

Dell 'quickly' upgraded the new Core i7 chip

Two new processors from Dell include hardware options for their laptops, the Intel Core i7-740QM and i7-840QM.

Two new processors from Dell include hardware options for their laptops, the Intel Core i7-740QM and i7-840QM.

Dell often causes "fever" for users when making hardware options on the website, though not yet officially introduced. This time is no exception when the company put on the list of processors for its laptop series two models are Intel Core i7-740QM and Core i7-840QM chips.

Optional processor chip on Dell models.

The role of this processor has not even been officially confirmed by Intel, but according to the information provided by Dell, the i7-740QM and i7-840QM chips will be the replacement for the Core i7- processor generations. x20QM before. The new processor system keeps the cache and 8 processing channels intact. However, when using Turbo Boost technology, the Core i7-840QM chip can reach a maximum speed of 3.2 GHz.

Another interesting thing is that the price for this new Core i7-740QM chip option is even lower than its predecessor brother.
