

Create Twitch TV streaming video game account with BlueStacks

Users can now play games, watch videos, chat or stream live videos to multiple people using the new combination of Twitch TV and BlueStacks.

There are quite a lot of software that emulates the current Android operating system such as Genymotion, KEmulator, or Droid4X, . In particular, the BlueStacks emulator tool is used more by most people, providing us with the ability to store rich use of Android on computers with many other attractive features when upgrading to BlueStacks version 2.

In particular, when BlueStacks producer combined with popular Twitch game stream channel, users can broadcast live screen on BlueStacks to many other players. When logging into Twitch account, gamers can fully chat, play games and broadcast live games to many people. In order to stream mobile games on BlueStacks with Twitch, you first need to register for a Twitch account by following the Network Administration step below.

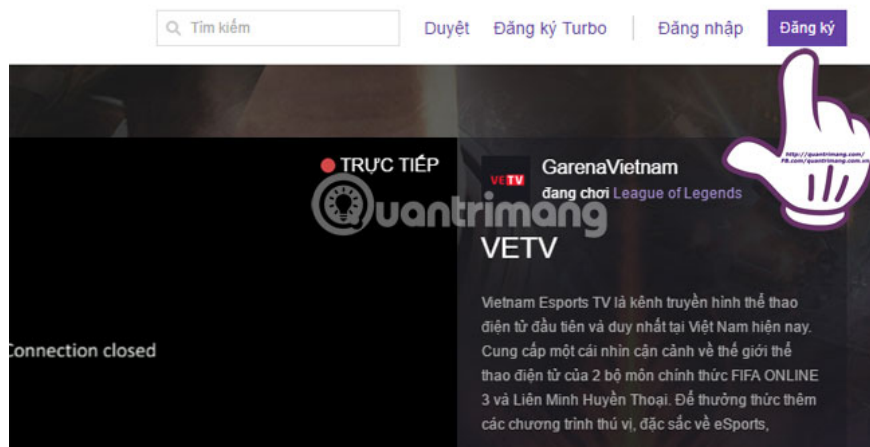

1. **How to copy data from computer to BlueStacks?**
2. **Speed ??up tips for BlueStacks emulator software**
