

Decode strange symbols on air-conditioning controls

Find out the functions of some strange symbols on your air conditioner controller to know how to use the most efficient and economical electricity.

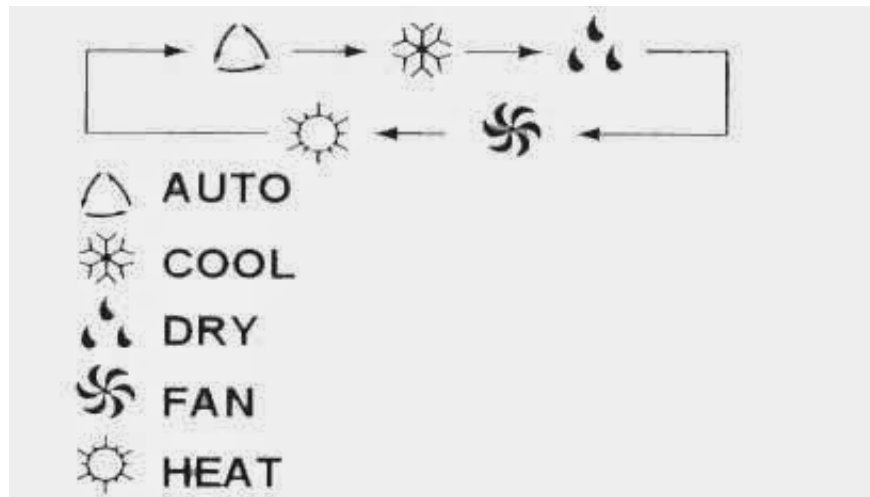

Most of us only know the simple symbols on the air conditioning control such as turning off, turning on, increasing or decreasing the temperature and some strange symbols, nobody knows what it is.

1. It is reasonable to turn off the air conditioner before going out
2. Mysteriously saving electricity with Dry mode on air conditioner

Find out the functions of some strange symbols on your air conditioner controller to know how to use the most efficient and economical electricity.

3 basic temperature functions Cool, Dry, Heat .

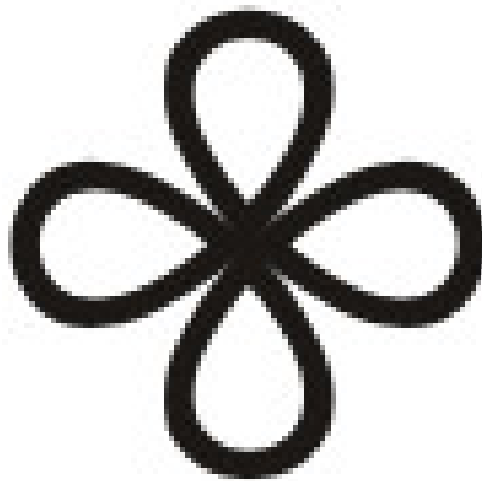

Cool (snowflake shape): cool mode.

Dry (water drop shape): dry mode. This function reduces the room temperature by reducing moisture.

Heat (Sun shape): heating mode, only with two-way air conditioner.

Auto: auto mode. In this mode, the screen will not show parameters, the air conditioner will automatically adjust: temperature, humidity, wind . depending on the surrounding environment conditions.

1. Symbol of the second propeller

Besides the usual fan icon, some modern air conditioners also have a second propeller icon, like the one above.

This is X-fan function. When this function is turned on, after turning off the air conditioner, the fan will still run for about 10 minutes, to dry the system and increase the service life of the device.

2. Icons of pine trees and houses

One of the most strange and confusing symbols of air conditioning is the symbol of pine trees. This is the symbol of Health function - only available on modern air conditioners, applying new technology.

This function activates the air ion machine in the air conditioner, which filters out dirt and even airborne viruses at the fastest speed.

Accompanying Health is the Scavenging function - usually attached to a button. This function gradually changes the air from outside to inside to purify the odor in the air. When the room temperature is higher than the outside temperature, Scavenging can also help to cool down faster than usual.

Basically, these two functions of conditioning are good for the health of users, but they are very power consuming.

Each air conditioner company will have its own function, want to know and use all the functions, you should read the user guide carefully before using.
