

Delete the IE7 browser deposit using the command line utility

If you want to create file files that can automatically cleanup your computer, you can use one of the following commands in a file script.

Network Administration - If you want to create file files that can automatically cleanup your computer, you can use one of the following commands in your file script. The advantage here is that you can automate any functions on the Internet Explorer 7 dialog box. Delete Browsing History.

This is the dialog you often see in Windows operating systems:

And these are commands that correspond to different nodes. The most important thing from the cleanup context, first of all, is to delete only temporary Internet files that are cluttering your computer.

To use these commands, you just need to run them from the command line, the vista search dialog or a file file.

Temporary Internet Files

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 8

Cookies

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 2

History

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 1

Data form

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 16

Passwords

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 32

Delete All

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 255

Delete All - "Không xóa b? các t?p tin và ??t t?p tin ?ã ??ng nh?p"

RunDll32.exe InetCpl.cpl, ClearMyTracksByProcess 4351

Note: these commands only work in Internet Explorer 7 on XP or Windows Vista operating systems.
