

Create your Windows XP SP2 installation disc yourself

You have a CD drive and a WinXP version (original but old). So why don't you think about creating a Windows XP installation disc with the latest updates and patches => it will become your 'standalone'. How to create? Please read the guide below.

You have a CD drive and a WinXP version (original but old). So why don't you think about creating a Windows XP installation disc with the latest updates and patches => it will become your "standalone". How to create? Please read the guide below. (here I will also show you how to install Windows XP the fastest!)

Step 1 : First you have to prepare a few things:

- Windows XP SP2 upgrade.download
- **IsoBuster** software (used to create XP bootable disk).download

Step 2 : Upgrade your Windows version so SP2!

- Copy your copy of Windows XP to your hard drive (for example: folder **C: XP_SP2**).
- Open the Command line **Start> Run> cmd**
- Go to the folder containing the upgrade (my name is **D: update**).
- Under the directory of my command line: **WindowsXP-KB835935-SP2-ENU / integrate: C: XP_SP2.**

Picture 1 of Create your Windows XP SP2 installation disc yourself

- Enter and the window to update your WinXP files will appear:

Picture 2 of Create your Windows XP SP2 installation disc yourself

- After that, it informs the update process successfully:

Picture 3 of Create your Windows XP SP2 installation disc yourself

- So your version of XP has been upgraded to SP2 already!

Tip : To keep it simple, **run** and use the command **D: updateWindowsXP-KB835935-SP2-ENU.exe -s: C: XP_SP2** (This method is also used for you to install patches that Microsoft supplies to your installation disk.).

Step 3: Modify the **winnt.sif** file in **i386** for a smoother installation:

- Open it with notepad (if you don't have this file, write one and save it as **winnt.sif**), my file is as follows:

```
[Data]
AutoPartition = 0
MsDosInitiated = "0"
UnattendedInstall = "Yes"
```

[Unattended]

UnattendMode = FullUnattended
OemSkipEula = Yes
OemPreinstall = No
TargetPath = WINDOWS

[GuiUnattended]

AdminPassword = *
EncryptedAdminPassword = NO
OEMSkipRegional = 1
TimeZone = 145
OemSkipWelcome = 1

[UserData]

ProductID = "BH6K8-MF4YH-PD6B3-FDJ4G-RGV8B"
FullName = "Doan Duy Thanh"
OrgName = "TH & TH"
ComputerName = DUYTHANH

[Display]

BitsPerPel = 32
Xresolution = 1024
YResolution = 768
Vrefresh = 75

[RegionalSettings]

LanguageGroup = 5.14

[TapiLocation]

CountryCode = 07
AreaCode = 07
LongDistanceAccess = `` 89054586522``

[Identification]

JoinWorkgroup = WORKGROUP

[Networking]

InstallDefaultComponents = Yes

[Branding]

BrandIEUsingUnattended = Yes

Step 4 : Now the main work is done now to burn it:

- If you give your XP disk (root), open **IsoBuster** to select " **Bootable CD** " folder, right-click **Microsoft Corporation.img** select **Extract Microsoft Corporation.img** and then save it to any folder (for example: **D: bootXP**).

Picture 4 of Create your Windows XP SP2 installation disc yourself

- Now open Nero and select the **CD-ROM (Boot)** burning type in **Nero Burning ROM** and then set the parameters as shown below:

Picture 5 of Create your Windows XP SP2 installation disc yourself

(If you do not change the *Number of loaded sectors* to 4 then your disk cannot be booted.)

Picture 6 of Create your Windows XP SP2 installation disc yourself

- The disk label you should set is **WXPCCP_EN** for Windows XP SP2.

Picture 7 of Create your Windows XP SP2 installation disc yourself

- Click **New** and put all the files in the Windows XP edition folder (my files and folders in **C: XP_SP2**) to the drive and write it down. It's done.

Good luck !
