

Create super fast iPhone ringtones with iTunes on macOS

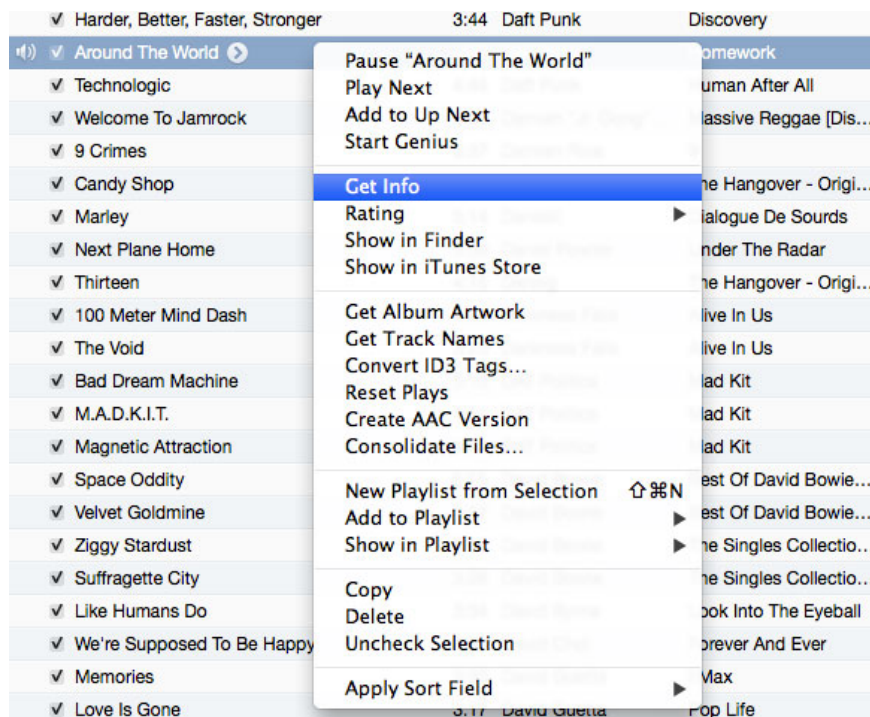

You can completely create your own ringtones from the latest, hottest songs in the world with just a simple tool, iTunes. If you are too bored with using the iPhone's default ringtones, you can completely refresh the ringtone by this simple way.

You can completely create your own ringtones from the latest, hottest songs in the world with just a simple tool, iTunes.

If you are too bored with using the iPhone's default ringtones, you can completely refresh your **ringtone** by the following simple way:

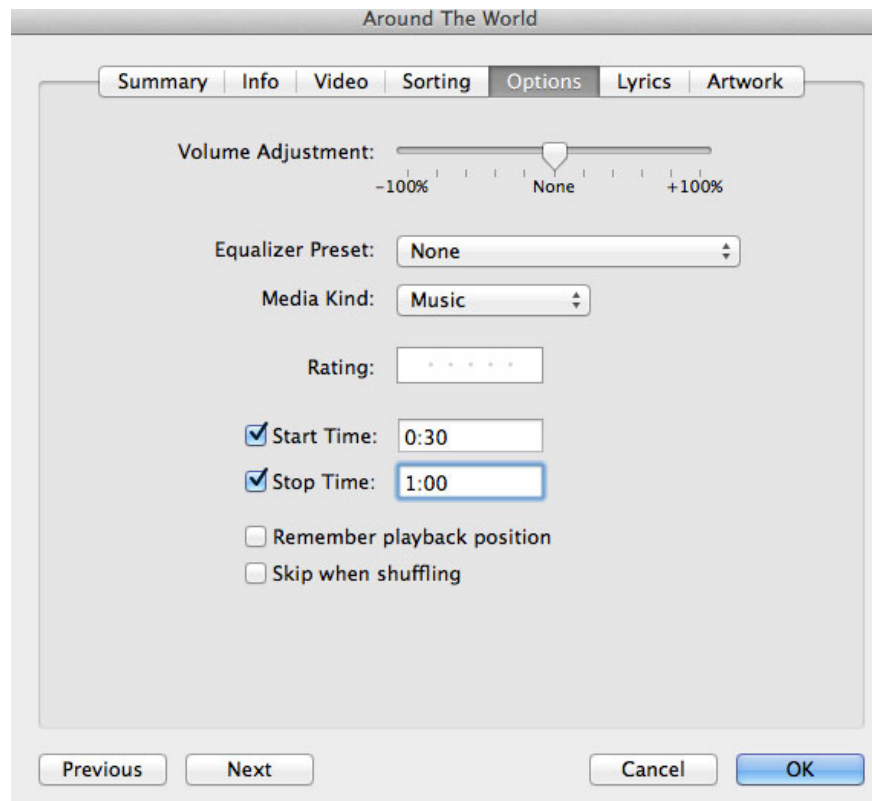

1. Select the song you want to use as a ringtone.

Open iTunes, find the song you want to use as a ringtone. **Right-click** and select **Get Info**.

