

Create hyperlinks in PowerPoint - Create Hyperlinks in PowerPoint

Create links in PowerPoint you can link slide in a file, link to email address, website address .. and link right in a slide of PowerPoint.

Create links in PowerPoint you can link slide in a file, link to email address, website address . and link right in a slide of PowerPoint. Creating links in PowerPoint makes your presentation more flexible and efficient, so how can you create links in PowerPoint?

The following article shows how to create links in PowerPoint 2007, 2010, 2013.

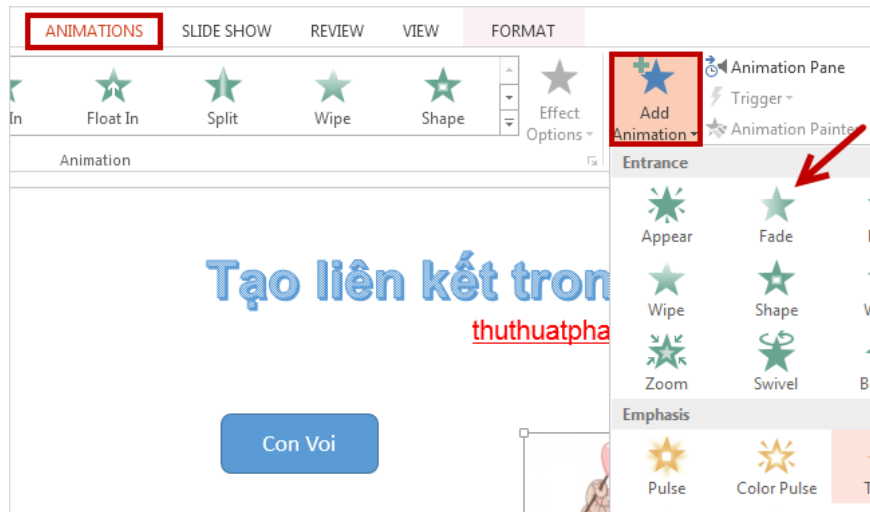

Create links right in a slide of PowerPoint 2010, 2013

For example, in the slide you have 1 brick and 1 image, when you want to click on the puzzle, that image will appear.

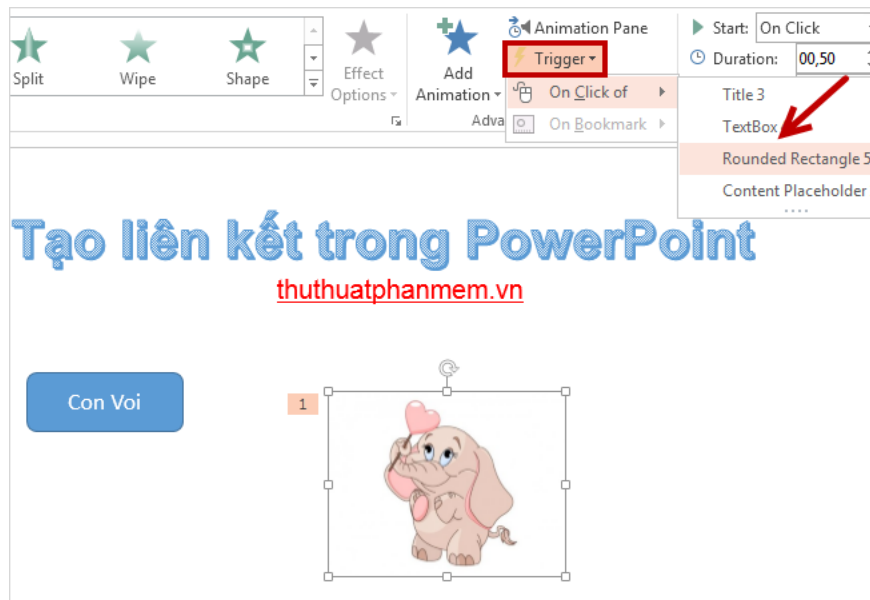

To create such links you do the following:

Step 1: Select the image to create links, select the **Animations** tab -> **Add Animation** -> choose effects for the image.

Step 2: After creating the effect for the image, in the **Advanced Animation** section you choose **Trigger** -> **On Click of** -> **choose the name of the bricks** .

