

# Create passwords for File and Folder protection on Android

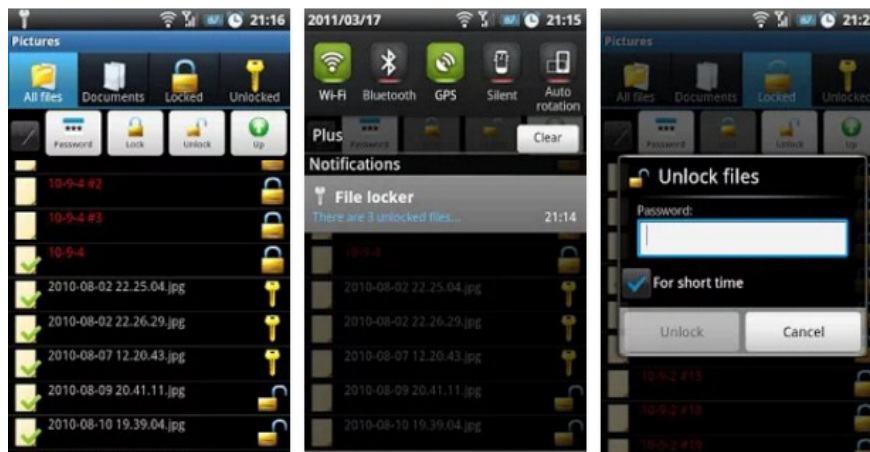

Because the data on Android is stored publicly without being encrypted or protected by setting a password, anyone can access your file. Today, TipsMake.com will guide you to read useful ways to help you set a password to protect any file and folder on Android devices.

Since the data on Android is stored publicly without being encrypted or unprotected by installing a password, anyone can access your file. Today, TipsMake.com will guide you to read useful ways to help you set a password to protect any file and folder on Android devices. In this article, we will discuss two methods of password setting to protect files and folders on Android smartphones.

