

DemoCreator - Professional screen recording and video creation tool

Wondershare DemoCreator is an all-in-one tool to record screen and create professional videos quickly and easily.

When it comes to editing and creating videos, there are a lot of different options. Knowing what tools to choose to achieve greater success is a difficult task. However, with the slew of new features that come with DemoCreator 8.0, making the decision just got a little easier.

What is DemoCreator?

Wondershare DemoCreator is an all-in-one tool to record screen and create professional videos quickly and easily. This program comes with a ton of different features, all focused on trying to make video creation a simpler and more accessible process than ever before.

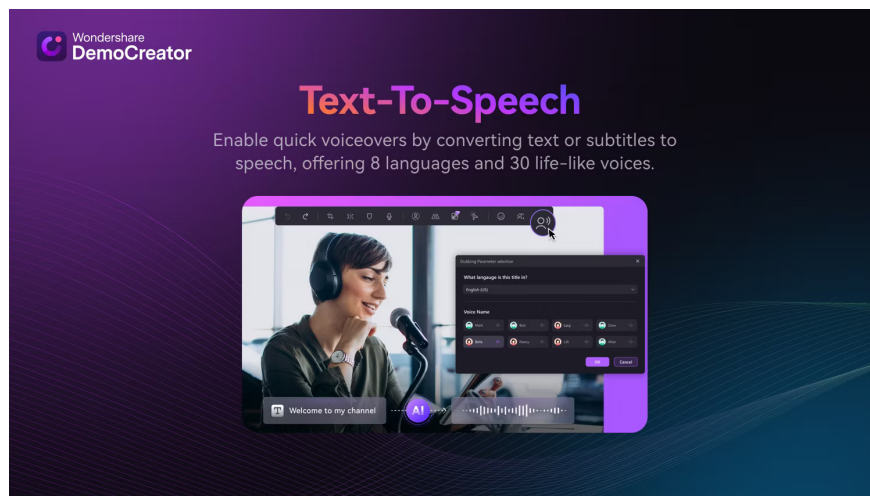

Best of all, DemoCreator continuously receives updates that improve and add new features to the software all the time. The most recent update, DemoCreator 8.0, introduced a host of new features.

What's new in the Democreator 8.0 update?

DemoCreator's most notable changes in update 8.0 are the changes to the user interface. If you've used DemoCreator regularly in the past, you'll notice that the user interface has been revamped from the ground up to deliver a more seamless experience than ever before.

There are also a large number of new additions to DemoCreator, such as new visual content and tools that make creating and editing engaging videos easier than ever.

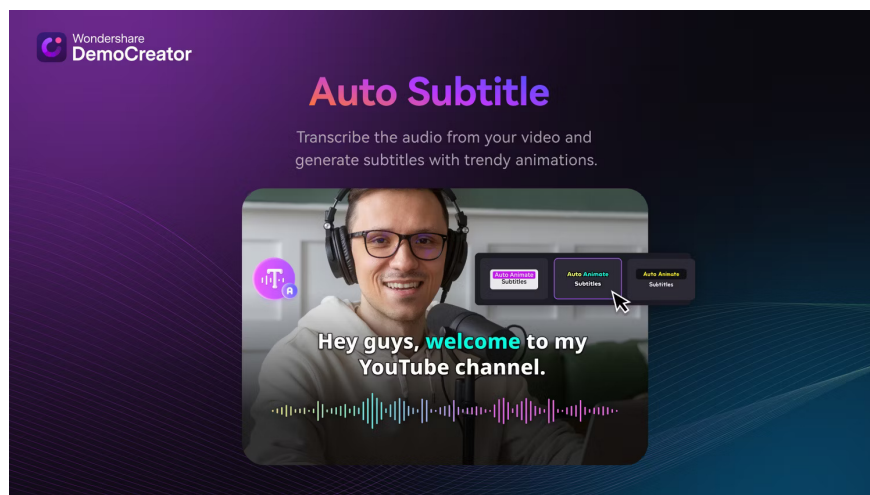

Integrated text-to-speech feature

DemoCreator 8.0 offers integrated AI text-to-speech technology. This technology automatically analyzes any text you present and generates voice in over 10 different languages.

The whole process is extremely quick and comes with over 120 different realistic voices to choose from.

Automatic subtitles

Additionally, DemoCreator 8.0 introduces over 30 different automatic captioning options to take any video to the next level.

Let's say you have a podcast that already has some subtitles, but you don't think they attract enough interest. Typically, you have to do it yourself, manually animating the subtitles to sync them with what the people in the video are saying. With DemoCreator 8.0, this is no longer a problem.