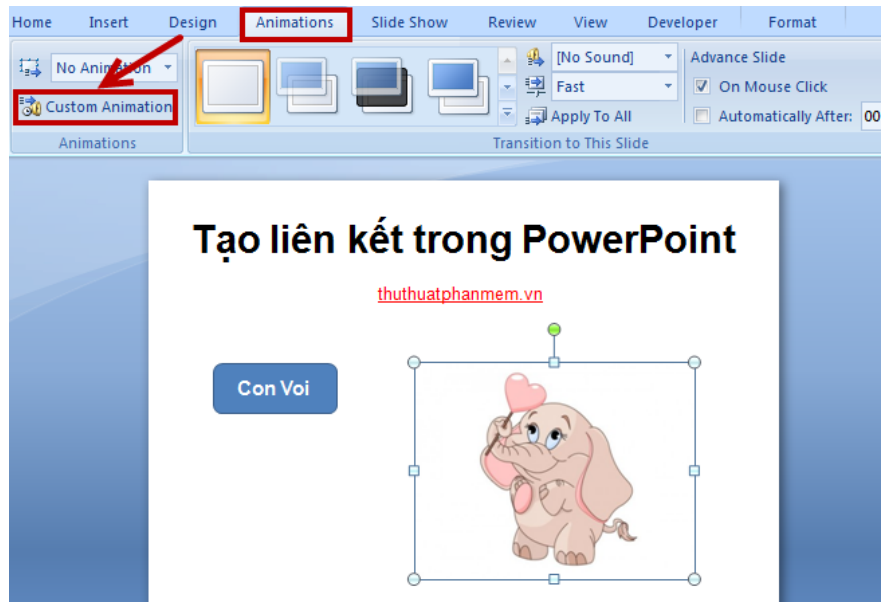

So you've created the link, you run the slide show and click on the puzzle, the image will appear immediately. Slide with many bricks and many images you do the same.

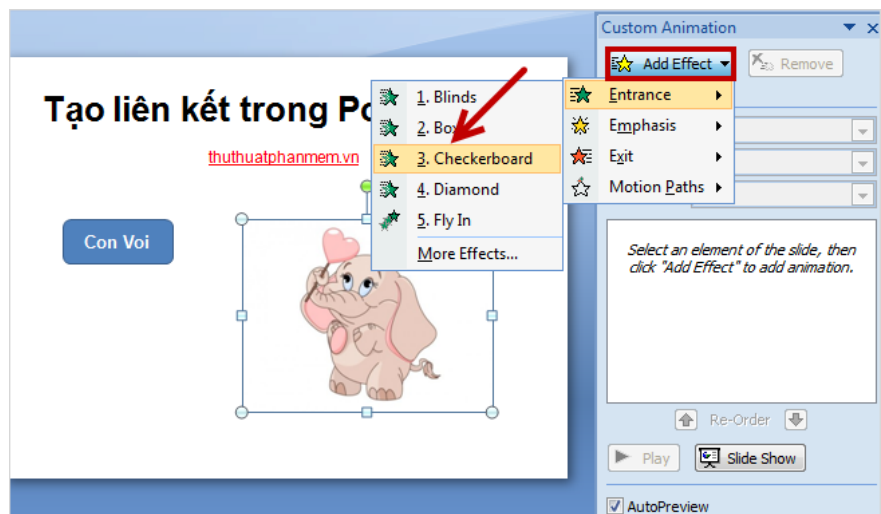

Create links right in a PowerPoint 2007 slide

In the same example above with 1 brick and 1 image, create a link so that when clicking on the puzzle, the image appears. If you use PowerPoint 2007, creating links right in a slide is a little different. For details on how to create links in PowerPoint 2007, please refer to the steps below:

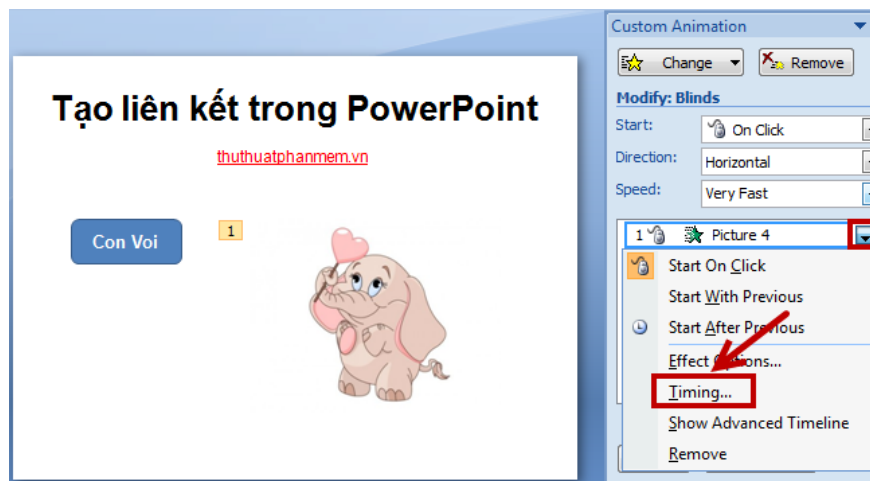

Step 1: Select the image to link, select the **Animation** tab -> **Custom Animation** to open the **Custom Animation** dialog box .

