

Create 3D images from your photo library on your computer.

Today, 3D technology has become increasingly popular, from TVs to cameras and camcorders, all utilizing advanced 3D technology. However, you don't need these specialized devices to create stunning 3D images. 3D Image Commander will help you do just that.

Looking to create 3D images from your computer photos? It's simple! With 3D Image Commander software, you can easily create 3D images from your photo library. Follow the instructions below to learn how.

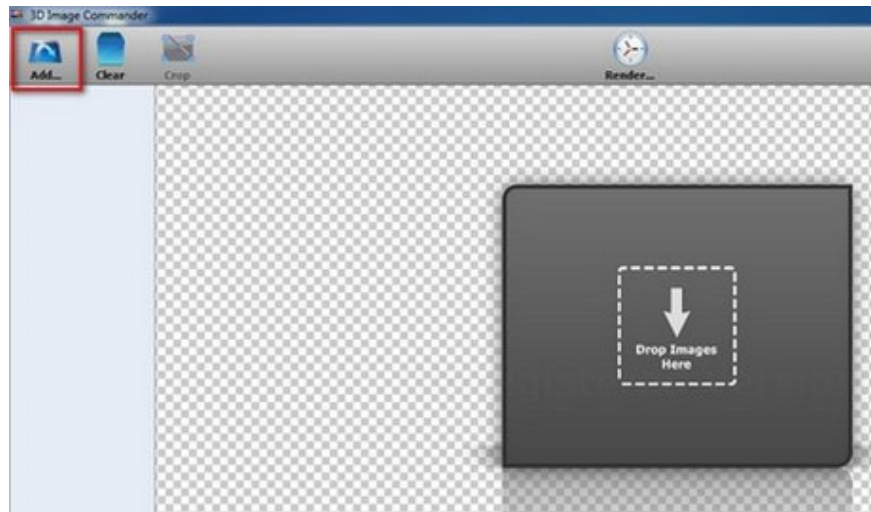

**Make
3D Photo**

Instructions on creating 3D images from your photo library.