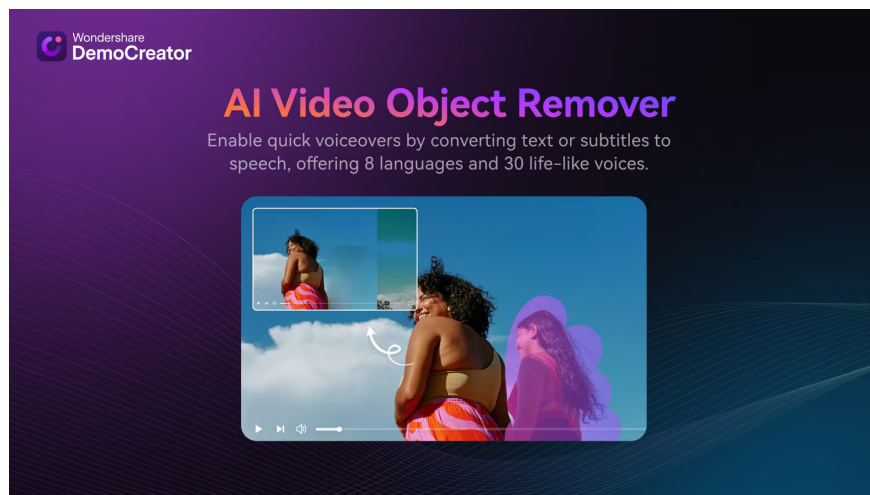

Now you have access to subtitles in a variety of styles, all animated automatically. These subtitles highlight whatever words are currently being spoken in the video, with different animations based on the chosen style. This can also be done for any animation, including those created with text-to-speech, those written manually, or any animations that are uploaded via SRT file.

AI voice changer

If you've ever wanted to create a video with different voices but didn't have anyone to help, DemoCreator 8.0 is here to help. Thanks to the new AI voice change feature built into the program, you can easily change your voice to one of over 40 different options in multiple languages.

Let's say you're trying to dub a video but there are multiple speakers. Normally, you'd have to find someone else to come in and record their own parts, but now thanks to AI Voice Changer in DemoCreator, you can handle it all yourself.

Remove AI object

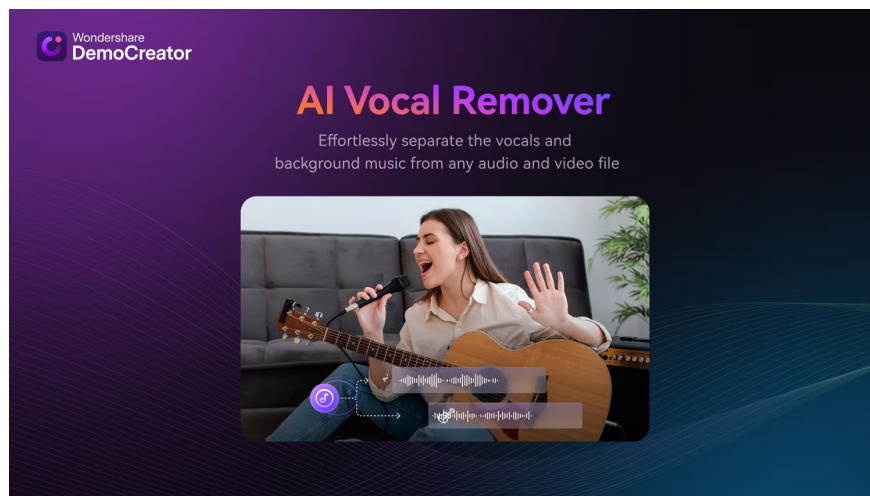

Have you ever shot a video and then found out that a little thing actually ruined it? Suppose an unwanted person or item in the background, even a watermark or icon.

Deleting them manually can be difficult or even impossible. That's where DemoCreator 8.0's AI object deletion feature comes into play. All you need to do is drag a frame over any unwanted elements present in the video, which can include as many or as few elements as you want.

From there, DemoCreator handles the rest, automatically selecting and deleting objects and intelligently replacing remaining space depending on the content in the background.

AI voice removal tool

Likewise, if there is anything in the video's audio that you don't like, you can understand how difficult it is to remove the audio.

Luckily, DemoCreator 8.0 can handle that too. This AI voice removal tool is capable of separating audio into two separate tracks. This means you can now easily separate the singer's voice from the instruments behind it.

What's really impressive about this feature is that you can use it to isolate non-music sounds. For example, in a busy environment with a lot of background noise, you can use AI Vocal Remover to separate words spoken in conversation from the background. From there, you can edit or remove background noise as you see fit.

AI beauty filter

If you're having a bad skin day or don't feel confident about your appearance for any reason, DemoCreator 8.0 has also added 6 new AI beauty filters that you can apply to any video. How to change the appearance of yourself or someone else.

These 6 filters are the smoothing filter that helps remove blemishes and imperfections, the whitening filter that brightens the skin, the face slimming filter that helps clear your face, the wrinkle removal filter that smoothes the skin, a contouring filter to enhance natural texture and a skin-smoothing filter to subtly enhance natural beauty.

All six filters can be further tweaked based on the effect you want to achieve, giving you great control over how you appear on camera.

New templates

One of the important new features of DemoCreator 8.0 is the introduction of video templates. These templates act as a new way to solve the difficult part of creating interesting, attention-grabbing videos not only quickly but also easily.

These templates use split-screen technology to display digital and recorded content side by side in a way that not only looks natural but also attractive. This is especially useful for online business or education applications, where providing information and having your own voice can be especially useful.

Introducing branded kits

Similar to the new templates added to DemoCreator 8.0, brand kits are like templates you create for your own brand to use and reuse as you see fit. These branding kits are a series of openings, end credits, and logos that you upload and save yourself.

From there, these branding kits can be applied with just one click to ensure that you achieve brand consistency across all output.

Upgrade inside

In addition to all these new features, DemoCreator 8.0 also comes with quite a few changes under the hood. These changes come in the form of 50% faster video rendering and 200% faster export speeds.
