

Create animated images using Screen GIF

Screen GIF is a small and lightweight software that allows users to create animations directly on their screen by recording desktop screen actions. Screen GIF is also very easy to use, and in today's article, TipsMake will guide you on how to create animations using Screen GIF.

Animated images are very popular these days; they express more emotions than static images, and a variety of software programs have emerged, such as GIFCam and Easy GIF Animator, to support users. GIFCam has an interface and usage method most similar to Screen GIF, so if you've ever used GIFCam, you'll likely have no problem using Screen GIF.

If you're already proficient with the aforementioned software, you might want to create the simplest animated GIF using Photoshop. Photoshop not only supports detailed image editing but also allows you to create simple animated GIFs, a skill you might want to try. Now, follow TipsMake to create an animated GIF using Screen GIF.

Instructions on creating animated GIFs using Screen GIF

Step 1: You can download the latest version of Screen GIF here: [Screen GIF](#).

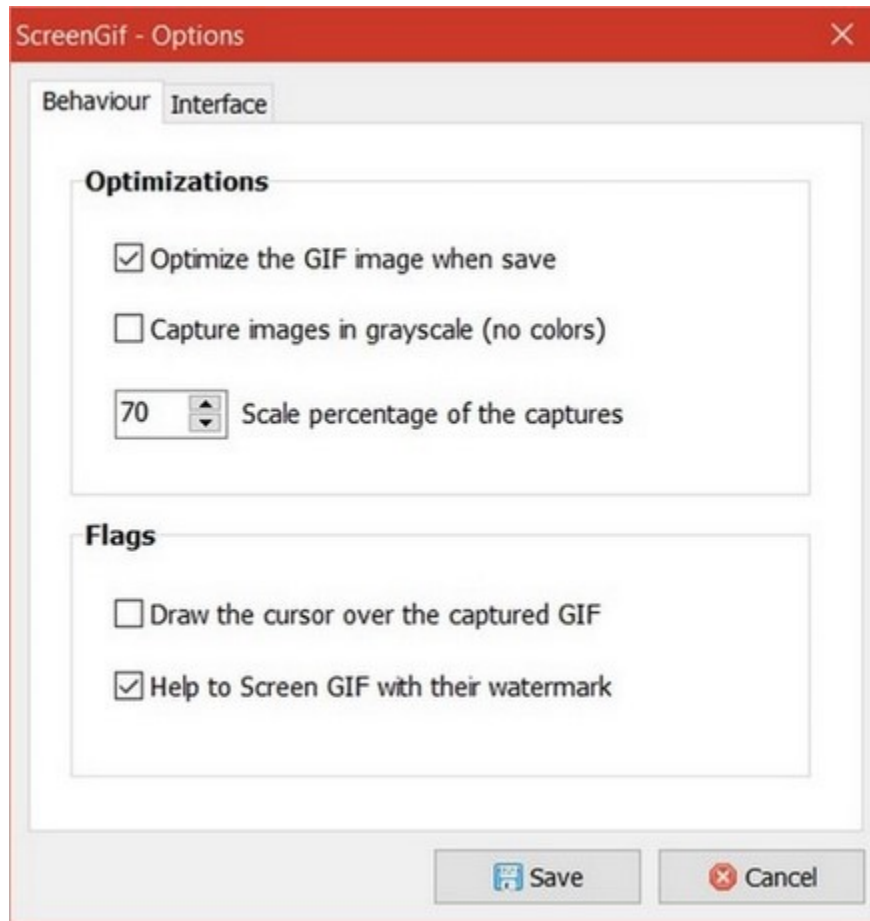

Step 2: After the installation is complete, open the software and you will see the basic interface of the program.

Step 3: You can customize the recording size by dragging the slider to enlarge or reduce it within the frame.

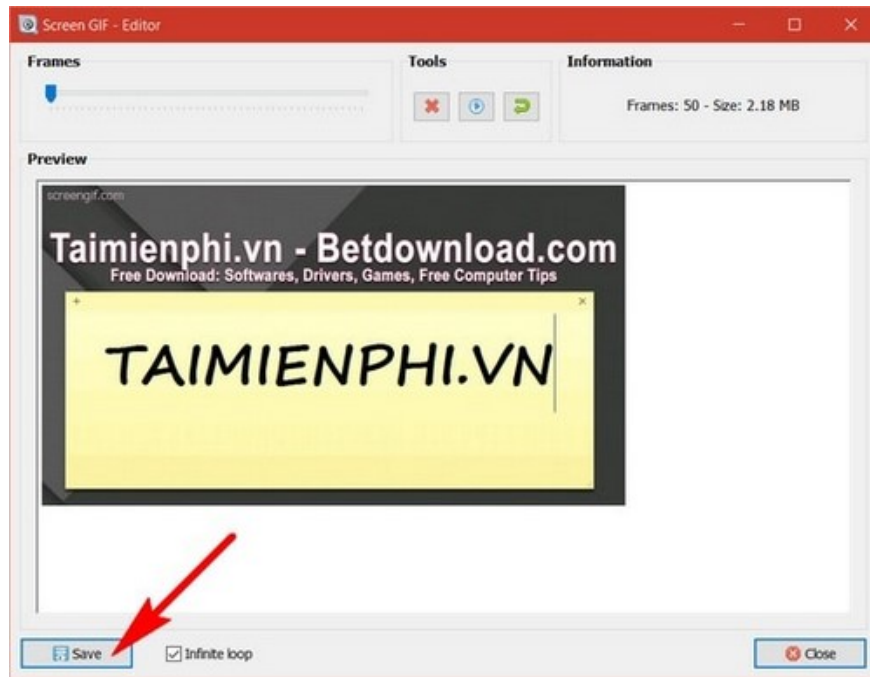

Step 4: In the Options section of Screen GIF, it's quite simple; you can choose black and white mode with "Capture images in grayscale" or adjust the image quality percentage.

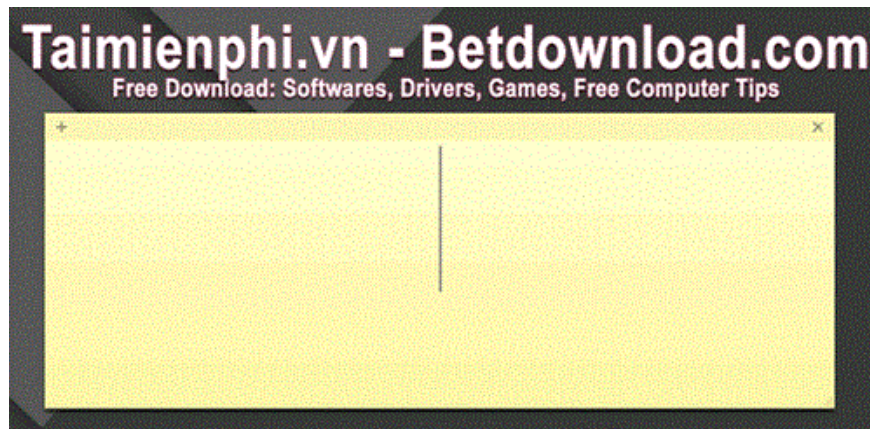

Step 5: To start or stop recording, you can click on the icon as shown in the image.

Step 6: After recording, the program will show you a preview. If you are satisfied, click Save to save it.

And this is the result after creating an animated image using Screen GIF.