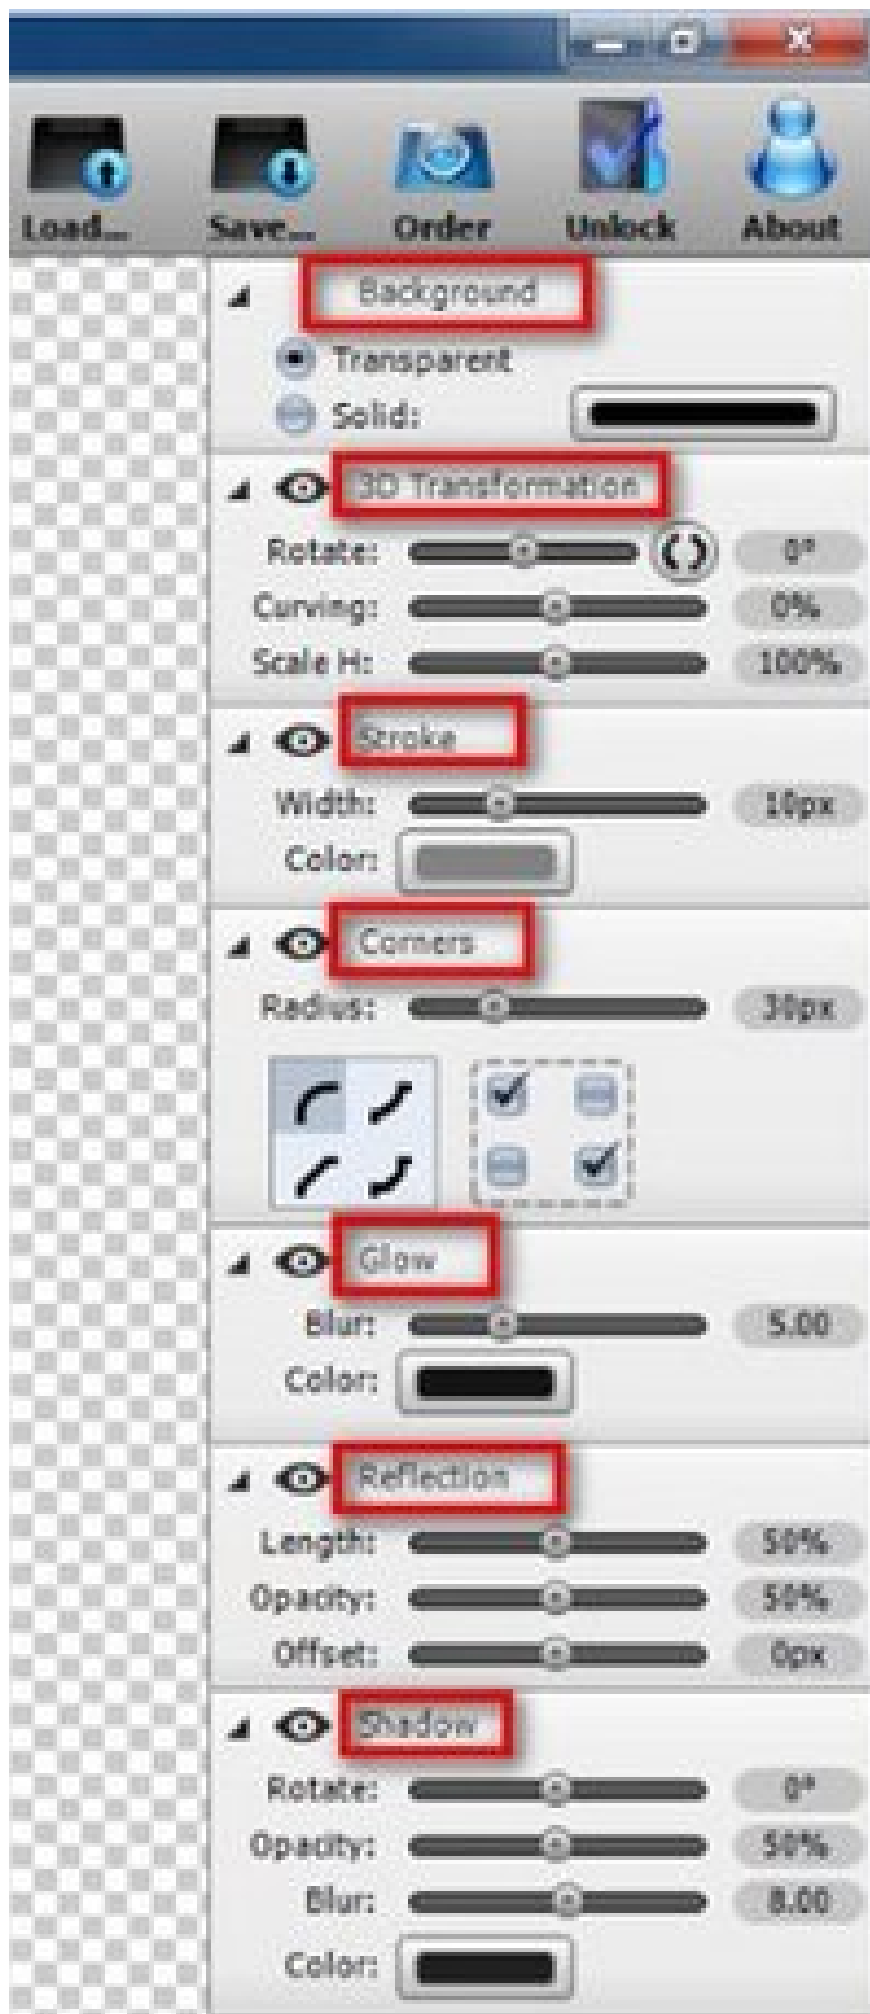

To experience the newly updated features, you can download and install the latest version of 3D Image Commander here: **[Download 3D Image Commander](#)**

After downloading and installing, launch the 3D Image Commander program; the main interface will look like this.

Step 1 : Click on **Add...** to select the image you want to create a 3D effect from, or you can drag and drop the image onto the program's main screen.

Step 2 : After selecting the image you want to 3D transform, the program interface offers various effects that you can choose to edit your image to your liking.

- **Background tab:** To change the background screen (see image above), here you can change the properties by simply moving the sliders.
- **3D Transformation tab:** Used to create 3D effects. Here you can create your favorite effects by using the mouse to change the slider values, and the results will be displayed on the screen immediately.
- **Stroke tab:** Used to create a border around your photo; the color can be changed as desired.
- **Corners tab:** You can create rounded corners by checking the boxes.
- **Reflection tab:** Used to create reflections, which can increase the brightness, height, and distance between the reflected image and your original image.
- **Shadow tab:** Used to create shadow effects around the image. The color of the shadows can be changed.

Step 3 : After selecting the effects you want, to add text to the image, click on '**Add Text**'.

Here you can enter text into the **Type Text** box , and you can change the font, font size, or color of the text you enter into the image.

Step 4 : After selecting your desired effects, click '**Save...**' to save the image.

So, with a few simple steps in the 3D Image Commander software, you've created a 3D image with a satisfactory effect. If you're still not satisfied, you can refer to and use the 3D Flash Animator software.
