

Custom guide to increase download speed on IDM

Customizable instructions to increase download speeds on IDM - The default settings of IDM are not optimal to achieve the fastest download speed. You can set IDM to IDM to achieve maximum download speed.

Internet Download Manager (IDM) is a tool to help you download all files with a fast speed. IDM is used by many people, but most of you usually use its default settings.

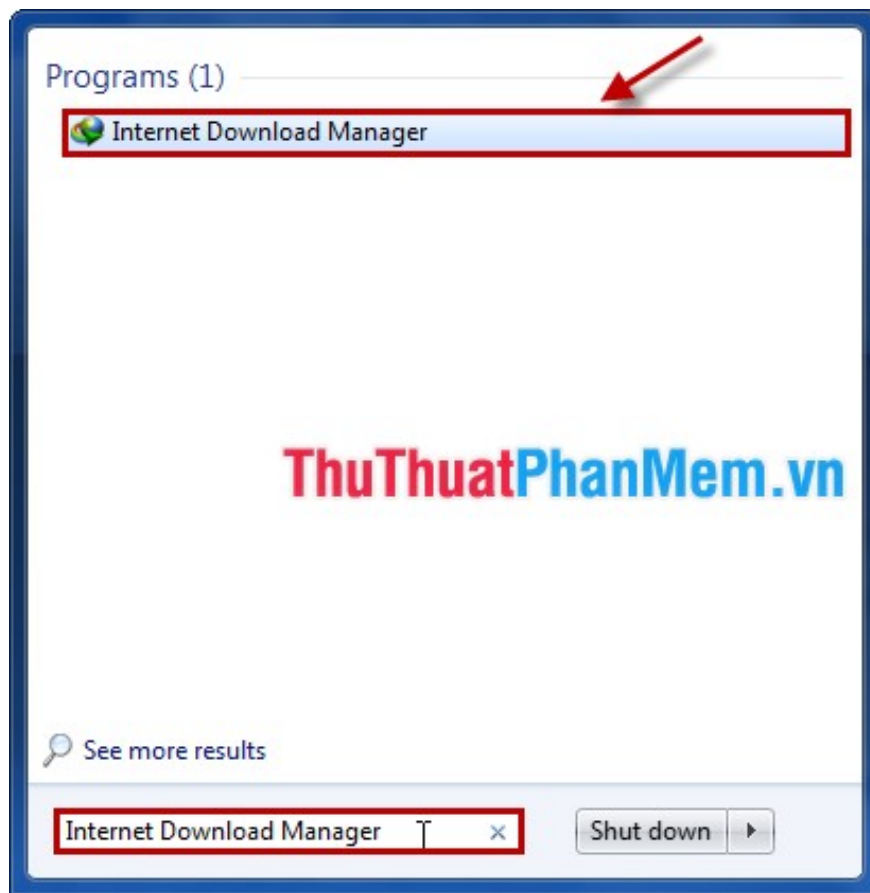

The default settings of IDM are not optimal to achieve the fastest download speed. You can set IDM to IDM to achieve maximum download speed.

The following article guides you to increase the download speed of IDM.

