To solve this, the simplest is to use a software that allows to create many different Windows desktops, which Multi Desktop for Windows is a typical. This is a powerful desktop management software, which can save you a lot of time and effort in cleaning up Windows.**

Multi Desktop 1.5 is software that runs on Windows operating systems. In particular, it can create an unlimited number of different desktops, and is completely independent of use. Furthermore, even if your computer is used by many people with your own needs, or simply you are the only one who uses a computer but needs multiple desktops to run different applications at the same time, Multi Desktop can support well. It has the ability to switch back and forth almost instantly between desktops.

Furthermore, every desktop you use can be configured with different resolutions, containing wallpapers, icons, folders, scanning frequencies . independently like you have multiple machines. different properties. This is even more evident when each desktop can be used for certain users, with password protection.

## Some outstanding features of Multi Desktop:

- Unlimited number of desktops.
- Each desktop has resolution and the interface is completely independent.
- Desktops can be password protected, convenient for many users.
- There are 3 password modes: Quick Lock (temporary protection), Permanent Protection (long-term protection) and Auto Lock Permanent Protection (automatic protection).

When installed, Multi Desktop will pre-configure to help you 5 desktops, with each desktop used for each individual requirement such as business applications, email usage, web surfing . Also you can set 2 keys hot on a desktop for easy switching to every desktop.

Use for Windows XP / 2000 / NT / ME / 98/95 operating systems.