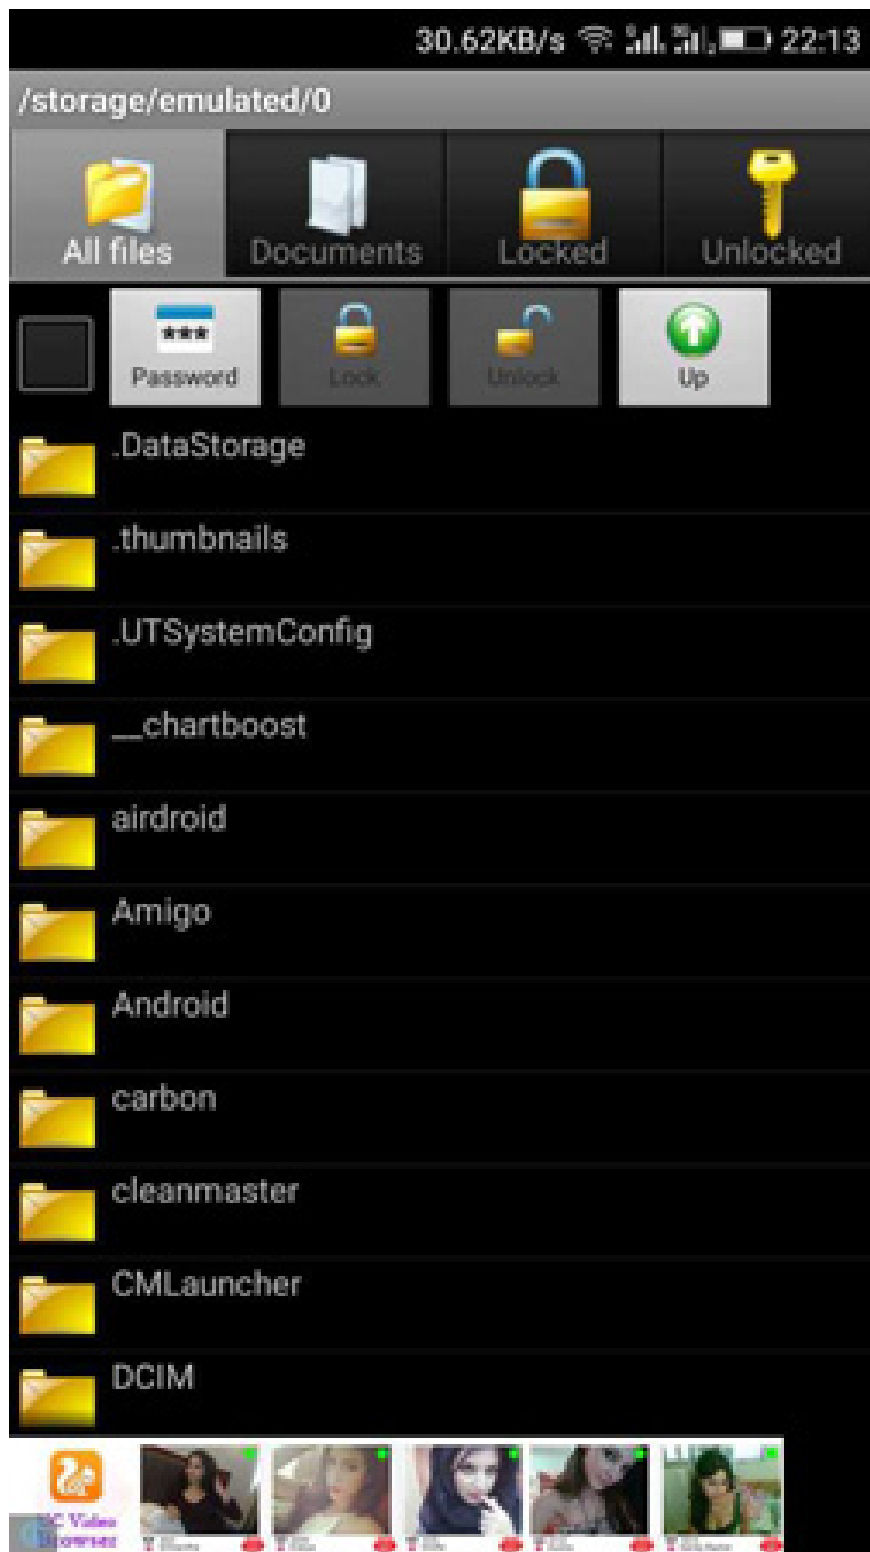

1. Instructions for setting password to protect files and folders in Windows

## Use File Locker

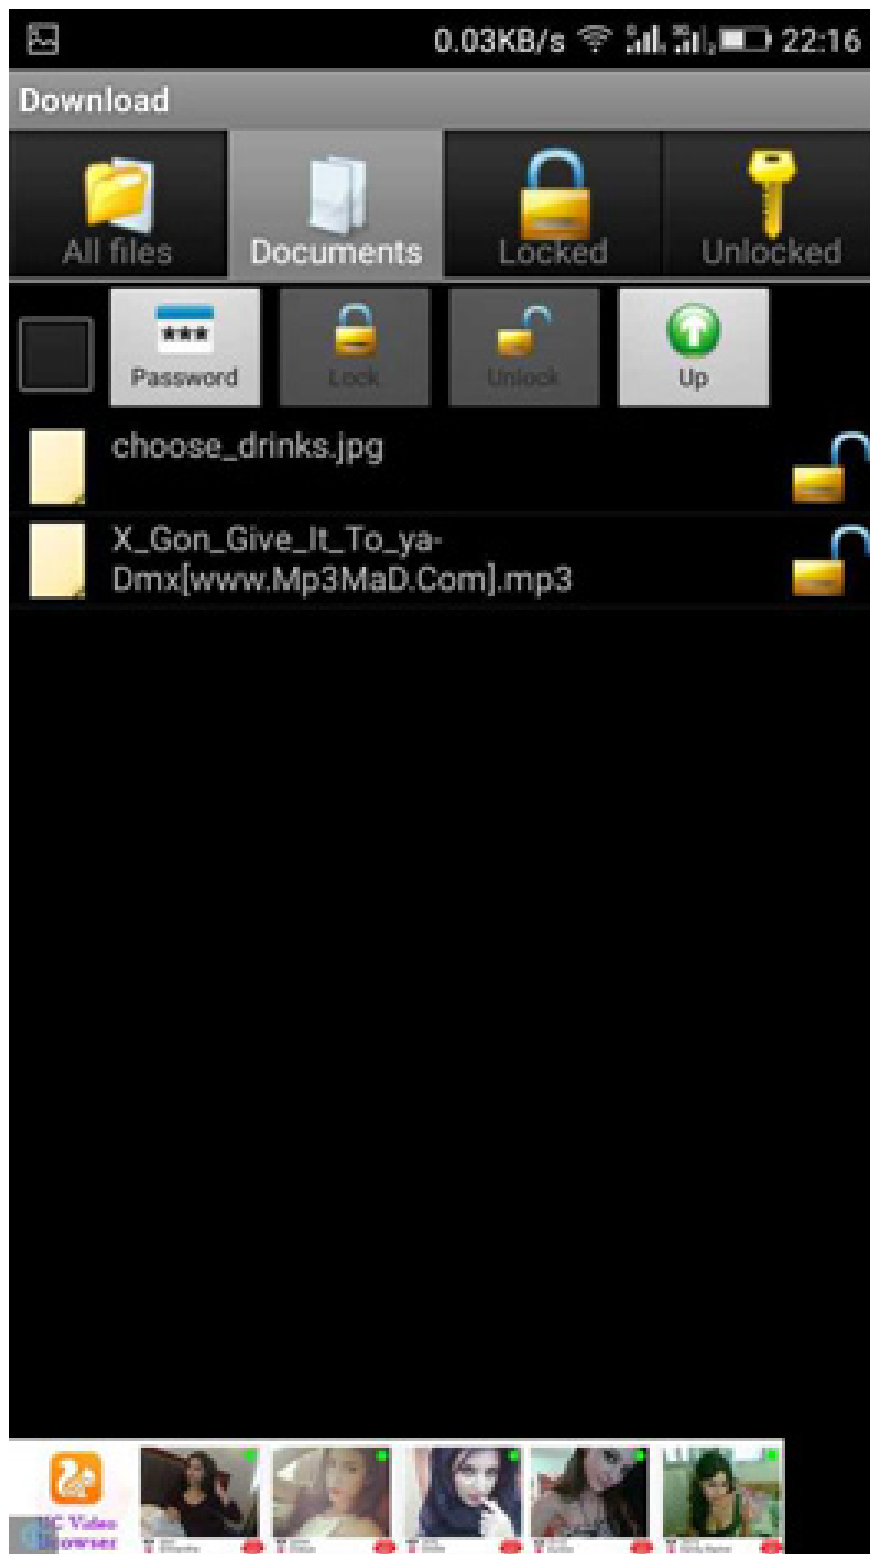

**Step 1:** First, download and install the **File Locker** application.

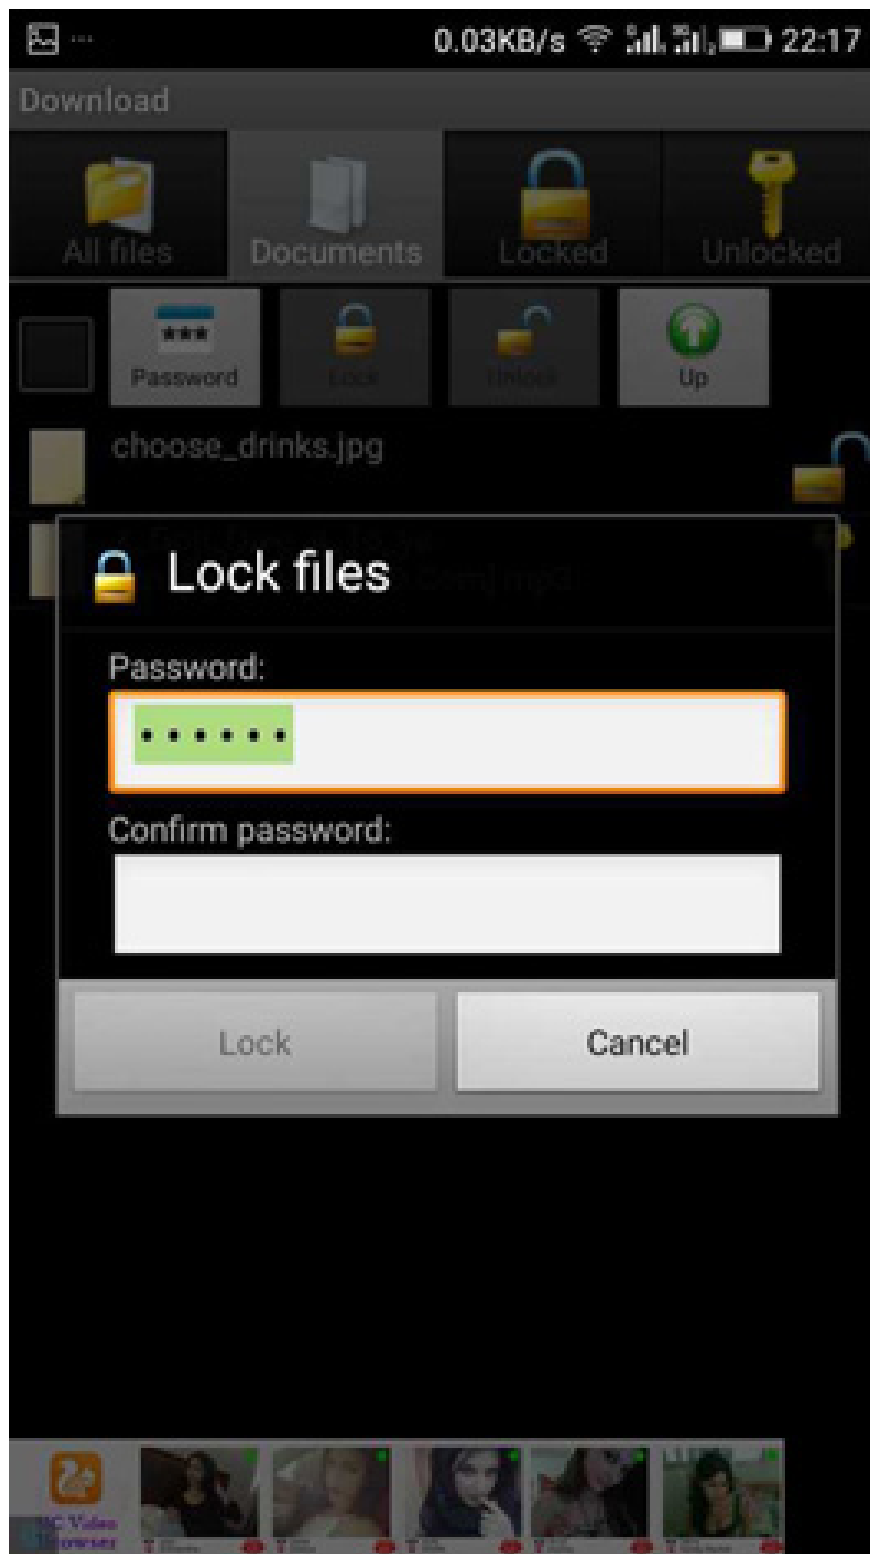