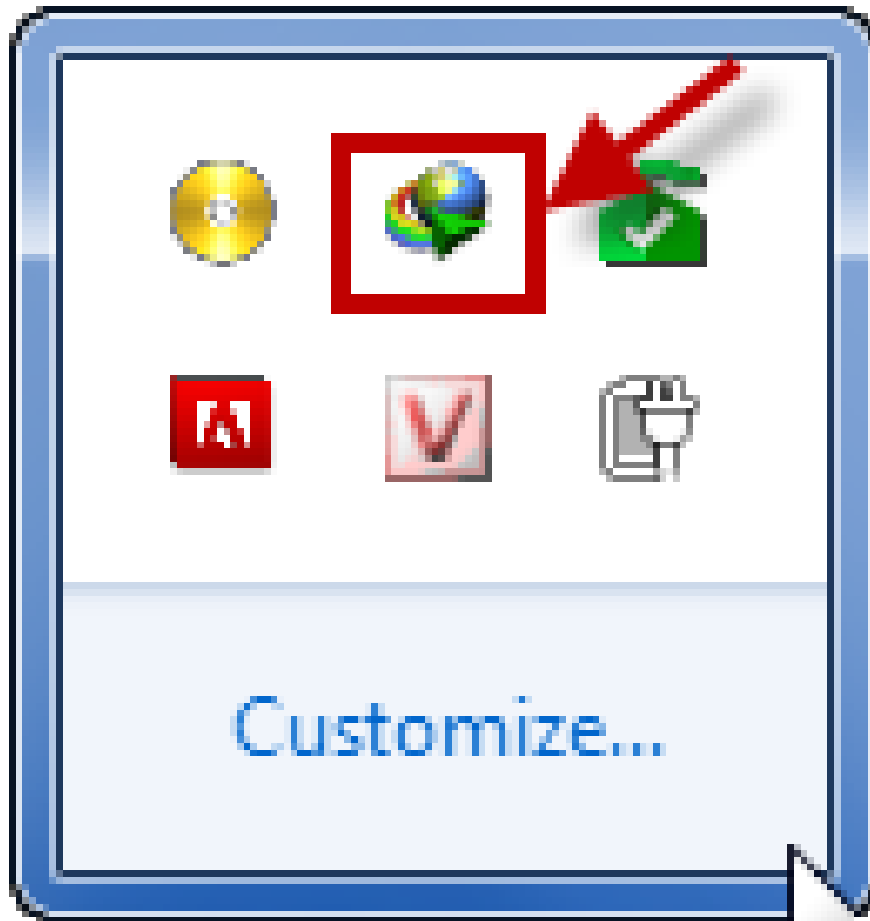

Increase download speed with the latest version of IDM

Step 1: Open the Internet Download Manager interface.

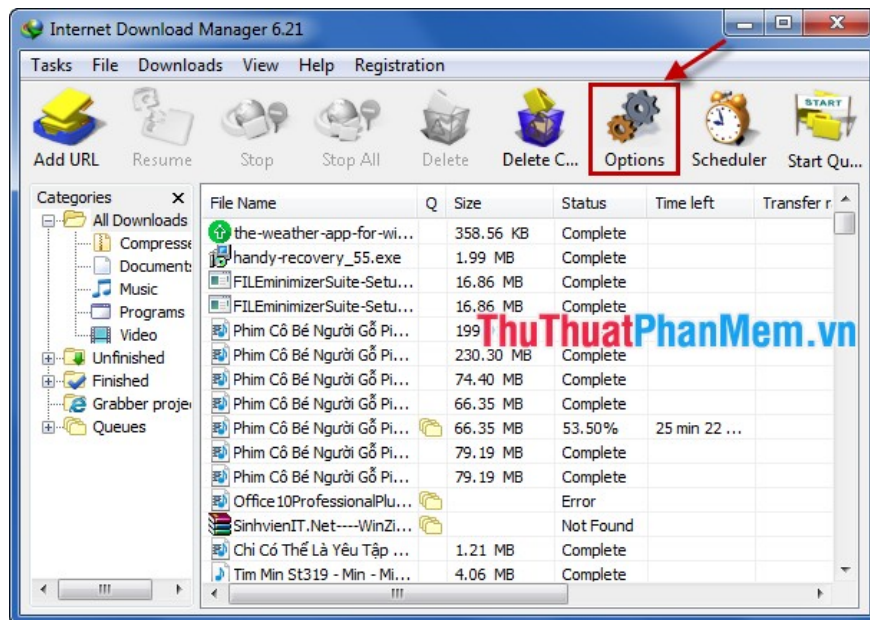

Method 1: Click **Start Menu** , enter *Internet Download Manager* keyword into the *Search programs and files* search box and select **Internet Download Manager** .

