

Create a dialogue video from just two images using Google Flow.

Google Flow is currently a popular AI video creation tool, and you can create dialogue videos from photos using commands from ChatGPT.

Google Flow is currently a popular AI video creation tool , and you can create dialogue videos from images using commands from ChatGPT. We'll ask ChatGPT to write a dialogue between two characters on a given topic, then use that prompt in Veo 3. Below is a guide on how to create dialogue videos from images.

Instructions on creating dialogue videos from images.

Step 1:

Prepare two images of any character, or you can create characters on ChatGPT. Then **upload the two images to ChatGPT** .

Step 2:

Enter the following command into ChatGPT to create a video editing command for yourself on ChatGPT.

Write a Flow prompt to create a video with two characters having a dialogue in the girl's office.

The boy says: "How far have you gotten with the work the boss assigned you?"

The girl replies: "I'm still working on it, but there are many issues."

The dialogue should be natural, without text, and subtitles should run throughout the video.

The general prompt would be:

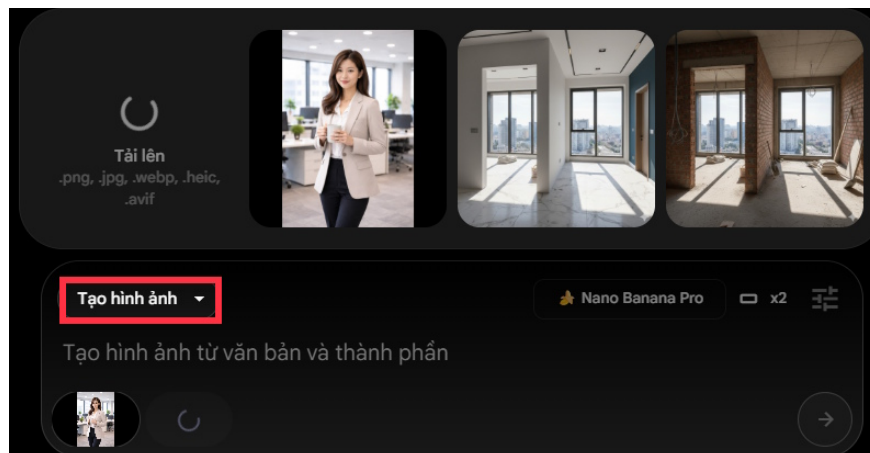

Write a Flow video prompt for a dialogue between two characters, including the setting [location], dialogue content [write each sentence in detail for each character], dialogue style between the characters, emotions in the video, and no subtitles .

Step 3:

After obtaining the video creation prompt, we will copy the entire command and then access Google Flow to begin creating the video. In video creation mode, select **Create Image**.

Next, upload the two images to Flow. Then, **paste the prompt from ChatGPT into Flow** and send it to create the video dialogue.

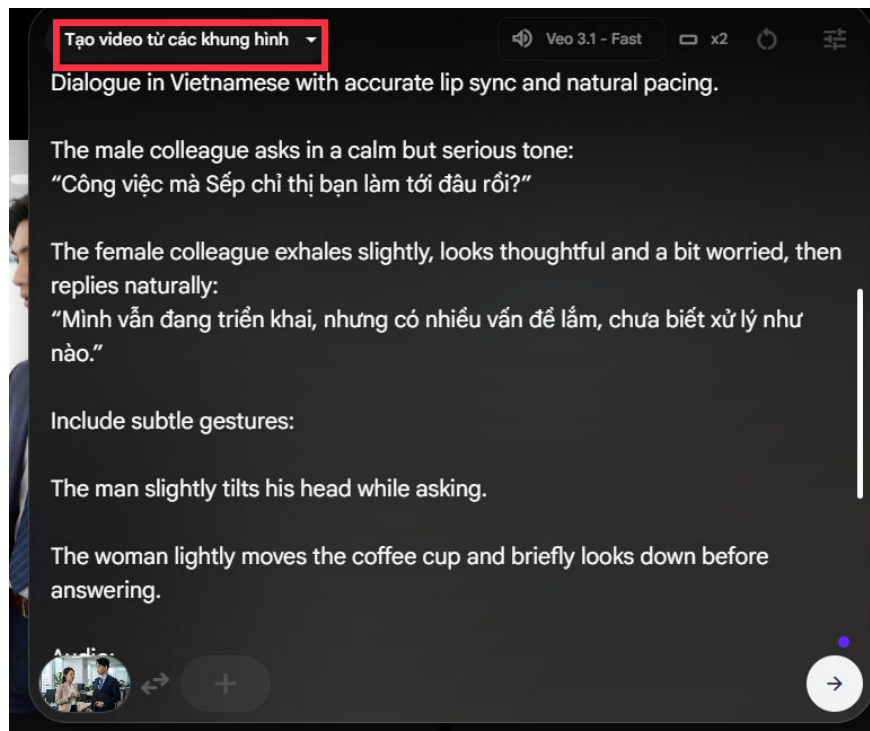

Step 4:

Flow will **create a complete scene** for you from the two uploaded characters, **using the background in the prompt** we're using. Select the images you want to use to convert into a video, **then click Add to command**.

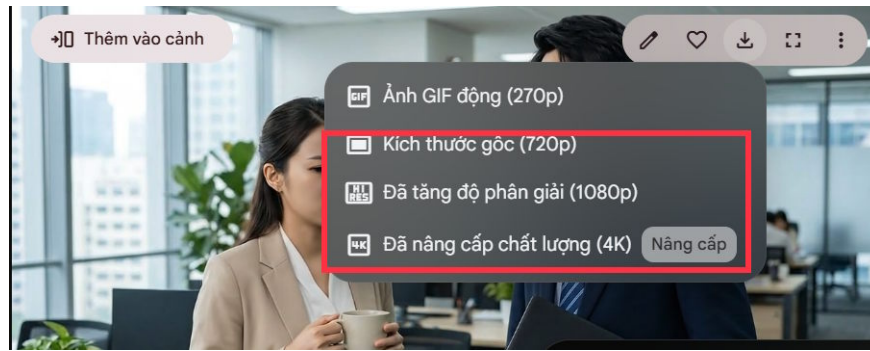

Step 5:

The image will then appear in the video creation frame, and the mode will be "Create video from frames ". Continue by **pasting the prompt from ChatGPT into Flow to create the video** .

You will then receive the video from the ChatGPT command. Click the save icon and select the video quality you want to download.

Starting with a simple scenario, ChatGPT will write commands to create a video based on the content and context you want. Flow will then create a more complete frame, and from there, generate the dialogue video of the characters.

Video creates dialogue scenes from images using Google Flow.
