

# Data Recovery Wizard - The most powerful data recovery software

Data Recovery Wizard - Powerful data recovery software. There are quite a lot of software that supports data recovery but not all are good and effective. Therefore, this article introduces you to a software to recover data

In the course of using the computer, you have probably encountered a case of mistakenly deleting important data or a computer that has errors or virus infections that cause data loss. If you are in that situation, don't be too confused, we have a chance to recover those lost data using data recovery software. Currently on the market there are quite a lot of software supporting us to recover data, but not all are good and effective. Therefore in this article TipsMake.com would like to introduce to you a data recovery software that is rated as the most powerful user today, that software is called Data Recovery Wizard. Invite you to refer.

With Data Recovery Wizard, you can recover data lost due to various reasons, from the simplest of which is mistaken deletion to more complex causes such as hard drive partition errors, virus attacks, etc. Here are some advantages of the Data Recovery Wizard:

1. Data recovery due to various reasons.
2. Fast and safe recovery speed.
3. Can recover many types of file formats, on many hard drive formats.
4. Allows previewing file types before recovery.
5. There is a smart file filter to easily find lost files.
6. Modern easy-to-use interface.

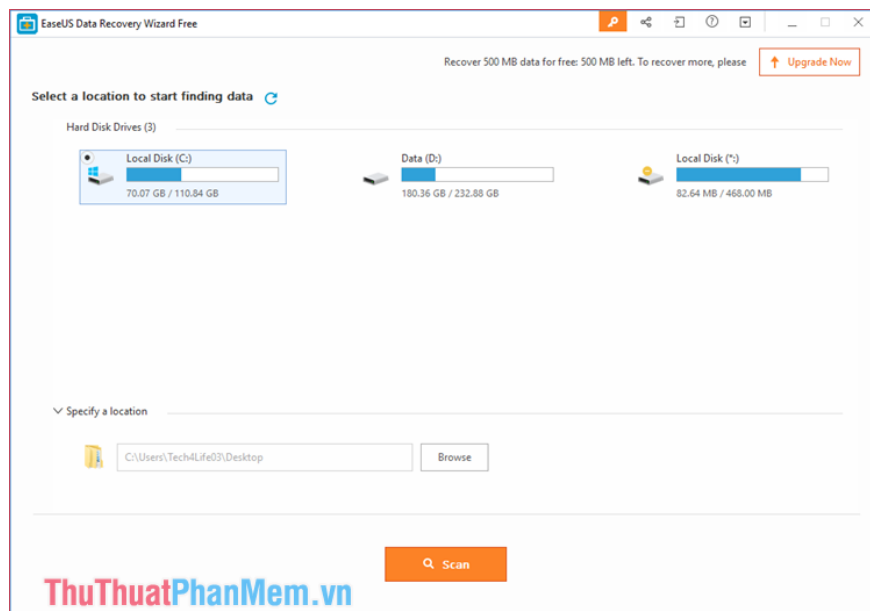

Data Recovery Wizard has both free and paid versions, if possible, please use the paid version you will be upgraded and have technical support from a lifetime publisher. If there is no condition, the free version is more than enough functions for us to use.

Link to download the software from the home page: <https://www.easeus.com/datarecoverywizard/free-data-recovery-software.htm>

Have you downloaded and double-click the file to install, the installation steps are simply the **Next** steps are done.