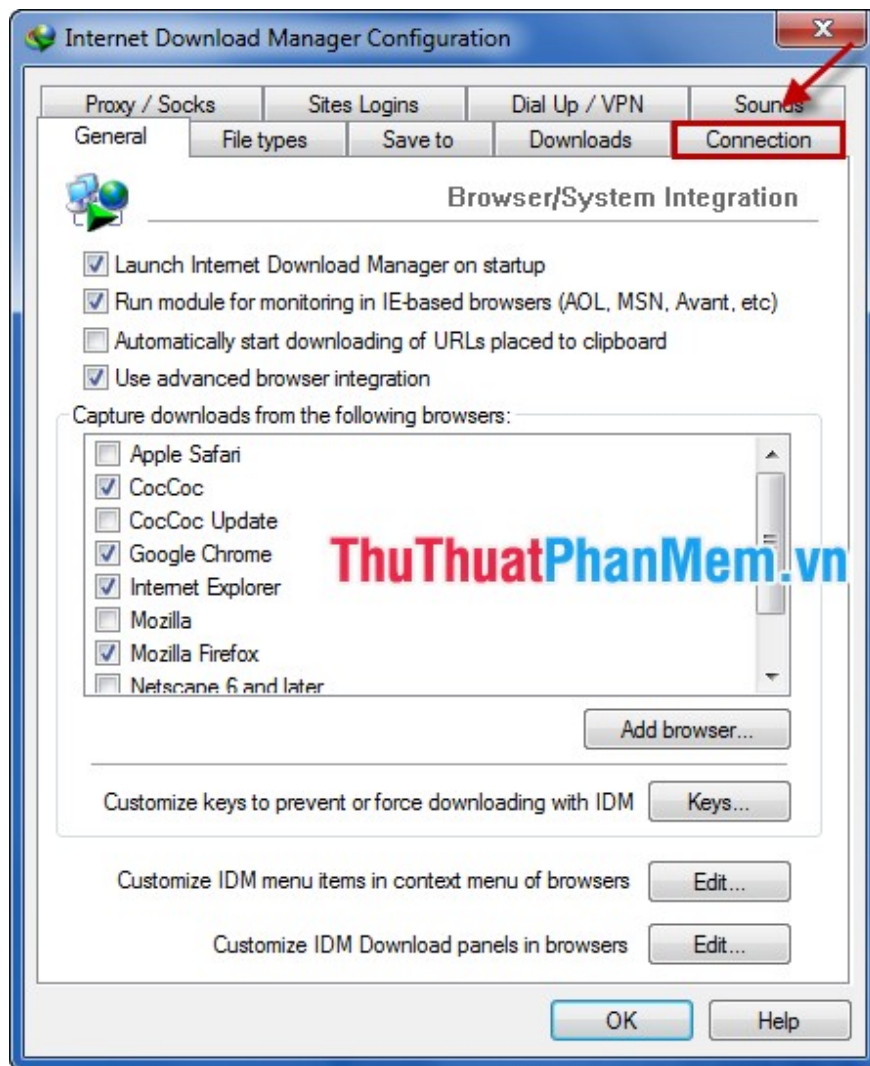

Method 2: Double click on the Internet Download Manager icon under the system tray of the computer (if you let IDM start with Windows).

Step 2: On the IDM interface, select **Options** .

