

Decode 6 magic tricks that challenge all the laws of physics in the world

With the bizarre magic tricks below, you will find them challenging all the laws of physics in this world, turning the impossible into possible.

With the bizarre magic tricks below, you will find them challenging all the laws of physics in this world, turning the impossible into possible.

1. Death challenge: Magician uses his mouth as a "red heart" to block bullets
2. 4 magnet experiments are more interesting than magic tricks that amaze you

1. Twist water "stand still" in mid-air

Unlike the normal water we still see, the water in the picture above flows in a spiral, and seems to stand still in mid-air.

The reason is that the person doing this experiment has attached the water source with a set of speakers. It was the sound wave that caused the water to turn into a spiral.

In addition, the sound waves here have almost the same frequency of vibration as the recording speed of the camcorder causing the brain to be fooled, the water flow is normal but the viewers feel the water seems to stop in the middle middle

2. Light candles from a distance