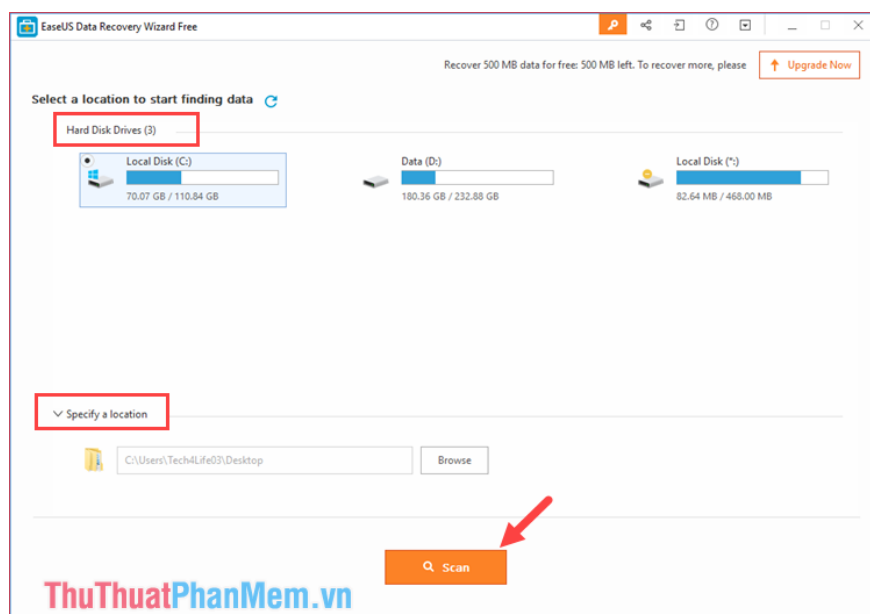

Below is the main interface of the software, looking through we can see the Data Recovery Wizard has a fairly simple but very modern and beautiful interface that makes it easy to use for even newcomers. contact first.

**Step 1:** On the main interface of the software there are 2 main items you need to pay attention:

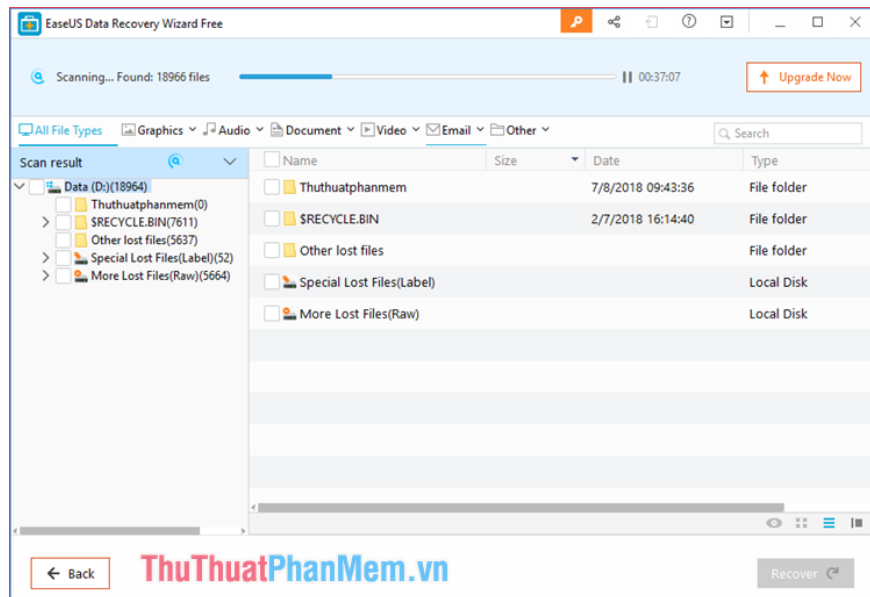

1. The first is the **Hard Disk Driver** section, which will list the hard drive partitions in your computer. Here you want to recover data on any hard drive partition, select that partition and click **Scan** and the software will scan both the drive partition and find deleted files.
2. The second is the **Specify a location section**, this is a function that helps you recover data in a certain folder you want. You just need to click **Browse**, then select the directory where the file was lost and then click **Scan** to let the software scan that folder.

Of course, scanning an entire partition will take longer than scanning a folder, so if you know exactly which folders are lost in a folder, you should choose the method that is directory scanning.