**Step 2:** After installing, launch the application, you will see all the files and folders of Android memory there.

**Step 3:** Browse the files you want to lock with this tool.

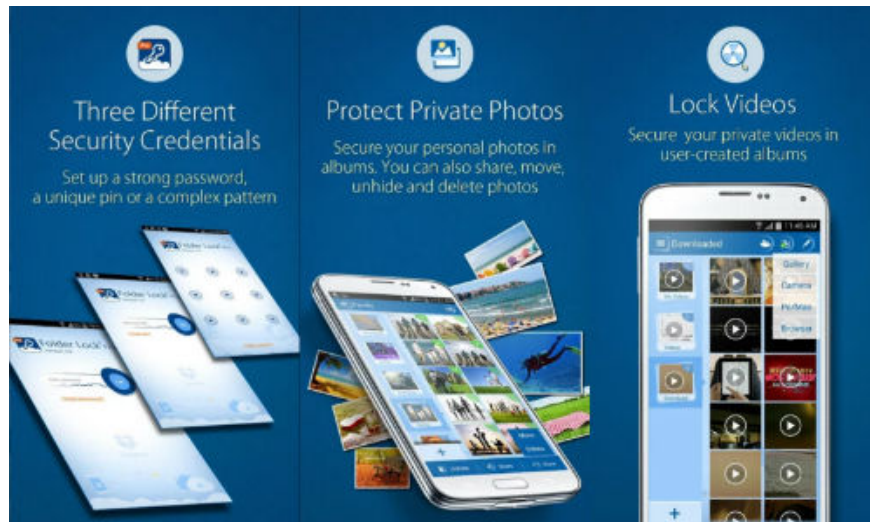

**Step 4:** Click on the file and select the **Lock** option. You need to enter the password for the file, confirm the password and click **Lock** .

That's it, now that your file is protected and you want to access the file, you will have to enter the correct password.

