

Dell came out with Chromebook 11 using Core i3 chips

Following Acer, Dell also introduced a Chromebook using an Intel Core i3 Haswell chip at a recent event in Japan.

Following Acer, Dell also introduced a Chromebook using an Intel Core i3 Haswell chip at a recent event in Japan.

Dell's new laptop is actually a hardware-upgraded version from Dell Chromebook 11. Previously, Dell's Chromebook 11 provided business and education customers with the Intel Celeron 2955U Haswell chip. .

Other specifications include an 11.6-inch screen with a resolution of 1366 x 768 pixels, supporting WiFi 802.11n and Bluetooth 4.0. Dell also showed the battery life of the product up to 10 hours.

The new *Dell Chromebook 11* version is also equipped with a 720p webcam, 2 USB 3.0 ports, an SD card slot and an HDM port. Not only that, the product is also equipped with TPM security standard.

Dell said that the Celeron version will continue to be marketed. In addition, an upgraded version of Chromebook 11 with Core i3 CPU and 4 GB RAM is also on the way to consumers.
