

Dell launches the M102z, which runs AMD Fusion for \$ 699

After Sony and HP, Dell today also unveiled a new laptop model running AMD's Fusion platform processor. The M102z model is equipped with a 1.6GHz AMD E-350 processor and Radeon HD 6310 graphics card ...

Dell's new model has a design that is not much different from the previous M101z model.

Dell M102z.

After Sony and HP, Dell today also unveiled a new laptop model running AMD's Fusion platform processor. The **M102z** model is equipped with a **1.6GHz** AMD E-350 processor and Radeon HD 6310 graphics card, 4GB of RAM. It has an 11.6-inch screen with a resolution of 1,366 x 768 pixels.

The above configuration version is available for USD 699 or USD 759 if the user has the option of watching digital TV television.

M102z is also available with Dell's other cheaper configuration option for \$ 599. This version includes 1 GHz AMD Fusion C-50 processor, AMD Radeon HD 6250 graphics chip and 2GB RAM.

Laptops running AMD Fusion are not available at the moment. In Vietnam market, only Sony Vaio YB uses this platform and currently costs about 12 million VND.