## Use Folder Lock

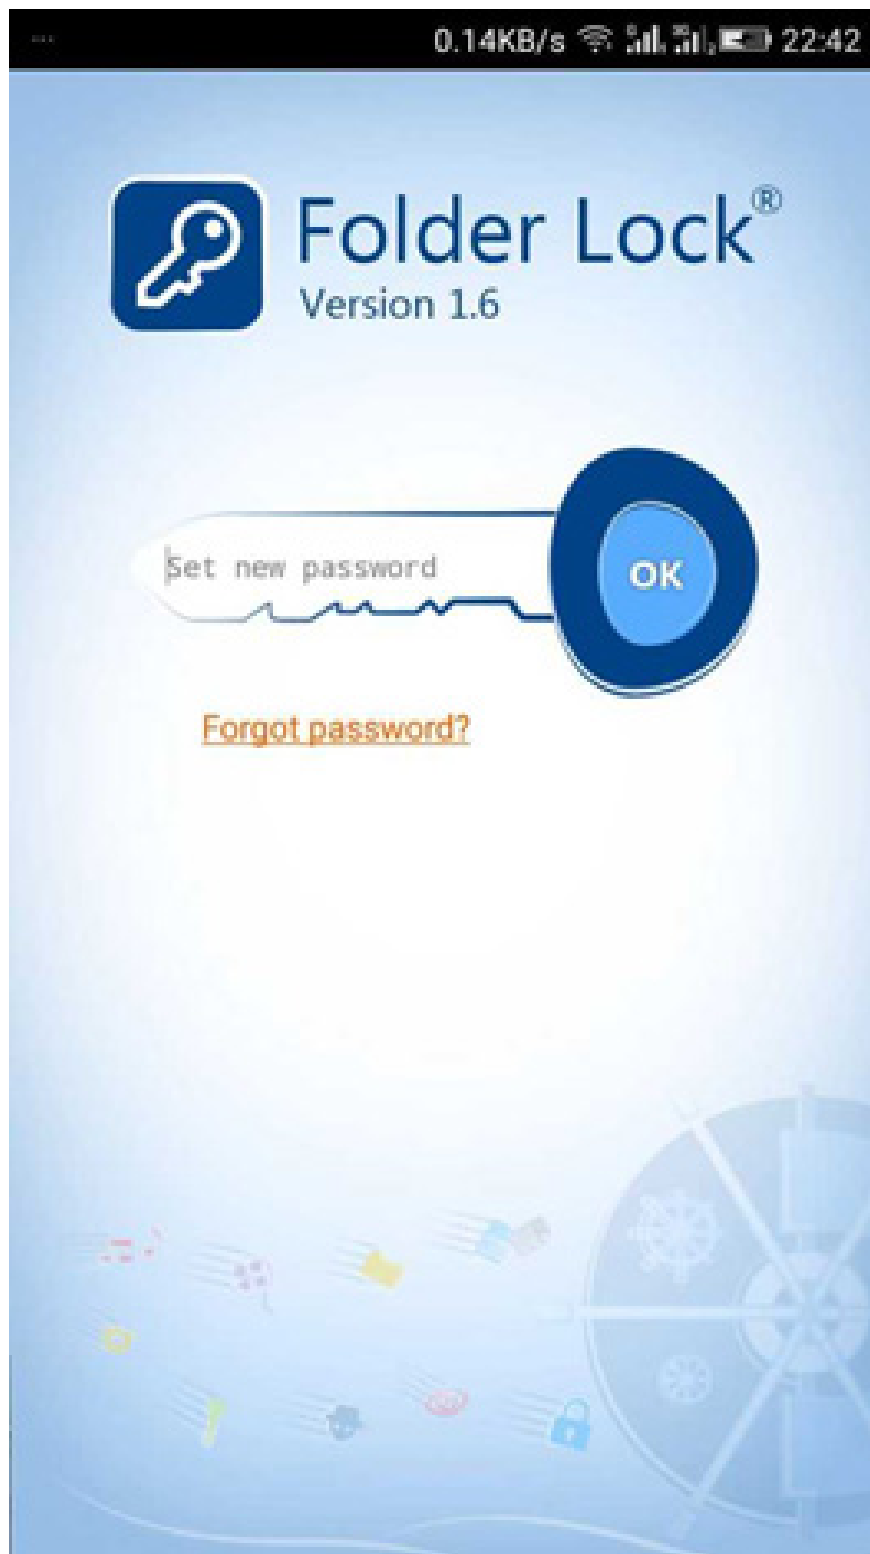

**Folder Lock** allows you to password-protect files, videos, documents, contacts, notes and audio files on Android phones. The application has a clear and easy to use interface. You can also stream files from gallery, PC or Mac, camera and Internet browser.

### **Features of Folder Lock:**

1. Protect private images.
2. Hide sensitive videos and images.
3. Set password to protect audio files.
4. Lock important documents.
5. Write security notes.
6. Voice recording and secret memo.

### **How to use Folder Lock**

**Step 1:** Download and install Folder Lock application to your phone and launch the application. First you need to set a password for it.

**Step 2:** Now you will see a lot of options, choose the option you want. If you want to hide the image, select the image and add it to Folder Lock then click **Hide** . The same applies to other files and folders.

**Step 3:** If you want to hide the image or file, simply select the file and select **Unhide** at the bottom left of the screen.

So done. This application is quite easy to use so you can easily hide files and folders without any difficulties.

These are the two easiest methods to protect your files and folders on your Android device. If another person uses your phone, they cannot open locked files or folders without a password. Try to experience these 2 applications to see its effect!