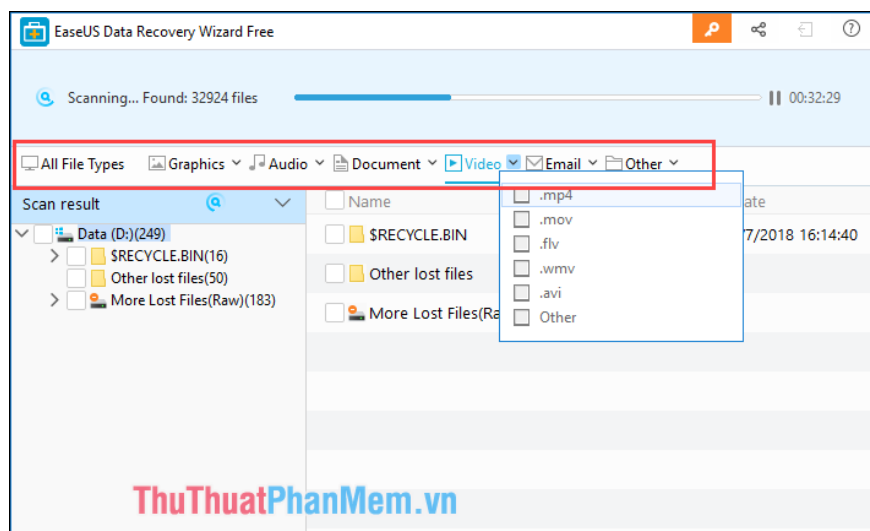

**Step 2 :** After selecting a location to scan data and clicking **Scan**, the software will start the memory scanning process to find lost files. The found files will appear on the main screen so you can easily find the exact data you

lost.

**Step 3:** You can use the software's file filter to easily find deleted data more accurately and quickly, The filter supports sorting files to find such as: **Graphics** (pictures), **Audio** , **Document** , **Video** , **Email** , **Other** (others).

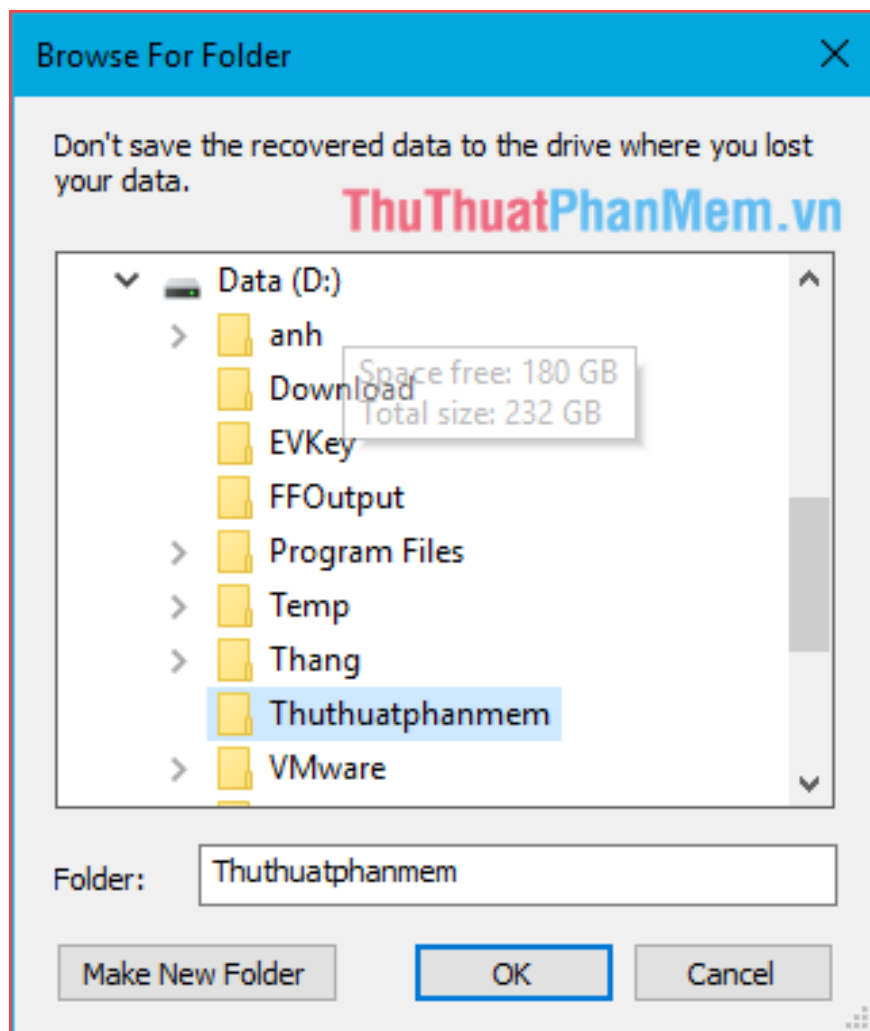

For example, if your lost data is video, then you can select video item, in video section you can choose file format such as .mp4, mov, flv.vv. Thus the software will only display the files found with video format and we will find it easier.