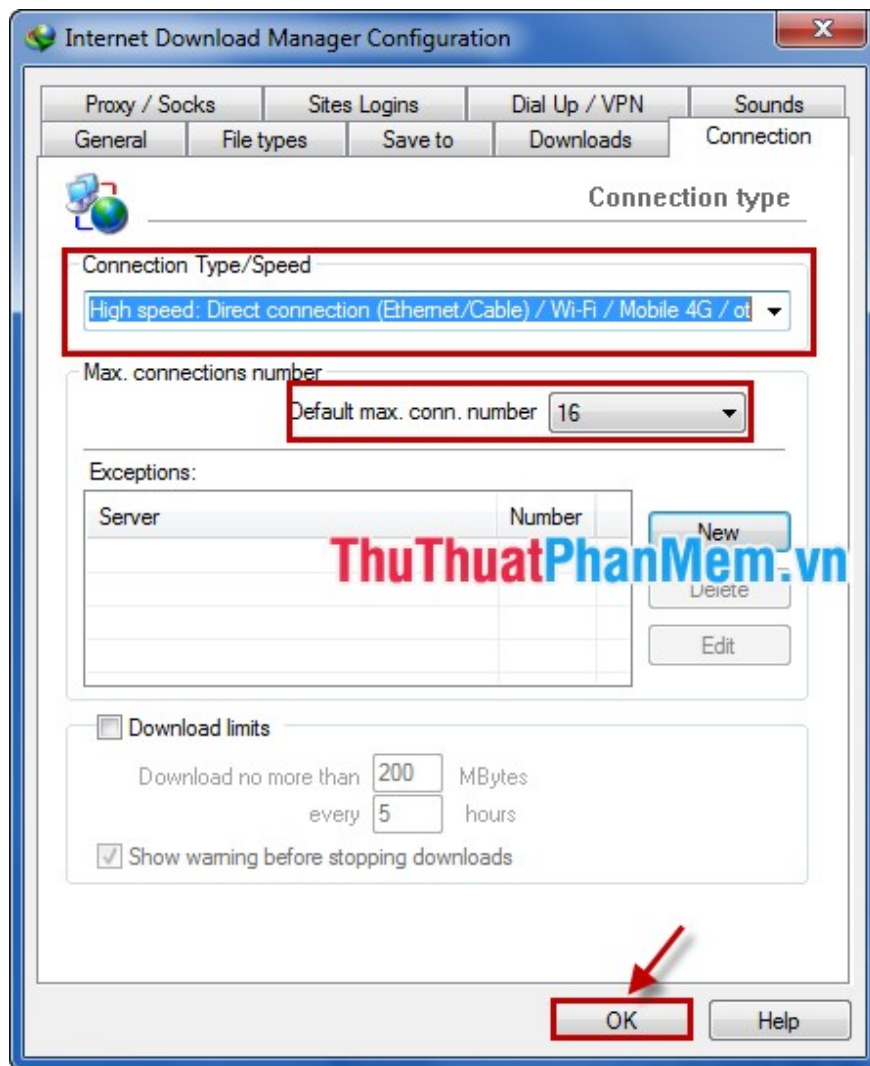

Step 3: In the **Internet Download Manager Configuration** window, select the **Connection** tab .

Step 4: Here you select **High Speed: Direct connection (Ethernet / Cable) / Wifi / Mobile 4G / other** under **Connection Type / Speed** .

In the **Default max section**, **I n. number** you choose 16 (default is 8). Then click **OK** to save the settings.

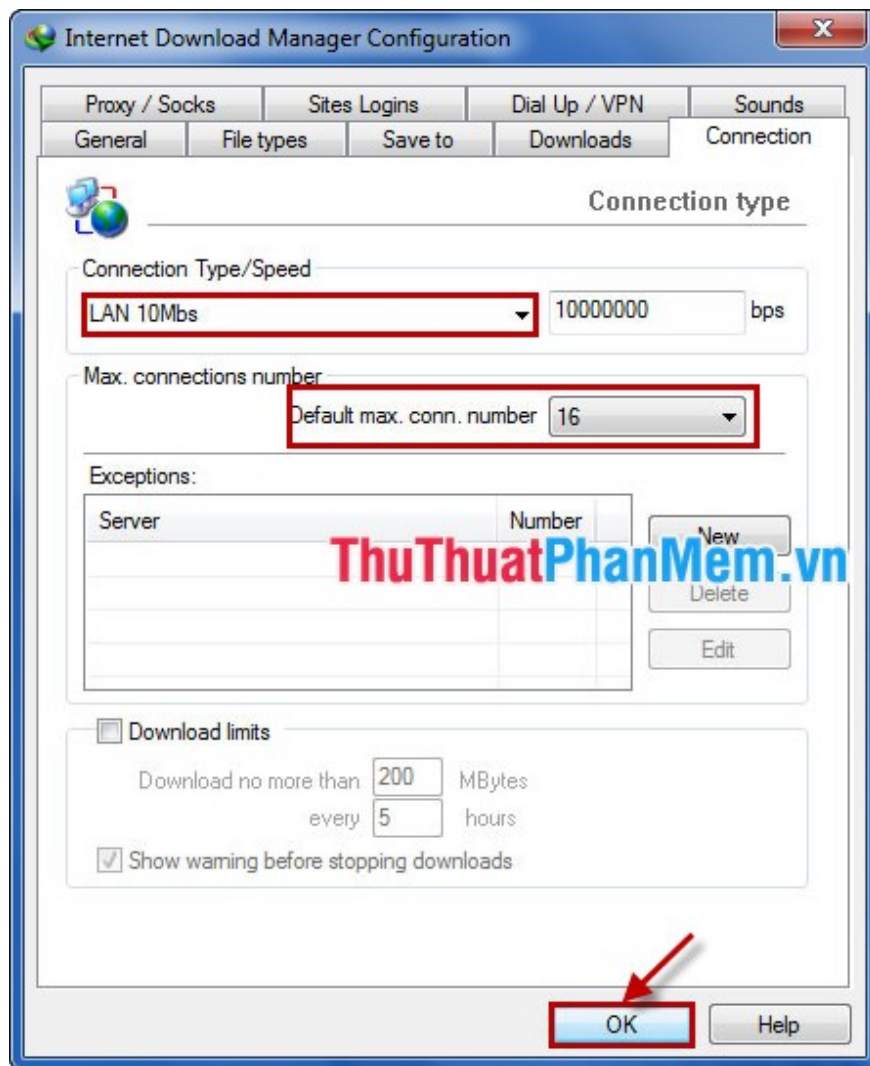

Increase download speed with older version of IDM

For older versions of IDM, follow the steps above to open the **Connection** tab in the **Internet Download Manager Configuration** window .

In the **Connection** tab you set as follows:

- In **Connection Type / Speed**, select LAN 10Mbs.
- **Default.max** section . **I n. number** you choose 16.

Then click **OK** to save the settings.

So, with these simple steps, you can increase the download speed of IDM, depending on the version of IDM you use that you set according to that version. Good luck!