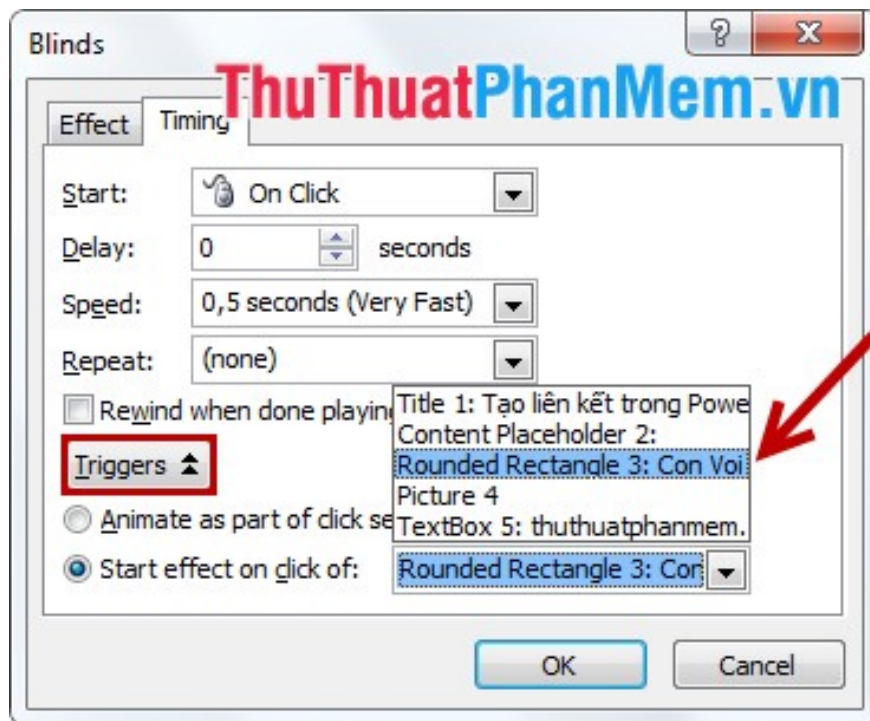

Step 2: Appearance **Custom Animation** on the right side, select **Add Effect** and select the effect that appears the image you want.

Step 3: Appear the name of the effect in the **Custom Animation** dialog box, select the triangle and select **Timing** .

Step 4: Timing card appears in the **Blinds** dialog box , select **Triggers** -> **Start effect on click of** -> select the name of the bricks you want to create the link.

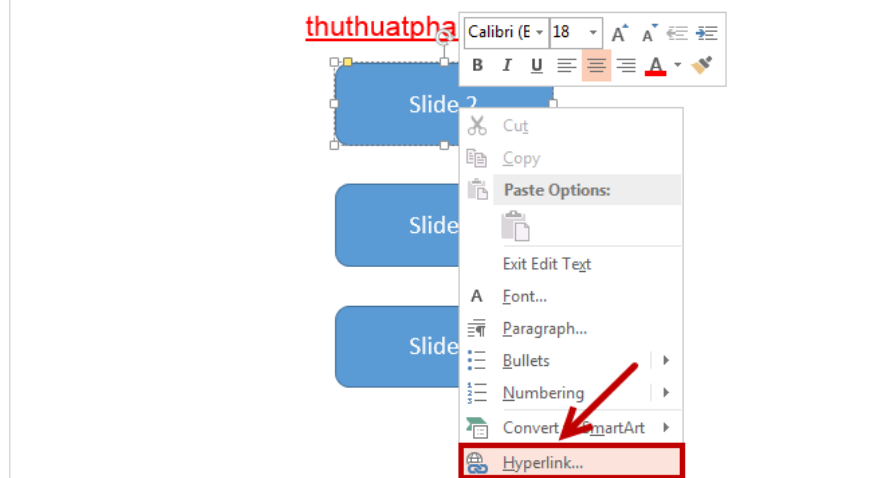

Click **OK** to finish, you PowerPoint and see the results.

