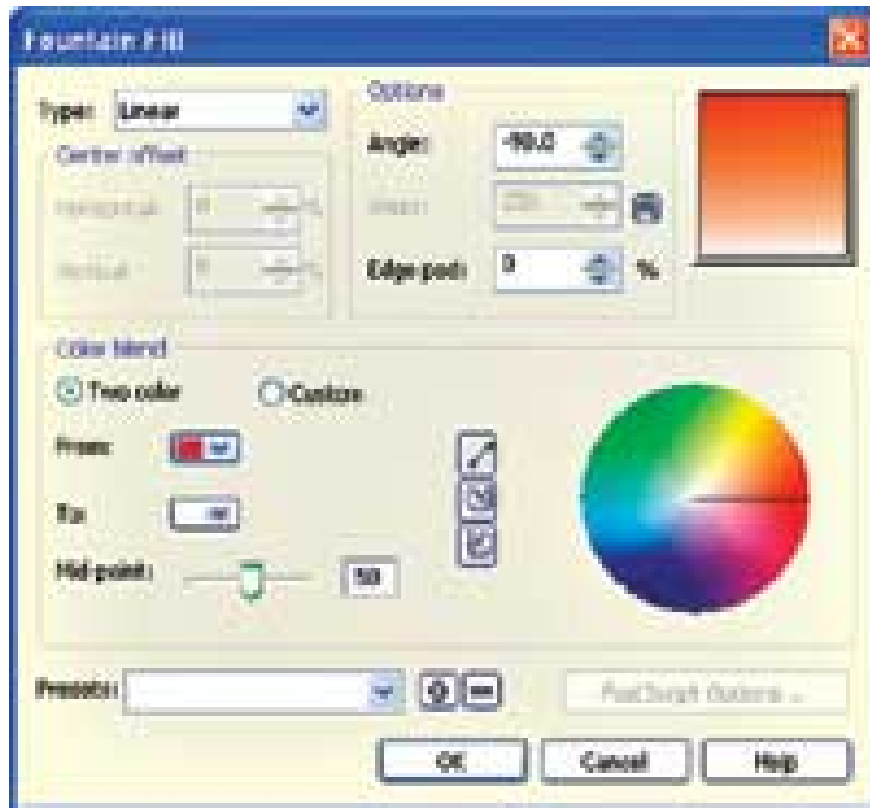

Figure 8 Figure 9

- Object - Group

- Select *Object - Transformations - Rotate* with parameters:

Angle : 90 deg (rotation angle of the object)

Select the center of rotation of the object as the lower left corner (Figure 10).

- Click *Apply To Duplicate* tab 3 times, we get the result as shown in Figure 11.

Transformation

Rotation:

Angle: deg

Center:

H: mm

V: mm

Relative Center

Apply To Duplicate

Apply
