

Dell presents the world's thinnest laptop

Yesterday (October 5), Dell officially launched the premium Adamo XPS version of its previously successful Adamo ultraportable laptop line.

Yesterday (October 5), Dell officially launched the premium Adamo XPS version of its previously successful Adamo ultraportable laptop line. The new product is priced similar to the high-end MacBook Air.

>>> Open the world's thinnest laptop box

The product is rated as the world's thinnest laptop with only 0.39-inch thinnest point, thinner than Apple's ultra-thin MacBook (0.76-inch), even more than the Adamo (0, 65-inch). The reason Dell can create such a super thin masterpiece is because the company has placed most of the computer components in the lower part of the screen and creates a fold when opening the device.

When you open the device, the part below the screen of the Adamo XPS will give the device a very convenient appearance for users to type. Furthermore, the product is removable, equipped with two USB ports, DisplayPort output port and is lighter in weight than Apple's MacBook Air with a weight of 1.45kg.

Although branded XPS, the new Adamo version has lower performance than Adamo 13. It is equipped with a super-energy-efficient Core 2 Duo processor with clock speeds of 1.4GHz, 4GB of RAM and 128GB of hard drive Solid (SSD). However, the ultra-slim size of the Adamo XPS only allows the device to operate continuously for 2 hours on a 3-cell battery. Users can purchase extra batteries to increase their usage time to 5.25 hours. The Adamo XPS is equipped with NVIDIA graphics capabilities, and has faster processing speeds than previous Intel hardware.

However, Dell has not yet announced the official release date of this product during the year-end holiday season. The price of the product may be \$ 1799, almost the same price as the high-end MacBook Air (2.13GHz Core 2 Duo S chip, 5-hour battery).