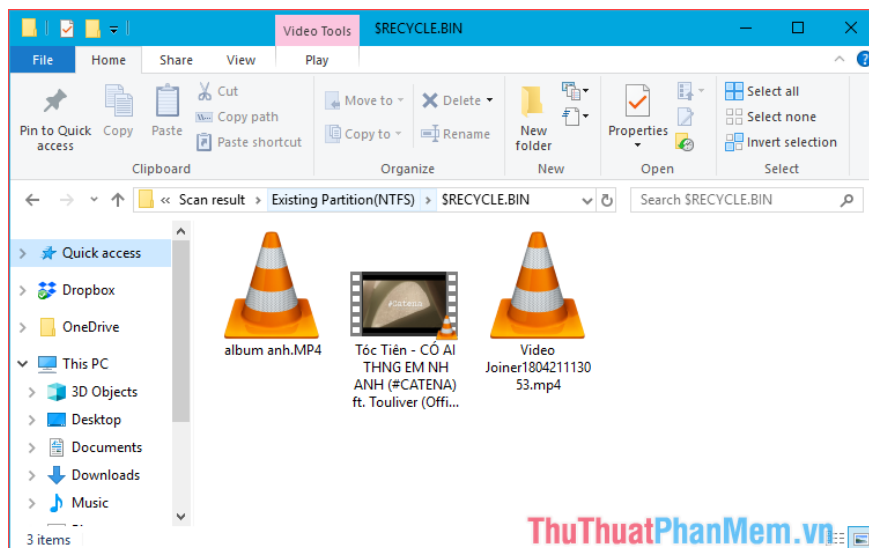

**Step 4 :** Once you've found the lost data file, select the file or folder you want to recover then click the **Recover** button.

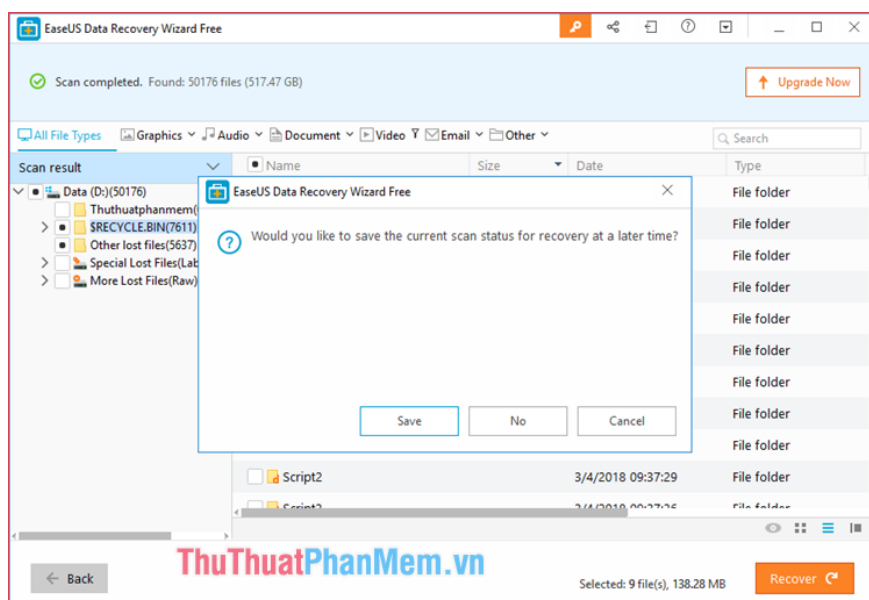

**Step 5** : A small window pops up for you to choose where to save the files after restore then click OK, if a message appears, click Save.

After the restore is complete, the software will automatically open the folder for you to view the recovered data:

Especially when you press Back to return to the main screen, the software will ask if you want to save the last data scan. If you save the data scanning process, you can later recover data in that partition without spending time to manually scan again:

Above is an introduction to Data Recovery Wizard, with the advantages and powerful features of this software, Data Recovery Wizard will be a good choice for you in case of data loss. You will not have to spend the effort and money to bring your computer or hard drive to the data recovery center again. If you have any questions about the Data Recovery Wizard, please leave a comment below the article, TipsMake.com will support you as much as possible.
