

Corsair Harpoon Review: The best gaming mouse for under \$ 50

Today's article will review Corsair Harpoon gaming mice. This is a mouse equipped with many features and is very affordable. Here's what you need to know about Corsair Harpoon.

Today's article will review Corsair Harpoon gaming mice. This is a mouse equipped with many features and is very affordable. Here's what you need to know about Corsair Harpoon.

Corsair Harpoon mouse design

Harpoon is black, with an ergonomic design that ensures long-term use without fatigue. This is a fairly lightweight mouse (only 91 grams) compared to many gaming mice that **TipsMake.com** has ever evaluated.

The mouse is 11 x 7 x 4cm, neither too big nor too small. However, those with big hands should find a more suitable option.

The appearance of Corsair Harpoon is quite angular, so many gamers love it. The mouse has good slip resistance, even when your hands are sweating.

Harpoon is black, with an ergonomic design

Mouse cord

Corsair Harpoon mice are equipped with a 1.8m long rubber strap (the standard length in the gaming mouse market) and can work very well. Besides, if you live in a dusty place, rubber bands will be easier to clean.

The mouse buttons

In a gaming mouse, nothing is more important than the mouse buttons. Harpoon does not disappoint because it has 6 buttons that you can completely customize. There are normal left / right mouse buttons and DPI switch button in the middle. Forward and back buttons are located on the left side of the mouse, near the thumb rest. Do not have any additional favorite buttons.

Clickable mouse scroll is also a button. As soon as you have installed the software, assign each function button individually.

The mouse has 6 buttons that you can fully customize

Although there are no exact figures, as with the buttons that come with the Omron switch, this mouse has been rated as clickable 20 million times.

While many gaming mice offer two buttons under the mouse wheel to set up DPI, the Corsair Harpoon comes with only one button. However, that button is enough to do what you need.

Efficiency

No matter how many features your gaming mouse has, but if the performance is not as expected, then it is absolutely not a good mouse.

In fact, many gamers say that Corsair Harpoon exceeds their expectations, especially considering the low price it has sold in the market.

1. First, as a wired mouse, the Corsair Harpoon can communicate with computers without latency like a wireless mouse.
2. Secondly, the polling rate is quite high. You can set it at 1000Hz, which means the mouse will report its position to the computer 1000 times per second.

3. Third, the mouse glides very smoothly. Just make sure that the cord doesn't get caught in anything on the gaming table.
4. Fourth, the buttons are very responsive and can avoid accidental touches when not needed.
5. You can adjust the DPI setting on the go because the control button is conveniently located just below the mouse wheel.
6. With the software, you will be able to control almost every mouse function. When you set up profiles for your games, they never disappear unless you delete them on purpose.

Software

As mentioned before, the iCue software is quite responsive and it allows you to completely customize the mouse buttons. The software is easy to use and takes up not too large capacity.

iCue software allows you to completely customize the mouse buttons

On the software control panel, you'll find everything you need to personalize this mouse. Place mouse buttons and assign functions to them any way you want, add RGB colors and more.

Please note that you will not need any additional drivers or software to make the mouse work.

Conclude

In this Corsair Harpoon review, **TipsMake.com** gave you everything you need to know about this mouse. You have seen all the pros and cons of Corsair Harpoon gaming mice. Surely this is one of the good products, worth your money to buy.

Sold for under \$ 50, this mouse is a pleasant surprise for all users. If you buy it, you will get good value for the money. This mouse will work well for many years. However, if you have big hands, choose another product.

Advantages

1. Quite easy to program and user-friendly software
2. Surf very smoothly
3. The buttons are very nice and responsive

4. High polling rate
5. 6 programmable buttons, not too much and not too little
6. The mouse has a fairly solid and durable structure.
7. The price of the mouse is quite affordable considering all the features
8. Reliable performance, all features work as expected
9. Just plug and play, no need to download drivers and software
10. Internal memory allows you to store gaming profiles and then access them on any computer without having to reinstall software

Defect

1. The maximum DPI setting is only 6000
2. RGB LED light cannot be adjusted according to different brightness levels (can only be turned on or off)
3. Size should be bigger