Create links to slides, web pages, emails . in PowerPoint 2007, 2010, 2013

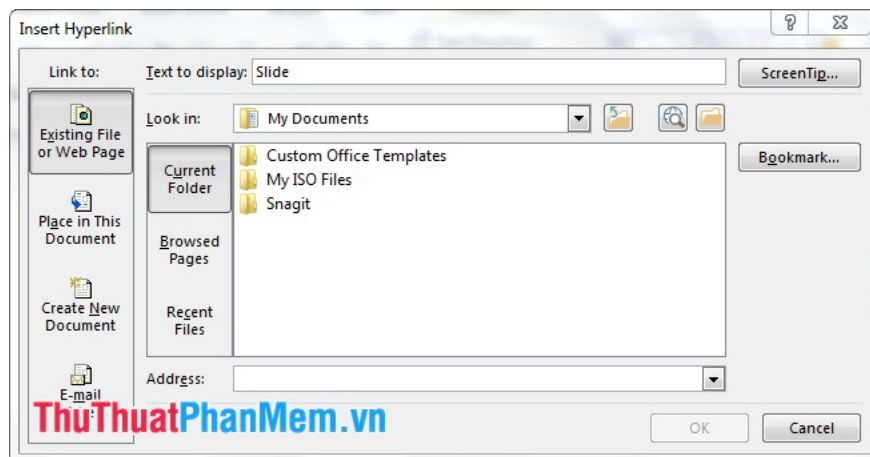

Step 1: You need to select (highlight the text) or select the shapes to create links, then you select **Insert** -> **Hyperlink** (**Ctrl + K**) or right-click and choose **Hyperlink** .

Tạo liên kết trong PowerPoint

Step 2: The **Insert Hyperlink** dialog box appears , you have 4 link options:

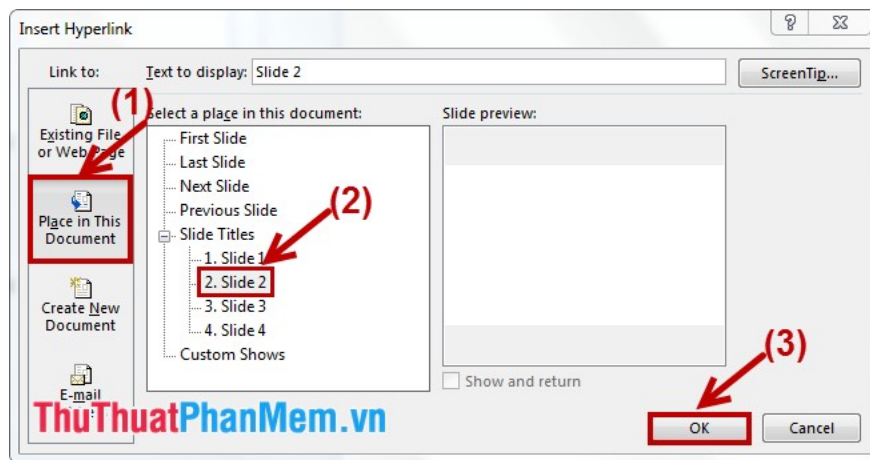

- **Existing File or Web Page:** link to files or web pages.
- **Place in This Document:** links to any slide in a PowerPoint file.
- **Create New Document:** link to a newly created folder.
- **E-mail Address:** link to the email address.

If you want to create any link, you just need to select on that section. For example:

- **Create links to slides in PowerPoint .**

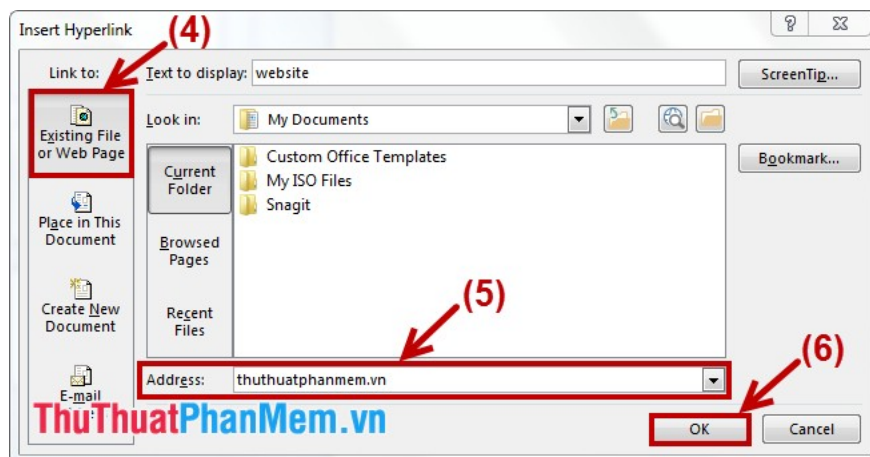

In the dialog box **Insert Hyperlink** you choose **Place in This Document** , in the **Select a place in this document** you choose to slide to link and click **OK** .

So the link will be created, when you click on the link, the slide you selected will be displayed.

- Create links to other websites

You choose **Existing File or Web page** in the **Insert Hyperlink** dialog box and enter the website **address** in the **Address** box and click **OK** to create the link.

Hopefully, with the way to create links in PowerPoint, the tutorial will help you in the process of editing a presentation more effectively. Good luck!
