

Cut, merge video clips with the utility available in Windows

Without any other software, an amateur IT can still cut and hate video files with a utility available in Windows XP, Windows 7.

Without any other software, an amateur "IT" can still cut and hate video files with a utility available in Windows XP, Windows 7.

Windows Movie Maker will help you save and process great movies. You can start the program by going to **Start> Programs> Accessories> Windows Movie Maker** .

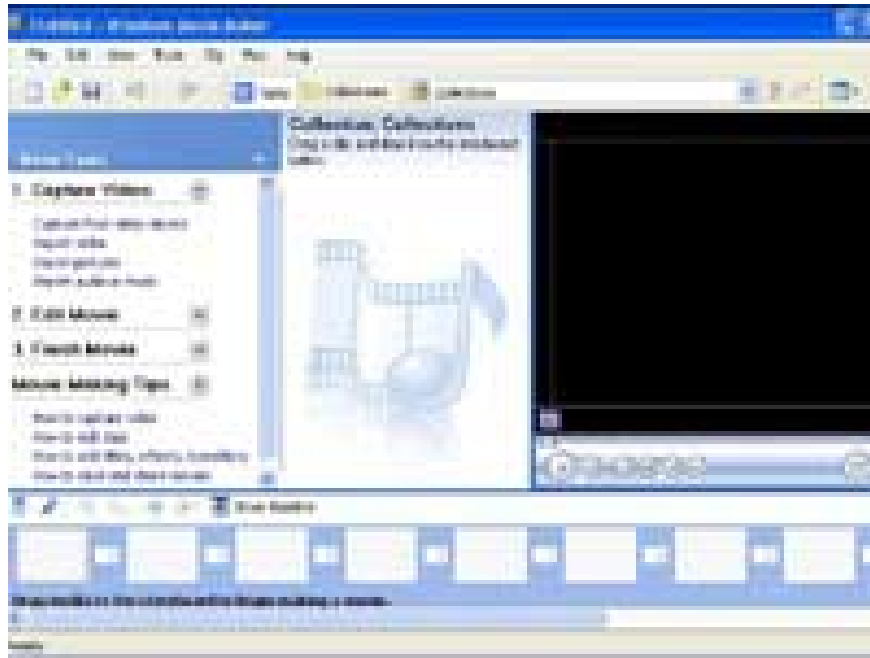

Or go to **Start> Run** . type: *moviemk.exe* and then type Enter.

Crop videos with Windows Movie Maker

To cut a movie file, follow these steps:

+ *Step 1* : Go to Menu File -> Import into Collections . put the path to the video file you want. Windows Movie Maker supports many formats of audio and movie like asf, au, avi, m1v, mp2, mp3, mpeg, wma, wmv .

+ *Step 2*: drag and release the small file to the StoryBoard / Time Line bar (at the bottom of the program window).

+ *Step 3* : Click from the top position (start cutting position) to the last position (end position) of the video clip you need to cut. Then click the Play button to preview the movie. If you feel that you are not qualified, you can use the Back button to redo.

+ *Step 4* : After cutting the video as you want, if you want to save it, go to Menu File -> Save Movie file.

For the option to export to a file, when Save Movie window appears, click on Setting, you can choose the quality is Low, Medium or High quality (Attention, the quality is higher, the volume is set. The bigger the news).

In the Display Information section, you fill in the title (Title), author (Author), Date (Date), description, note (Description) . After you have finished editing the settings, click OK and select the path. save file.

One thing to note is that Windows Movie Maker only supports saving movie files in WMV format.