2. Adjust the ringtone length

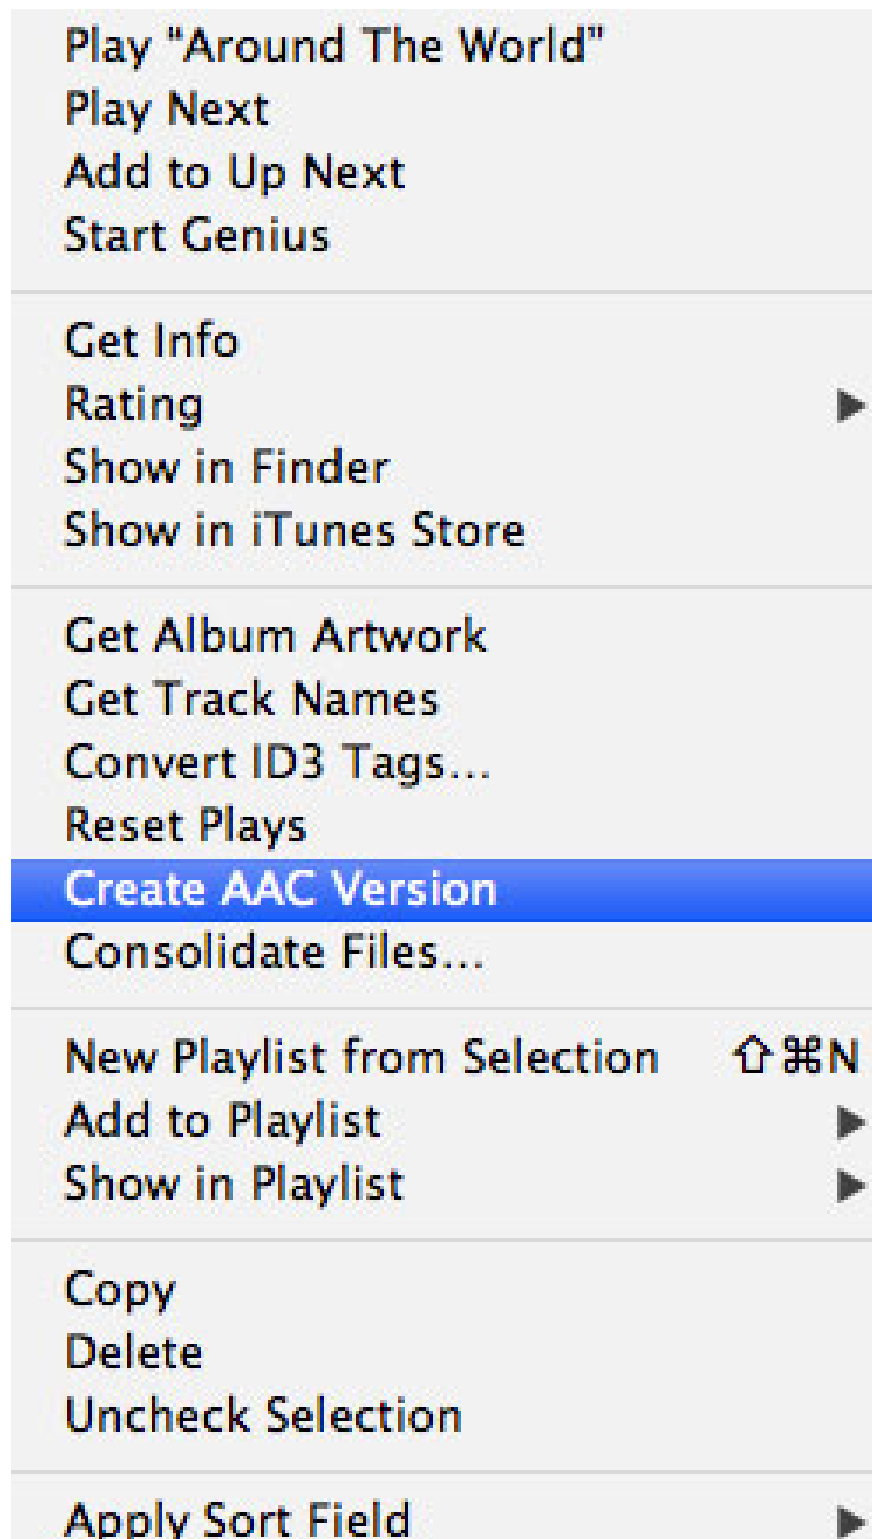

After entering the **Get Info** section , you are on the **Summary** tab by default, switch to the **Options** tab and set the start time and end time of the track. This is exactly the piece of music you want to cut from the track.

