

Dell announced the new XPS 13 ultrabook

By late CES 2012, Dell's world-famous computer company Dell has brought the XPS 13 ultrabook model with elegant design, backlit keyboard and Intel Core i-series processor.

By late CES 2012, Dell's world-famous computer company Dell has brought the XPS 13 ultrabook model with elegant design, backlit keyboard and Intel Core i-series processor.

The \$ 999 ultrabook version of XPS 13 is equipped with a 128GB SSD drive, Intel Core-i3 processor. Configuration with Core i5 or i7 and 256GB SSD will also be available for customers' initial selection.

The computer has an aluminum exterior and carbon fiber material that makes it lightweight and overflowed and the 13.3-inch LCD screen. Ultrabook weighs 1.36kg with a 12-inch body, full size is 20.5 x 34.5 x 1.77cm.

Dell XPS 13 Ultrabook

The XPS 13's 300-nit display screen has a resolution of 1366 x 768 pixels with a LED backlight chiclet keyboard and a large glass touchpad. Dell claims the 47Wh battery of the device can provide 8 hours of continuous running for the device. The list of connection ports of the device is quite brief: one USB 3.0 port, one USB 2.0 port, and mini DisplayPort, no HDMI, Ethernet, or memory card reader.

The available Wi-Fi will help users update email, calendar, and other information, ready for work. It also has location recognition, so gadgets like weather and restaurant lists are updated as you move between cities.

Finally, Dell said, the new ultrabook XPS 13 model is not only for consumers, but also for IT departments in the enterprise. Other information about the computer will be updated in the nearest time.
