With its stylish, unobtrusive square design, the well-equipped Precision M6500 is included in the current dream car: 1.6 GHz Intel Core i7 920XM Quad-Core Extreme, 17-inch LED display 1,920 x 1,200 pixel resolution and the terrible Nvidia Quadro FX 3800M video card. This is the first laptop version equipped with this card.

RAM on the Precision M6500 can plug up to 16 GB. It supports 3 different hard drives with a maximum capacity of 500 GB each, an SSD of 256 GB and an encrypted drive of 160 GB. You can also choose an integrated optical drive that is DVD or Blu-ray burner.

All latest life connections are also available for Dell's Precision M6500, such as Wi-Fi 802.11 b / g / n, Bluetooth 2.1, 3G and Ultra-Wideband (UWB). Besides, there are other standard connections such as VGA port, 4 USB ports, 8 in 1 card reader slot and a 2 or 3 million pixel webcam.

The Dell Precision M6500 is the first laptop to carry an Nvidia Quadro FX3800M graphics card

The Precision M6500 comes preinstalled with Windows 7 Ultimate (64bit version) or RedHat Enterprise Linux. Weighing 3.86 kg with a 9 cell battery, this pitiful laptop version has a starting price of \$ 2,749. Users will depend on the need for RAM, video card or operating system that will pay more or less.

In addition to the standard version, Dell also released a limited-edition orange aluminum casing M6500 Covet with an even bigger start price, up to \$ 4,219.