Note: iPhone ringtones cannot be longer than 40 seconds, so consider to choose for yourself the most impressive piece in the song.

3. Create an AAC version

Once you're done, go back to **iTunes**, right-click and select **Create ACC Version**.

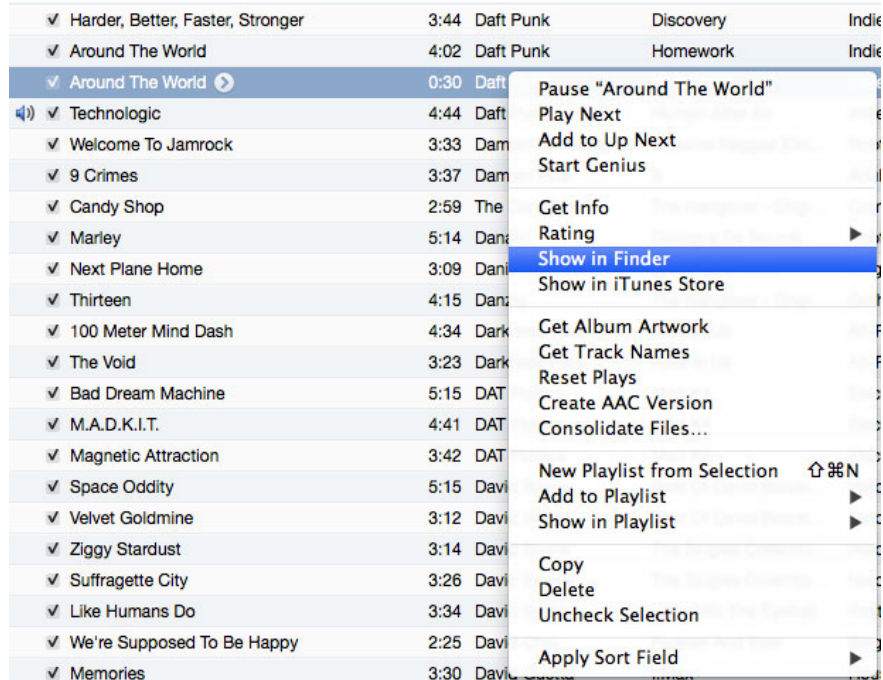

After this process is complete, you will see an additional song in the library below the original post. This is the piece of music you chose to cut out above.

Tip: After successfully performing this step, you can re-enter the original track, reset playback time and stop time so that the song can be played completely once you want to listen again.

4. Convert the cut music into ringtone

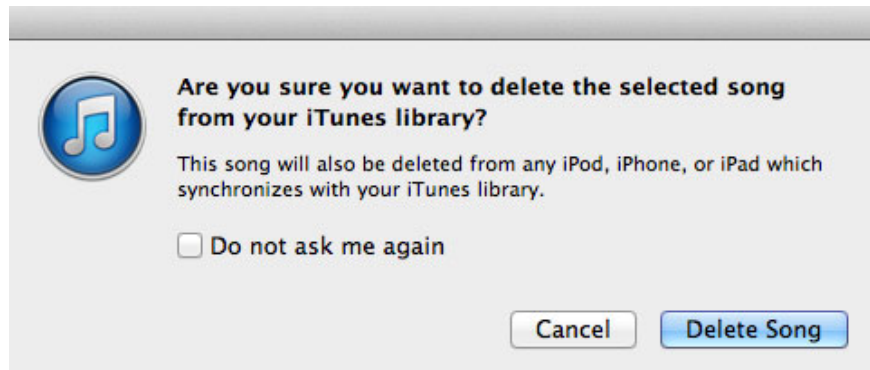

Right-click on the cut music, select **Show in Finder** to open the folder containing the file. Select the file with the width section **m4a**.

Proceed to change the **m4a** extension to **m4r**. A notification window will be displayed, continue to select **Use m4r**.

5. Delete the ACC version

Return to iTunes again, right-click the ACC version created in step 3 and click delete from the library (You should choose **Keep files**).

6. Add ringtones

Connect your device to iTunes, select the **Sync Ringtones** section to add a ringtone to your phone. Then, work on the iPhone to select the ringtone you just created.
